Learning event plan

4

Use the format in table beneath to structure the content for a learning event. This provides guidelines for drawing up a facilitation plan in preparation for a presentation. An example of a facilitation plan is indicated in the next table.

Introduction	
Topic	♦ Select a suitable topic. ♦ Introduce the topic verbally. ♦ Display the topic visually.
Interest stimulus	♦ The aim of the interest stimulus is to obtain the learners' interest in the topic under discussion. ♦
Outcomes	♦ The outcome(s) state what the learners should be able to do after the learning event. ♦ Display the outcomes visually. ♦
Scope	♦ The scope of the presentation consists of all the main headings which will be covered in the theory lesson. ♦ Display the scope visually. ♦ Present the scope in a logical sequence. ♦
Importance	♦ The importance of the theory lesson must be stressed so that the learners realize how they will benefit by attending it. ♦
Ground rules	♦ The aim of establishing ground rules is to allow the learners to produce their own set of rules. ♦ Allow the learners to commit themselves to the ground rules by doing an observable activity. ♦
Physical environment	♦ The physical environment must be effective for learning. It includes aspects such as seating arrangement and equipment. ♦

Contents (Body)

Scope point no 1

The first scope point of the presentation will now be discussed in detail. Cover the rest of the scope points one by one.

- Establish a positive relationship with the learners (e.g. professional behavior).
- Indicate throughout the presentation which scope point is being discussed.
- Use at **least two relevant learning aids** (e.g. video, posters).
- The learning aids must support the theory.
- Present the theory lesson on the level of the target group.
- Explain the theory component by making use of appropriate examples.
- Allow the learners to ask questions or to comment.
- Apply effective verbal communication skills (e.g. speak loud enough, vary tone of voice).
- Apply effective non verbal communication skills (e.g. avoid irritating gestures, keep eye contact).
- Apply effective micro-skills (e.g. active listening, paraphrasing, summarizing).
- Control breathing so that voice usage is not affected by shortness of breath.
- Obtain maximum learner participation by including activities and group discussions.
- Keep control over disruptive influences (e.g. learners are not allowed to make unsuitable remarks and comments).
- Allow time for learners to ask questions during the presentation.

Closure

Summary

Questions

Assess

Interest stimulus

Summary

- ♦ Ask questions that are relevant to the outcomes stated.
 - ♦ Use different types of questions (e.g. close-ended, open-ended).
 - ♦ Avoid the use of questions such as leading, subjective, double-barreled etc.
 - ♦ Direct the questions to all the learners, instead of individuals.
 - ♦ Reinforce the questions and answers of the learners.
 - ♦ Provide positive feedback in time.
 - ♦ Allow activities to be performed to enable learners to reflect on the content.
 - ♦ Apply the theory to the practical situation (e.g. giving an example).
-
- ♦ Assess the learners by asking well selected questions concerning all the important aspects.

(It is very important that these questions are formulated in your planning phase and written into your presentation plan. It is thus determined whether the learners have achieved the outcome(s) of the theory lesson.)

- ♦ If there is a forthcoming presentation an interest stimulus must also be given to stimulate the interest of the learners for the next theory lesson.

Date: _____

Please give your honest reaction and comments. Mark the appropriate answer with an X

		Disagree	Neutral	Agree
LEARNING PROGRAM				
1.	The learning material is neatly compiled.			
2.	I received all the learning material in time.			
3.	The module content addressed my learning needs.			
4.	The exercises in the module enabled me to understand the theory.			
5.	The self assessments in the module enabled me to reach the stated outcomes.			
6.	The written assignment enabled me to master the content.			
7.	I could apply the theory into my work environment.			
LEARNING ENVIRONMENT				
8.	The venues were adequately prepared.			
9.	Suitable learning aids were used.			
LEARNING FACILITATORS				
10.	The learning facilitators demonstrated courteous behavior during training.			
11.	The learning facilitators were supportive towards me.			
12.	The learning facilitators appeared knowledgeable on the subject.			
13.	The learning facilitators demonstrated effective facilitation skills.			
14.	Enough time was allocated for me to practice facilitation skills.			
15.	I received adequate feedback on the progress that I made.

Unit Standard	123-127

1. Introduction

This learning program is part of a complete qualification. For more details concerning the complete qualification please contact your service provider or alternatively the office of the SASSETA

2. Purpose of this learning program

The purpose of this unit standard is to equip learners with the necessary skill, knowledge and attributes that will enable them to man an access control point. They will also be able to execute access control duties in a manner that will contribute towards the safety of an organisation or environment. The competencies outlined in this unit standard will also lead to the minimizing of physical losses for an organisation. This unit standard will enable security personnel who are working at an access control point to control vehicles, goods and persons as they enter or leave the security area with the ultimate purposes of safeguarding the organisation against external threat and potential losses.

A person credited with this unit standard will be able to:

- ♦ Explain access and egress control functions.
- ♦ Control people, vehicles and materials at an access and egress control point.
- ♦ Search people, goods and vehicles.
- ♦ Escort authorised persons and vehicles.

2.1 Target group

This program is compiled for the following **target group**:

- Security members
- South African Defense Force members
- South African Police Force members
- Correctional Services
- Individuals who wishes to complete the NQF level 3 National Certificate in security practices.

3. Standards and qualifications

It is important that you as the learner understand and realize that this training program is not presented in isolation, but that it was developed based upon nationally recognized standards known as unit standards.

Unit standards are the “building blocks” of qualifications. All qualifications are plotted on the National Qualifications Framework (NQF).

REMEMBER.....

Unit standards comprises of outcomes. An outcome is a statement that describes the required competency that must be demonstrated by the learner on successful completion of a training intervention.

4. Assessments

In order to assess whether a learner can actually demonstrate the desired outcomes, assessment criteria are included in the unit standard. Each outcome has its own set of assessment criteria.

REMEMBER.....

The assessment criteria describe the evidence that is needed that will show that the learner has demonstrated the outcome correctly.

Kindly refer to the unit standard attached hereto for the assessment criteria.

It is of utmost importance that the learner fully understands the assessment criteria as listed in the unit standard, as it is the only way in which the learner will know what he will be assessed against.

The **final or summative assessment** is the most important aspect of this training program. It is during this process that the learner will be declared competent or not yet competent.

The learner will know exactly how he will be assessed, and when and where he will be assessed. All of these details must be obtained from the training provider where the learner enrolled for his program.

5. Range statements

REMEMBER.....

Also included in the unit standard are the range statements in support of the assessment criteria.

The range statements indicate detailed requirements of the assessment criteria.

6. The learning guide

The learner guide is included in this material under various learning units. The learner guide has been designed in such a manner that the learner is guided in a logical way through the learning material and requirements of the unit standard.

On completion of this skill program, the learner will be assessed against the assessment criteria as stipulated in the unit standard.

Each of the modules consists of learner outcomes to be achieved during training and development interventions, work related experience or at your own time. The learner outcomes will enable you to achieve the required level of confidence and competence in order to undergo the summative (final evaluations) assessment.

The learner needs to assess his own knowledge and skill throughout the training process by completing the learner workbook. With the completion of the workbook you start collecting evidence to proof your competence. The learner workbook will be assessed (FORMATIVE ASSESSMENT)

TAKE NOTE

The learner guide will remain the property of the learner once the LEARNING PROGRAM has been completed.

TAKE NOTE

- The best results will be obtained if you start with Study Unit 1 in the Learner Guide, and work your way through it, study unit by study unit.
- All learning outcomes are vital and must be studied (and exercised for all practical requirements) thoroughly to ensure that enough evidence for all specific outcomes is generated.

7. Learning assumed to be in place

It is assumed that a learner which registers for this program have completed a program in communication at NQF Level 3 or equivalent.

It is imperative to understand that this program are only one of the building blocks to complete Skills program 1 The complete list of unit standards for Skills program appears on the next page.

7.1 Security program matrix

SKILLS PROGRAM 1: SASSETA E			
244177	Conduct a security patrol in area of responsibility	Level 3	7 Credits
244184	Apply legal aspects in a security environment	Level 3	8 Credits
244176	Use security equipment	Level 2	2 Credits
244179	Handle complaints and problems	Level 3	6 Credits
244181	Perform hand over and take over responsibilities	Level 3	2 Credits
244182	Give evidence in court	Level 3	4 Credits
12484	Perform basic fire fighting	Level 2	4 Credits
116534	Carry out basic first aid treatment in the work-place	Level 3	2 Credits

Patrol Security officer/Grade E

SKILLS PROGRAM 2: SASSETA D			
244189	Conduct access and egress control	Level 4	7 Credits
242825	Conduct evacuations and emergency drills	Level 4	4 Credits
11505	Identify, handle and defuse security related conflict	Level 4	12 Credits
117705	Demonstrate knowledge of the Firearms Control Act 2000 (Act No. 60 of 2000)	Level 3	3 Credits
113924	Apply basic business ethics in a work environment	Level 2	2 Credits
119465	Write/present/sign texts for a range of communicative contexts	Level 3	5 Credits
114979	Operate a computer workstation in a business environment	Level 3	2 Credits

Access control officer/Grade D

SKILLS PROGRAM 3: SASSETA C			
113909	Coach a team member in order to enhance individual performance in work environment	Level 3	5 Credits
13912	Apply knowledge of self and team in order to develop a plan to enhance team performance	Level 3	5 Credits
244578	Describe how to manage reactions arising from a traumatic event	Level 3	2 Credits
113852	Apply occupational health, safety and environmental principles	Level 3	10 Credits
13936	Outline the legal environment of a selected industry	Level 3	2 Credits
119472	Accommodate audience and context needs in oral/signed communication	Level 3	5 Credits
11508	Write security reports and take statements	Level 4	10 Credits

Asset & reaction officer/Grade C

8. Preparation of summative assessment

After you have worked through the **LEARNER GUIDE** and you are satisfied that all theoretical and practical requirements/ evidence, as stipulated by the UNIT STANDARD, can be met, you need to make your own necessary arrangements with the assessor and/ or facilitator. The training establishment will then arrange a suitable date for you to attend your pre-assessment meeting and then arrange for a suitable date to complete the final assessment.

8.1 RPL assessment

The assessment of RPL learners will be conducted in the same way as for those of new learners. The assessment pack is exactly the same and will therefore be used for new learners as well as RPL Learners. It must however be noted that learners who are applying for RPL must provide proof of previous learning and subject related experience prior to the assessment.

This proof or evidence can be in the format of certified copies (certificates) of previous learning programs that have been attended.

All the evidence will be assessed and authenticated before a learner will be allowed to enroll for an RPL program.

9. Roles and responsibilities

9.1 Facilitator/instructor

- Prepare to facilitate.
- Transfer of knowledge and skills

9.2 The role of the assessor

- Plan for the assessment
- Prepare the learner for the assessment

9.3 The role of the Learner

- Prepare for assessment.
- Accept the responsibility of learning.
- Accept the responsibility to produce/deliver evidence.

STUDY UNIT 1

ACCESS AND EGRESS CONTROL

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Define access control
- ♦ Explain the purpose for access control
- ♦ Explain the objectives of access control and egress control
- ♦ Explain the meaning of outer layer protection
- ♦ Identify and demonstrate knowledge and skills in the use of the various access control methods/aids.
- ♦ Identify and demonstrate knowledge and skills in the use of the various access control identification system.
- ♦ Explain the relation between access control measures and internal and external threats.
- ♦ Explain the role of access control in the event of an emergency.
- ♦

1. Introduction

DEFINITION

In physical security, the term access control refers to the practice of restricting entrance to a property, a building, or a room to authorized persons. Physical access control can be achieved by a human (a guard, bouncer, or receptionist), through mechanical means such as locks and keys, or through technological means such as access control systems.

Physical access control is a matter of who, where, and when. An access control system determines who is allowed to enter or exit, where they are allowed to exit or enter, and when they are allowed to enter or exit.

Historically this was partially accomplished through keys and locks. When a door is locked only someone with a key can enter through the door depending on how the lock is configured.

Mechanical locks and keys do not allow restriction of the key holder to specific times or dates. Mechanical locks and keys do not provide records of the key used on any specific door and the keys can be easily copied or transferred to an unauthorized person. When a mechanical key is lost or the key holder is no longer authorized to use the protected area, the locks must re-keyed.

2. The purpose of access control and egress control functions.

Just as every building has its own personality, each building also has its own unique movement control requirements. Failure to recognise this element of facility control can be not only expensive, but also disastrous. As security managers review the loss potential of their buildings, consideration must be given to the movement and control of people within its confines. An access and egress control system designed to complement the manufacturing procedures will go a long way towards reducing losses and making the other protective systems efficient and cost effective. Management directives and policies are designed to meet a variety of conditions. The access control system must show this same flexibility in order to provide predictable regulation and monitoring of the movement of people and access (Cherry 1986: 157).

Control of access to specific areas within a building is particularly important where the general public is admitted. Generally speaking, it is not necessary to install walls, partitions, doors or windows to the same high security specifications that apply at the perimeter of the building. Mechanical combination locks, or electrolocks operated by personal codes or access control cards and fitted to standard doors will normally suffice in maintaining a "need to be here" principle. One exception to this arises where the general public interfaces with employees who have direct access to substantial amounts of cash or valuables. In such cases there is an additional risk (Hearnden & Moore 1996:48).

2.1 Basic access control objectives are thus to;

- ♦ Permit or deny entry to or presence in a given place;
- ♦ Increase or reduce the rate or density of movement to, from or within a defined place;
- ♦ Protect persons, materials or information against unauthorised observation or removal; and
- ♦ Prevent injury to people or damage to material (Auerbach 2003:187).

2.2 Basic egress control objectives

- ♦ To ensure that company assets are not taken out of the premises without the necessary approval; and
- ♦ It creates an additional layer of protection and acts as a crime deterrent i.e. employee theft, shoplifting etc.

According to Fay (2006:184) access control are often layered to decrease the chance that an attempted intrusion will succeed. A layered system could for example, start with an requirement that an entering employee stop at an unmanned electronically operated gate at the outer perimeter of the property, and through a key pad on a stanchion punch the correct sequence of an alphanumeric code. As the employee approach the operating portion of the facility, he/she is again stopped, this time at a sentry gate. After saying good morning and showing the guard an identification badge (card) the employee passes under a raised gate arm and parks in a fenced area patrolled by or under the observation of a security officer. The next control point is the outer door of the building where the employee works. An electronic lock on the exterior door releases after a valid card key is placed in close proximity to a card reader. The exterior door leads to a central lobby monitored by a security officer.

Layered protection and concentric protection are similar but different.

Layered protection is designed to facilitate entry of authorized persons;

Concentric protection is designed to deny entry to unauthorised persons.

When we talk about concentric protection the protected asset is enclosed in several protective layers. It should however be noted that employee vetting should be viewed as part of concentric protection as staff can co-operate with external criminal syndicates.

3. Outer layers of protection

The selection of safeguards can be influenced by the nature of the site, including the following aspects;

- ♦ Size, layout, utilities, and compositional materials;
- ♦ Internal activities;
- ♦ Assets in or forming part of the site;
- ♦ Security experience of the security manager;
- ♦ Philosophy of the site's ownership or management; and
- ♦ Culture of the workforce.

3.1 Perimeter Barriers

According to Fay (2006:157) the security advantages of barriers are;

- ♦ To control the movement of people, vehicles into, out of, within the facility;
- ♦ Segregate or compartmentalize sensitive areas; and
- ♦ Provide physical protection to objects, materials, and processes of a critical nature.

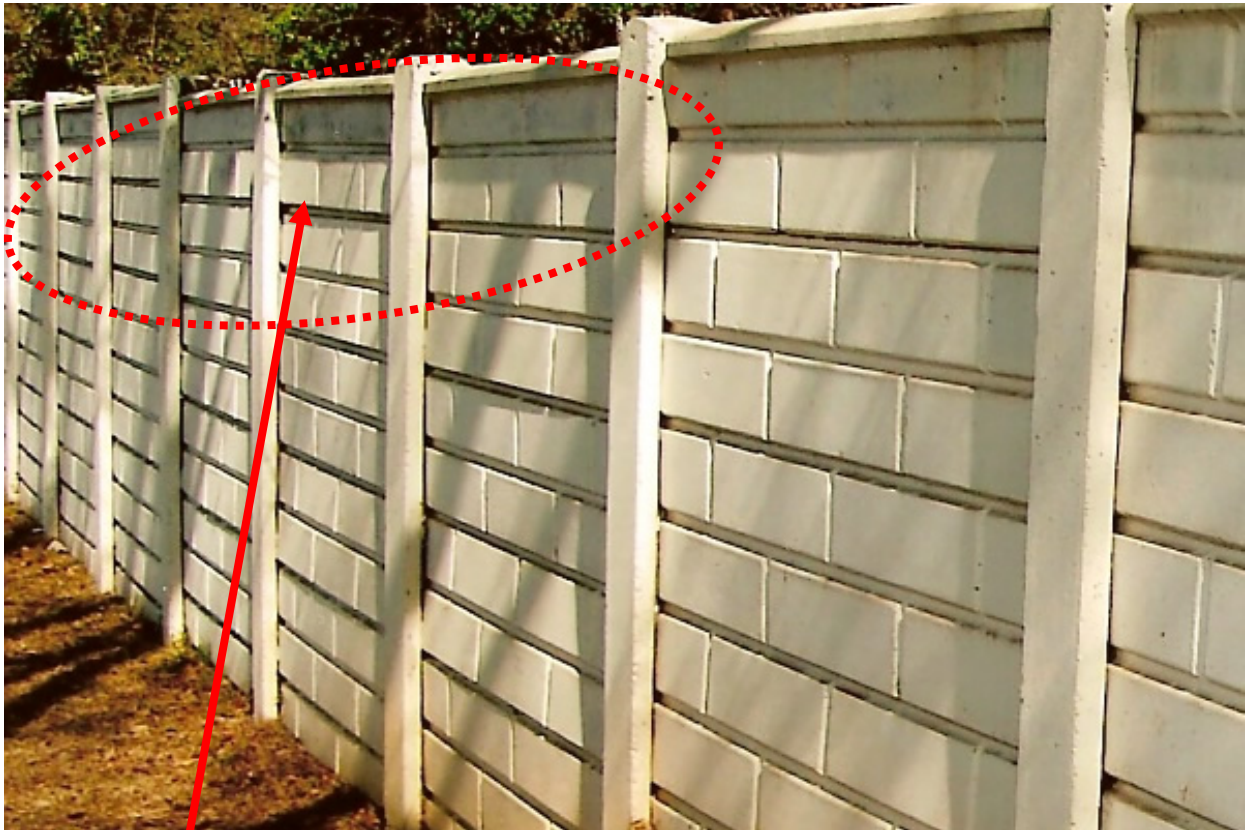

TAKE NOTE

It should also be noted that a fence that is linked to an alarm system will give early warnings when a security breach occur.

EXAMPLE:

Example of a Precast wall that offers little security resistance. The slabs can be kicked out with relative ease.

Precast walls offer little security resistance.

3.2 Facility Security Controls (General)

Just as every building has its own personality, each building / facility has its own unique movement control requirements. Failure to recognise this element of facility control can not only be expensive, but also disastrous. As security managers review the loss potential of their buildings, consideration must be given to the movement and control of people within its confines.

An access and movement control system designed to complement the management procedures will go a long way toward reducing losses and making the other protective systems efficient and cost effective. Management directives and policies are designed to meet a variety of conditions. The access control system should show the same flexibility in order to provide predictable regulation and monitoring of the movement of people and vehicles.

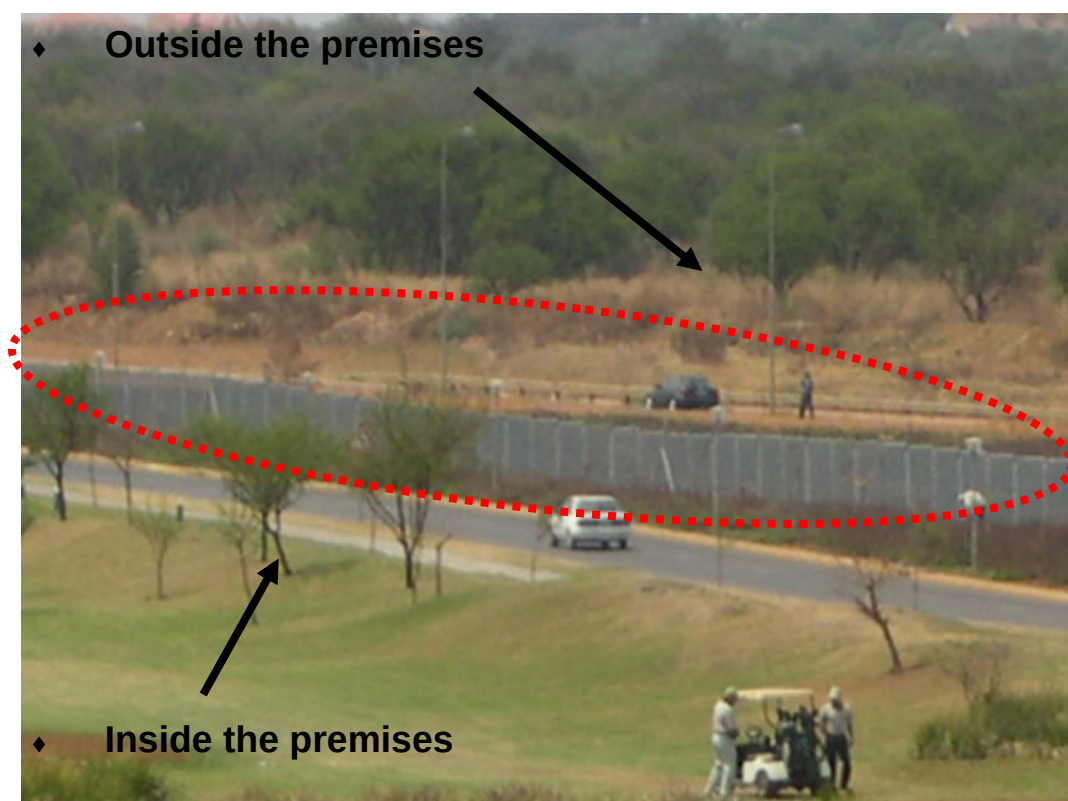

In many cases, access control must go beyond simply entry to the building. Employees need ready access to the building and their work locations, however, they do not necessarily need access to the entire facility.

Movement of visitors should be monitored and controlled to ensure their safety and the protection of proprietary material. This can be handled discreetly with appropriate access and egress control techniques. Access to high value items i.e. computer labs, high value items etc should be regulated (Cherry 1986: 157)

- ♦ Where possible limit entry points to the facility as it will enhance access and egress control standards.
- ♦ Where possible (and if money is available) erect double barriers to strengthen the perimeter i.e. double fences or additional deterrents (electrical fences) If CCTV is available and is monitored on a 24 hour basis, a lower standard in perimeter resistance can be acceptable.

Fences provide only minimal security; they do serve important functions in exterior perimeter protection, including the following;

- ♦ Define the site perimeter;

- ♦ Briefly delay an intruder;

- ♦ Channel employees and visitors to authorized gates;

When is the only access point

- ♦ Keep dishonest people out; and serve as a sensor platform (Hess & Wroblewski (1996:100))

Standard security instructions must be observed by all security staff and should contain:

- ♦ Departmental (Site) policies and procedures;
- ♦ Access control, guarding and patrolling duties and procedures;
- ♦ Maintenance of security records and registers;
- ♦ Reporting of incidents, fire and other emergency procedures;
- ♦ Standards of appearance, uniform and use of equipment;
- ♦ Duties in respect of security technical aids, hardware and alarm systems;
- ♦ Use of drugs alcohol, firearms and other dangerous weapons; and
- ♦ Other matter of a routine nature applicable to security staff (Mckenzie, McLoughlin & Twiss 1983:42).

3.3 Security Lighting

Illuminating a site or building perimeter will not delay an intruder, but an intelligently designed installation may increase the deterrent factor. If it is used in conjunction with CCTV good lighting will certainly assist in detecting unwelcome visitors. There are many factors to consider when planning a strategy for security lighting. Here are some of the most important;

Which areas need to be illuminated? The key areas for consideration are;

- ♦ The site boundary or perimeter including external car parks;
- ♦ The open areas between the perimeter and the building(s);
- ♦ Pedestrian and vehicle access points; and the
- ♦ Building interior.

3.4 Vehicle Control

Vehicle control should be precise and conform to the protection requirements of the facility. Vehicle movement monitoring is primarily designed to alert a dispatcher in shipping and receiving of the arrival or departure of a vehicle (Cherry 1986: 116).

3.5 Visitors Control

♦ Turnstile

DEFINITION

A turnstile, also called a baffle gate, is a form of gate which allows one person to pass at a time.

It can also be made so as to enforce one-way traffic of people, and in addition, it can restrict passage to people who insert a coin, a ticket, a pass, or similar. Thus a turnstile can be used in the case of paid access (sometimes called a fare gate when used for this purpose), for example public transport as a ticket barrier or a pay toilet, or to restrict access to authorized people, for example in the lobby of an office building.

EXAMPLE:

The turnstile is suitable for applications such as public buildings, offices, schools and universities where the requirements of appearance and security are equally important.

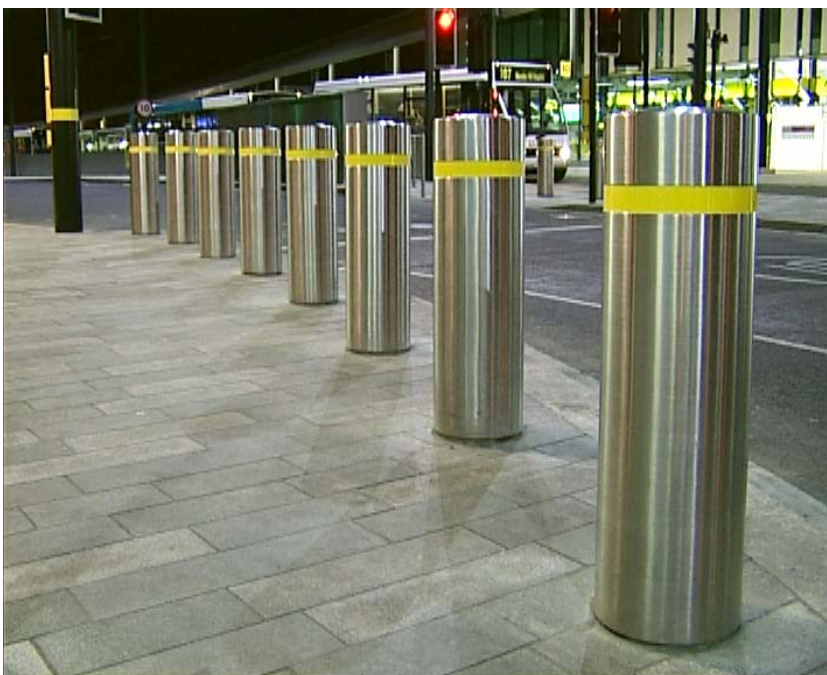

♦ Road Blockers

Road Blockers can be used to ensure that vehicles do not enter or leave your premises without your permission. With a wide variety of applications, road blockers can prove particularly useful on sites with limited access space.

♦ Bollards

Bollards have numerous uses. They can be used for ornamentacar-parking security, to reserve parking paces or to restrict accemanual (collapsible or telescopic) and hydraulic bollards that caa range of access control methods.

♦ **Speed Ramps**

Used to control the speed of flow of traffic, for example, on cons shopping centers etc.

♦ **Boom gates**

Suitable for commercial applications and for car parks where heavy duty open/close operations are required.

4. Identification system

The business rationale for access control stems from the belief that a workplace must be safe and secure for everyone. In practice, the belief is carried out by eliminating harm to people, such as by controlling entry to a hazardous work zone or denying entry to persons posing a threat.

4.1 Employee Badges (Cards) and Visitor Passes

A basic and time honoured access control tool is the employee identification card or badge. A workplace with few employees and low security needs may choose to rely on personal recognition as an alternative to the identification badge, but a workplace with more than a few employees will find the identification card useful. The control of visitors works differently. Visitor passes issued at an entry control point substitute for identification cards. Visitor passes are typically constructed of paper. The pass is dated and issued for a set period; usually one day is applied for at a reception or security desk, and requires the visitor to present a form of photo identification i.e. drivers licence, ID book etc.

A condition of issuance may be approval by an employee. In some situations only certain employees are allowed to approve visitor access, and the day and time of visit must be pre-arranged. In medium to high security situations, the visitor are escorted while inside the facility. In a safety sensitive workplace, a visitor may have to undergo a briefing, view a film, sign a release, and put on protective apparel such as a hard hat, safety glasses, and steel toed boots. There must be a record of the visit.

4.2 Types of Identification Cards

Control of access at a protected facility is very likely assisted by a card identification system designed to verify each entering person's authority to enter. As one can expect the efficiency and effectiveness of the system is effected by the reliability of the card identification equipment, number of entry points, size of the workforce, operating hours, and above else human competence.

Nearly all access cards are of the same general size and shape, and in overall appearance look somewhat like a credit card. The common types are Hollerith, magnetic stripe, barium ferrite, bar code, Wiegand, proximity, and smart card. These types are discussed in the following material;

- ♦ **Hollerith:** This very early form of access card has small holes that can be read by a light source or contact brushes. Today's use of Hollerith cards is pretty much limited to hotel security. The guest slides the card into a slot above the door handle. The lock disengages when a reading of a card matches a guest's registration at the lobby desk. This very simple technology is usually not suitable for higher level security.

♦ **Magnetic stripe:** This type of card has a data encoded stripe on one face. When the card is withdrawn from or swiped through a reader, the stripe passes over a magnetic head not unlike that of a tape player. The code on the stripe is compared to access criteria that were earlier entered into the system. Access criteria reflect the cardholder's identity, the areas the cardholder is authorised to enter, and time frames for entry (normal operating hours, evening hours, weekends, holidays). Compared to other card types, the magnetic stripe cost less and can hold a large amount of data. However the magnetic stripe can wear out or become damaged over time, and the vinyl plastic construction of the card can lead to chipping and breaking.

- ♦ Low cost cards
- ♦ Cards can be duplicated
- ♦ Designed for low security situations
- ♦ Best suited for interior applications
- ♦ Scratching the stripe may destroy the card

- ♦ **Barium ferrite:** This type of card is sometimes called a magnetic spot card or magnetic sandwich card. It is cut from three layer plastic stock. The middle layer or core is barium ferrite that has been magnetized with a pattern of dots arranged in a readable pattern. The pattern is code fixed by the magnetic polarity of the spots. The barium ferrite card is slightly more expensive than the magnetic stripe card. It is also subject to problems resulting from wear and tear, and is vulnerable to deciphering.

- ♦ Controller is mounted inside the reader
- ♦ Thicker than standard cards
- ♦ Barium ferrite is embedded in the cards
- ♦ Bending of cards may render them useless

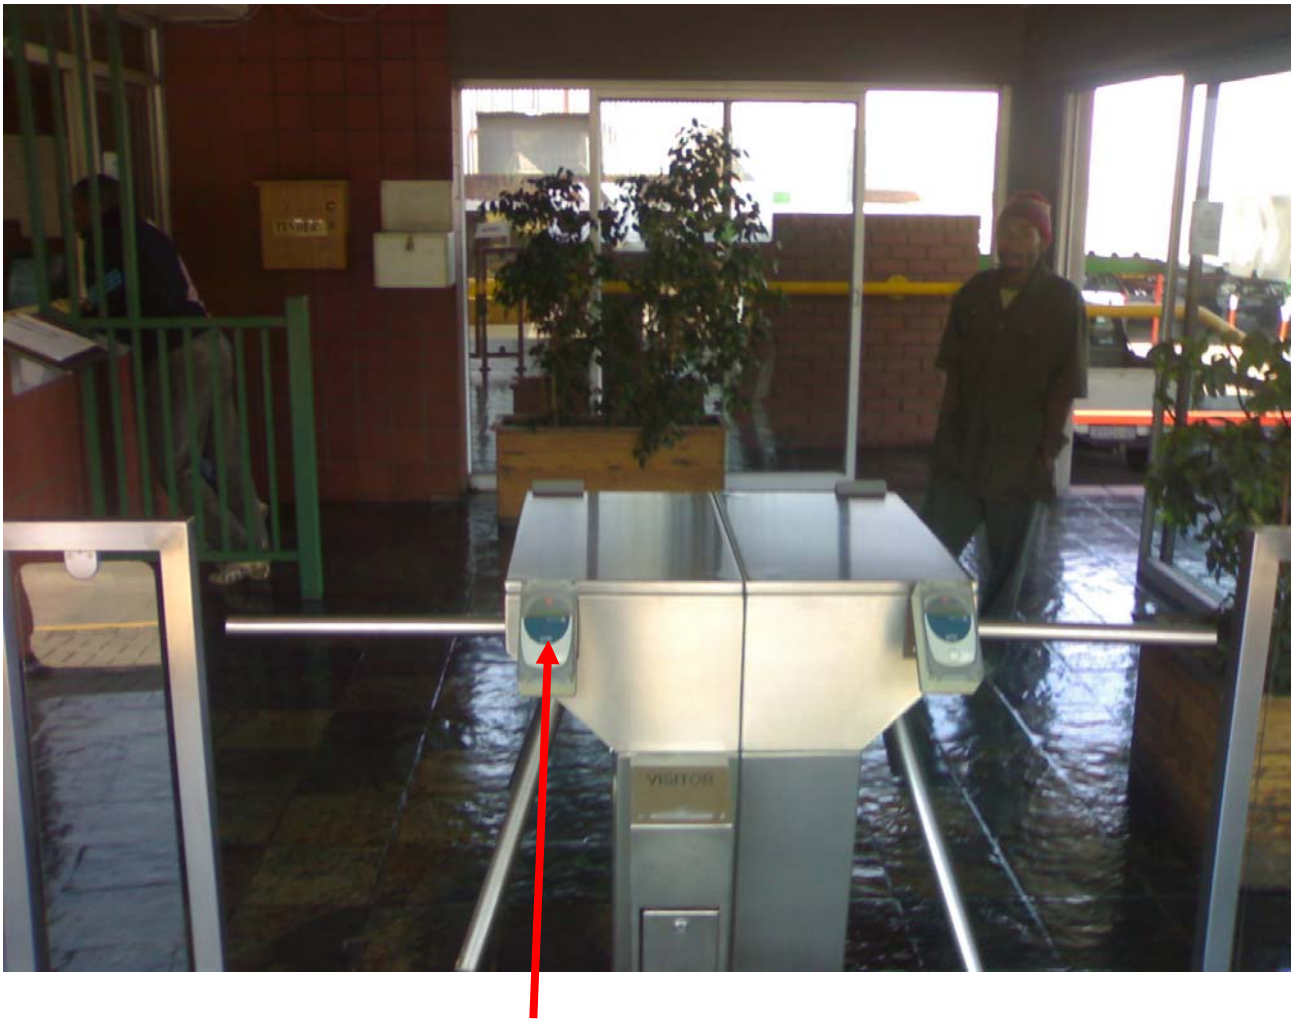

- ♦ **Bar code:** This card bears on one side (usually the front) a series of lines forming a code readable by an optical scanner. The pattern of lines looks very much like the pattern of lines found on the outside of supermarket items. Because a bar code is easy to duplicate, it is not suitable for good security practice.
- ♦ **Wiegand:** The Wiegand card is also called an embedded wire card. The technology is based on the Wiegand effect, a phenomenon observed when specially prepared ferromagnetic wires suddenly reverse themselves upon exposure to an external magnetic field. Wires inside the Wiegand card are formed in a permanently tensioned helix twist. The order and the spacing of the wires establish a unique code for each card. The magnetic reversals in the wires are converted into distinct, consistent electrical pulses that are read and processed. The card's thickness and composition of stock make it resistant to pocket damage. It is, however, susceptible to malfunction arising from wear after many passes through reader slots.
- ♦ Swipe through use
- ♦ Thicker than standard cards
- ♦ Best suited for interior application
- ♦ Magnetic wires are embedded in the card
- ♦ Bending of cards may render them useless

- ♦ **Proximity:** The proximity card has an embedded microcircuit that emits frequencies detectable by a reader. The reader reacts to frequencies when the card is placed in close proximity. Sturdy composition makes the card resistant to tampering and interfering effects of weather and shock. Two other features of the card make it attractive. The emitted frequencies are sufficiently powerful for the reader to be concealed behind a thin wall or mounted inconspicuously (possibly for aesthetic reasons), and the card can work through clothing or a handbag.
- ♦ Small card size
- ♦ Easiest of all readers to use
- ♦ Standard read range of 4" Extended read ranged to 36"
- ♦ Operates through glass and walls
- ♦ Operates well in extreme climates
- ♦ Readers encased in epoxy and pvc
- ♦ Narrow and single gang mount

- ♦ **Smart Card:** Regarded as the card of the future, the smart card contains its own processor, making it capable of running its own internal programs. The very large amount of data that can be contained in a smart card allows it to serve purposes that go beyond access control. For example, the cardholder's medical history can be stored for quick retrieval in medical emergency and cashless purchases is recorded. The downside of the smart card is cost. On the other hand it offers several advantages; the card is durable and tamper resistant, counterfeiting and duplication are difficult, encryption presents an obstacle to compromising the code, the card can be programmed to expire on a certain date, and smart card technology is suitable for many applications (Fay 2006: 178-180).

An example where access and egress are controlled with card readers.

An example where vehicle access and egress are controlled with card readers.

5. Biometric Access Control

Going beyond the card reader systems, there is a new generation of personal identification and verification that may or may not be used in conjunction with card readers. These sophisticated systems are specifically personalised and are sometimes referred to as biometric systems.

Among the various biometric access control systems are the following;

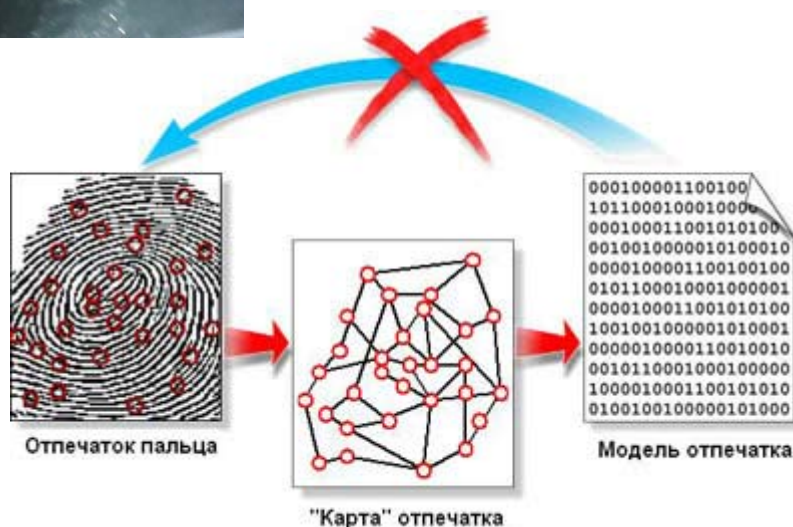

- ♦ **Hand geometry systems:** Electronically scan an individual's hand and store the image in the system's repository for future comparison. On future system activations, the present image is measured and compared with the initial stored reference version. A positive match between the current image and the stored version allows access.

- ♦ **Fingerprints:** Are unique to an individual. Initially a person's fingerprints from one finger is collected and stored by the system. The reference file may also be done manually, but this calls for a trained operator to compare the prints on a card. A computerised system uses an electro-optical recognition technique to establish a positive comparison from stored data before permitting access.

Principles of fingerprint biometrics

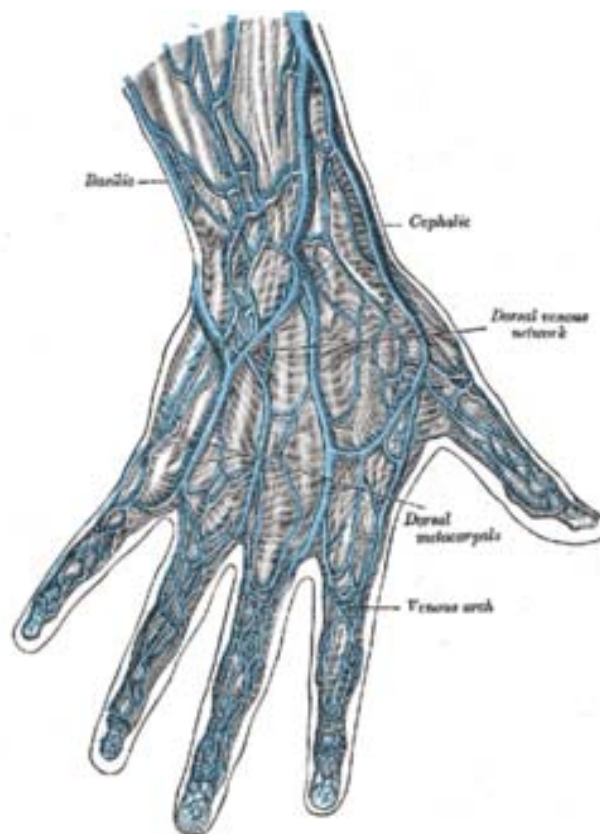

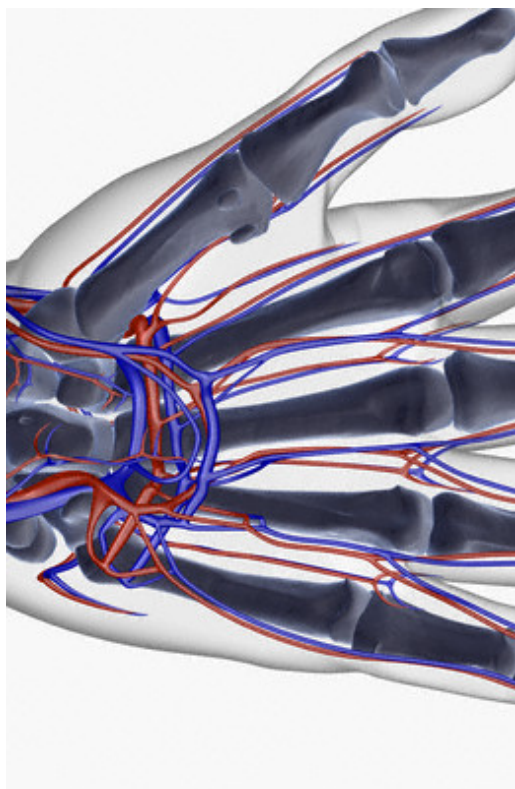

- ♦ A fingerprint is made of a number of ridges and valleys on the surface of the finger.
- ♦ Ridges are the upper skin layer segments of the finger and valleys are the lower segments. The ridges form so-called minutiae points: ridge endings (where a ridge end) and ridge bifurcations (where a ridge splits in two).
- ♦ Many types of minutiae exist, including dots (very small ridges), islands (ridges slightly longer than dots, occupying a middle space between two temporarily divergent ridges), ponds or lakes (empty spaces between two temporarily divergent ridges), spurs (a notch protruding from a ridge), bridges (small ridges joining two longer adjacent ridges), and crossovers (two ridges which cross each other).
- ♦ The uniqueness of a fingerprint can be determined by the pattern of ridges and furrows as well as the minutiae points. There are five basic fingerprint patterns: arch, tented arch, left loop, right loop and whorl. Loops make up 60% of all fingerprints,

- ♦ **Palm prints:** Are as individual as fingerprints. A biometric system based on palm prints works much the same as the fingerprint technique. Palmprint measurements are taken, digitized, processed and stored. The large amount of memory required prevents broad use of this approach.

Principles of palm vein biometrics

- ♦ The pattern of blood veins is unique to every individual, even among identical twins. Palms have a broad and complicated vascular pattern and thus contain a wealth of differentiating features for personal identification. Furthermore, it will not vary during the person's lifetime. It is a very secure method of authentication because this blood vein pattern lies under the skin. This makes it almost impossible for others to read or copy.
- ♦ An individual's vein pattern image is captured by radiating his/her hand with near-infrared rays. The reflection method illuminates the palm using an infrared ray and captures the light given off by the region after diffusion through the palm. The deoxidized haemoglobin in the in the vein vessels absorbs the infrared ray, thereby reducing the reflection rate and causing the veins to appear as a black pattern. This vein pattern is then verified against a preregistered pattern to authenticate the individual.
- ♦ As veins are internal in the body and have a wealth of differentiating features, attempts to forge an identity are extremely difficult, thereby enabling a high level of security. In addition, the sensor of the palm vein device can only recognize the pattern if the deoxidized haemoglobin is actively flowing within the individual's veins.
- ♦ This system is not dangerous, a near infrared is a component of sunlight: there is no more exposure when scanning the hand than by walking outside in the sun.

- ♦ **Retinal patterns:** Are captured by a device that recognizes the the retinal vessel pattern of an individual's eye. A scanned picture of the bag of the eye is converted to analog signals that are then converted into digital data for storage. This digital data is stored in the system's computer as a standard for later comparison and matching.

- ♦ **Signature verification:** Requires that an individual make a minimum of three copies of his or her signature. The average of these signatures is retained and stored in memory. The system's signature verification system is based on the dynamics of the individual's pen motion and is related to time. These measurements are taken by using a specially wired pen, or in most cases, a sensitised pen. Future signatures made to gain access are compared with the original averaged signature and when a match is made, access is granted. Early versions of this system went through a series of pen malfunctions and breakdowns, but later versions seem to have solved this problem.

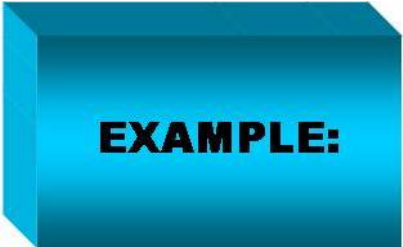

- ♦ **Voiceprints:** Are taken by the system and recorded in an analog signal that, like the retinal pattern technique, is converted to digital data. Measurements are derived and stored in the host computer. Future references are based on an individual voice pattern of a few single words. The system may require the individual to speak three or four words from a reference file or seven or so words. A match of the voice patterns from the reference file permits access.

6. Access Control Methods

A newer use of the term risk management has come about from corporate security personnel who find themselves managing certain risks never encountered by insurance people.

EXAMPLE:

Examples of these would be the day to day considerations of executive protection and, of course, managing what, to some companies, may be the greatest risk of all, the problem of employee theft.

Here security personnel routinely become involved in the area of loss prevention. In many companies today, fidelity insurance deductibles have risen to the point where, for all practical purposes, the day to day theft on the part of employees or outsiders is not insured and must be managed by the security department (company).

Coupled with this is the impact that loss prevention efforts of a security department can have on merchandise inventories. Merchandise inventory variances frequently are classified as shortages, and although they are influenced by many factors, including dishonesty, they are almost never insured.

The year end physical inventory of any company involved in the manufacture, distribution, or retailing of merchandise has a tremendous impact on the profit and loss statement of the company for the year. This is not something that can be insured against, and therefore the security manager is, in fact, managing what could easily be one of the largest risks that a company may face (Barefoot & Maxwell 1987:110-111).

Access and egress control are the most popular security methods deployed to manage employee crimes, by controlling assets that are most prone to internal and external criminal activity.

The most basic question that should be asked is “What is to be protected?”. The answer to this question is where the access and egress control functions should be focussed on i.e. motor vehicles, laptops, audio visual equipment etc.

Before access control methods can be established, access control duties need to be established i.e.

EXAMPLE:

- ♦ What gates are manned permanently by security staff?;
- ♦ Are there other gates, including railway gates?
- ♦ If so, when are they open and in what circumstances?
- ♦ Who is responsible for opening and closing these gates?
- ♦ Where are the keys kept?
- ♦ What actions are required at the gates by security officers;

- ♦ When vehicle enter – to collect goods, to collect scrap and waste materials, for any other purpose for example delivery at stores etc.
- ♦ When vehicles leave – after collecting goods, after collecting scrap or waste materials, after making deliveries at stores etc.
- ♦ When employees wish – to enter at unusual times – to leave at unusual times – to bring in large parcels and cases – to take borrowed tools away – to return borrowed tools – to remove purchases of company products from the premises.
- ♦ When requests are received for keys of premises at – usual times – unusual times.
- ♦ When property is reported as having been found on the premises.
- ♦ When property is reported lost on the premises.
- ♦ A fire is reported to have occurred on the premises (MacKenzie et al 1983:115)
- ♦ Are vehicles and persons going to be escorted when they enter the premises?
- ♦ Where is the most sensitive areas on site, is there a higher security access control standard for example required at the chemical lab than at the despatch store room?

TAKE NOTE

The answers to the above questions will determine the access control methods to be deployed. This will be based on client needs and the exposure of certain assets to internal and external criminal threats.

7. Access control standards in relation to external and internal threats

It is now more generally recognised that prevention through risk elimination or control, rather than insurance policies, is the best means of protecting assets. In addition, it is recognised that regardless the insurance coverage a company may have, full compensation for losses is virtually impossible. Avoidance of losses consequently has become the interest of most organisations. Insurance generally is recognised as the second line of defence against losses that cannot otherwise be avoided.

The insurance industry requirement that a company protect itself from potential losses had a great impact on the development of corporate security programs. Management soon realized that implementing a comprehensive corporate loss control program not only greatly reduced insurance premiums but also was a cost effective way to avoid risk. Insurance protects a company after a loss occurs, but it does nothing to prevent losses. A well planned security program, however, often will prevent many types of losses from ever occurring in the first place (Barefoot & Maxwell 1987:110-111).

Access and egress control form the basis of the protection of assets in relation to internal and external threats identified. Assets need to be controlled via access and egress control standards. If 10 laptops were stolen in three months these laptops needs to be controlled at security access/egress points. This measure will ultimately ensure less losses, which will not only ensure a positive insurance profile, but a very cost effective security program due to less losses..

Clients can also expect to security to control goods purchased at the egress point. At Builder Warehouses you will always find guards verifying stock purchased against the receipt. The receipt is then stamped by security, confirming that the goods were verified as correct. This measure will not only reduce thefts at the cash registers, but will also minimise stock shrinkages as a result of employee theft

8. The role of access control in emergency situations

Specific site access control procedures should clarify the following with regard to emergency situations;

Access control procedures should clearly state who should be allowed in the Emergency Control Centre.

- ♦ **Medical Emergencies:** Access should be controlled at medical scenes to ensure that the paramedics can perform their duties without interference from bystanders.
- ♦ **Fire Emergencies** During a fire emergency access to buildings needs to be controlled and limited to fire teams and the fire department on arrival.
- ♦ **Armed Robbery:** When an armed robbery or any other crimes are committed, access to the scene should be limited to ensure that the crime scene is not contaminated. The crime scene should be secured and only the police should be allowed on the crime scene.
- ♦ **Assembly Areas:** Access and egress needs to be controlled at assembly points to ensure that all persons can be accounted for during an emergency.
- ♦ **Suspicious Mail and Packages:** If a suspicious mail or package is found inside a premises / building access should be limited to the area until the police declare the area safe.
- ♦ **Explosions:** When an explosion occurs at a building premises (criminal / non criminal) only emergency teams (only if there are injuries) and emergency personnel, EMS, Fire Brigade and SAPS should be allowed on the scene.
- ♦ **Chemical Spills:** Access to areas where chemical spills occurred should be limited to health and safety specialists.
- ♦ **Re-Entry of Evacuated Buildings:** Access to buildings should only be allowed once a directive is received for the client or emergency personnel.

[illegible]

STUDY UNIT 2

Operating and maintaining access / egress site

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Operate and maintain an access/egress control site in accordance with the relevant legal requirements and workplace procedures
- ♦ Conduct access/egress control of people, vehicles and goods per workplace procedures
- ♦ Operate site-specific equipment in accordance with workplace procedures and manufacturer's specifications
- ♦ Deal with unauthorized/authorized people, vehicles and goods as per workplace procedures and relevant legal requirements
- ♦ Handle emergencies and irregularities according to workplace procedures and contingency plans
- ♦ Ensure appropriate interpersonal skills for effective customer relationships

1. Operating and maintaining an access/egress control site

To perform their duty effectively, it is of the outmost importance that the security officer understands all task and functions. The work procedures may differ from site to site, depending on the type and extent of the property to be guarded. There are five aspects to be controlled during access and egress control:

- ♦ Employees
- ♦ Visitors
- ♦ Contractors
- ♦ Vehicles
- ♦ Goods

2. Procedures**2.1 Work procedures**

Work procedures for access and egress control must identify the following:

- ♦ Who has access and to which area.
- ♦ Access and egress procedures.
- ♦ Identification procedures.
- ♦ Monitoring of people, vehicles and goods during a period of duty/visit.
- ♦ Site instructions and regulations to be applied during access and egress control.

3. Registers

DEFINITION

Registers are documents that control items such as keys, vehicles, weapons etc.

If used correctly, a history can be kept of the item being recorded, for example, the key register will indicate each time someone has taken the key to open a door or safe and when it has been returned. The type of registers and layout will differ from one company to another.

3.1 Rules regarding security registers and documentation

- ◆ Each page of every register must be numbered numerically.
- ◆ No pages may be removed from any register.
- ◆ All entries to be written in ballpoint pen (blue or black). Do not use a pencil.
- ◆ All entries must be legible (readable).
- ◆ No entry in any register to be erased or altered in any way. Do not use Tippex!
- ◆ No additions should be written between the lines.
- ◆ If an incorrect entry is made, it must be cancelled by drawing a line through it and the correct entry recorded beneath it.
- ◆ All registers must be kept in a clean and neat condition.
- ◆ Entries are to be made in English.
- ◆ When a register is full it must be returned to the security manager who will issue a new one.

TAKE NOTE

You will use registers every single day when executing your role as security officer. Some of the registers that you are likely to encounter during your period of duty, as a security officer are listed next.

3.2 Visitors' register

- ◆ Visitors to a site should sign this register.
- ◆ It serves as a control register of who visited the site.
- ◆ When signing the register the visitor also gives permission that they, any container in their control or possession, or their vehicle may be searched when entering or leaving the site.
- ◆ The person also indemnifies the company against all claims that may arise as a result of injuries sustained or damage to their property while on site.

When completing the visitor's registers the following steps needs to be followed.

Step 1:**VISITORS REGISTER:**

The keeping of a Visitors Register at all security controlled sited is a requirement.

The register must be in book form and all the pages must be numbered.

Step 2:**DETAILS REQUIRED:**

Each page of the register is divided into columns, so that details about the visit and the visitor can be recorded easily:

- ◆ Date of visit
- ◆ First name and surname of visitor
- ◆ Reason for visit and name of Site employee who is being visited
- ◆ Name and address of firm/company
- ◆ Visitor's permit number
- ◆ Time of entry
- ◆ Time of exit
- ◆ Visitor's signature
- ◆ Vehicle registration number

Step 3:**COMPLETING THE REGISTER:**

After the visitor has stated the purpose of his visit and it has been established that the Site employee can in fact speak to him, he will be asked to complete the Visitors Register in full.

Also see Work Instruction for Access Control.

Step 4:**MAINTENANCE OF REGISTER:**

On completion of a book, it must be returned to the Section Supervisor.

The register will be kept for one year for safekeeping /references.

NUMBER: 00001

I hereby grant permission for an Authorised officer of
to inspect the contents of my vehicle or any container I may
have in my possession whilst I am on a site occupied by

[illegible]

3.3 Key control register

All keys issued to any person must be entered in this register and signed for by the receiver. Keys may not be handed from one person to the other. All keys returned must be entered and signed for by the security officer receiving them.

Effective key control is essential to contribute to a manageable and professional security service rendered to customers.

Please note the discussion on the other registers are dealt with in detail in the unit standard 244181: PERFORM HAND OVER AND TAKE OVER RESPONSIBILITIES

KEY CONTROL REGISTER							
ACTIVITY:		Page ____ of ____ pages					
Key Code Number	Location	No. of Keys Issued	Date Issued	Issued By	Issued To:	Date Returned	Received By

4. Functions at access and egress control points

Access and egress control points are established to deny unauthorized access to secure areas and the premises in general. For a security officer to do his or her task, their task description will include the following:

- ♦ Supervising entry and exit of all employees.
- ♦ Regulating all goods entering or leaving the premises.
- ♦ Controlling all visitors or contractors entering and exiting the premises.
- ♦ Issuing all authorized visitors with access permits.
- ♦ Keeping of a visitors' log book.
- ♦ Searching people, vehicles and goods.
- ♦ Keeping a record of all vehicles entering or exiting the premises.
- ♦ Patterns to observe in potential criminal behaviour.

5. Procedures at a access and egress control point

♦ Step 1: ENTRANCE GATE:

- ⇒ Ensure that all entrance gates are closed at all times.
- ⇒ After hours all entrance gates must be locked.
- ⇒ Keys of the gates must be in possession of the guards on duty at all times.

Step 2: ARRIVAL OF EXTERNAL VISITORS:

- ⇒ Receive/greet and establish purpose of visit.
- ⇒ Visitor to be identified by means of ID.
- ⇒ Ensure that person who is going to be visited is present and available and willing to take the responsibility of the visitor.
- ⇒ If so, complete the Visitors Register.

Step 3: ARRIVAL OF SITE EMPLOYEES:

- ⇒ Receive, greet and establish purpose of visit.
- ⇒ Visitor to be identified by Site Photo Permit.
- ⇒ If in possession of Site Photo Permit, access can be granted.

-
- ⇒ If not in possession, the Visitors Register must be completed.
 - ⇒ Ensure that person who is going to be visited is present and available and willing to take the responsibility of the visitor.

◆ **Step 4: PROTECTING AUTHORITIES:**

- ⇒ All identified South African Police Service (SAPS) and South African National Defense Force (SANDF) personnel have authority to enter a security controlled site without being searched.

◆ **Step 5: SEARCHING OF VEHICLES:**

- ⇒ All vehicles entering/exiting to be searched.
- ⇒ The vehicle to stop at gate.
- ⇒ Driver and passengers to be positively identified.
- ⇒ Security guard informs persons that their vehicle is liable to be searched.
- ⇒ All occupants are to be asked to leave the vehicle.
- ⇒ Gate to stay closed.
- ⇒ At all times the driver is to remain with the guard while the search is conducted.
- ⇒ Driver must open doors, bonnet, boot of vehicle and any holders in vehicle like brief-cases, toolboxes etc.
- ⇒ If the driver objects to having his vehicle searched, he will not be given access to the secured premises.
- ⇒ If concealed items or stolen items are found when exiting, it must be handed according to the Reporting of Incidents/Crime Work Instruction.

◆ **Step 6: TOOLLIST:**

- ⇒ Check standard Tool list per vehicle as supplied by Site Driver. (Must be signed by Site Supervisor).
- ⇒ Tool list to be compiled if equipment is not part of Standard Tool list.

♦ **Step 7: REMOVAL PERMITS:**

- ⇒ An approved removal permit must accompany all equipment, without a standard tool list, leaving a security-controlled site.
- ⇒ Check the removal permit for authorised signature.
- ⇒ Check the material according to the removal permit.
- ⇒ Copy of removal permit to be filed and follow-up if there is a return-date.

♦ **Step 8: VEHICLES AFTER HOURS:**

- ⇒ An “After Hours Log Sheet For Site Vehicles” form must be completed from 17:00 till 07:00 and 24 hours over weekends and public holidays for all vehicles entering or exiting the security controlled site.

♦ **Step 9: EXITING OF VISITORS/EMPLOYEES:**

- ⇒ The Visitors Register must be completed when exiting.
- ⇒ Searching, as described, must be adhered to.
- ⇒ Check Removal Permits, Tool Lists, Standard Tool lists.

6. Procedures for emergencies at a access and egress control point

- ♦ Step 1: Identify type/nature of emergency.
- ♦ Step 2: Determine seriousness of emergency.
- ♦ Step 3: Determine immediate threat.
- ♦ Step 4: Respond to the emergency according to the site Emergency Preparedness Plan.
- ♦ Step 5: Stabilize the situation, if possible.
- ♦ Step 6: Report immediately to Manager/Supervisor, and Site Manager/Supervisor.
- ♦ Step 7: Make an entry in the Occurrence Book.

7. Permits and waybills

Security officers performing access and egress control functions needs to take note of the information that needs to be on a waybill.

A completed waybill must include the following information:

1. **Waybill Number:** An assigned freight bill number.
2. **Shipper Number:** If you are the originator of the shipment and responsible for the payment of the invoice, enter your account number here.
3. **Consignee Reference Number:** If the consignee is responsible for the shipping charges, enter the consignee's account number.
4. **Shipper Information (From):** Enter your company's name, complete address, telephone number and the name of a shipping contact. Please complete this section completely and accurately. The Shipper's Reference Number is an optional field where a cross-reference number can be entered for your company's internal use.
5. **Consignee Information (To):** Enter the consignee's name, complete address, telephone number and contact name. To ensure prompt delivery, please make sure that a contact name is included, that the address is not a Post Office Box and that all information is complete and accurate. The Consignee PO Number is an optional field where an authorization number can be entered as a reference number.
6. **Third Party Information:** If neither the shipper nor the consignee is paying the charges, then enter the name, complete address, telephone number, contact name and account number of the party responsible for payment. The Third Party's account number must be entered in the Third Party Number box.
7. **Declared Value:** If the shipper wants to declare the value of a shipment at an amount higher than Estes Air's limitation of liability, they must do so in this box.
8. **Description:** Enter a complete description of the contents of the shipment. If a shipment is palletized, include the number of pieces loaded on each shipping pallet.
9. **Dimensions:** Enter the number of pallets and/or pieces in the shipment with the same dimensions on each line. Each piece or pallet with different dimensions (length, width, height and weight) will need to be listed separately.
10. **Special Instructions:** Please enter any special instructions relating to the rating or handling of the shipment in this space.
11. **Service Requested:** The shipper must check one of the five service levels shown in this section. If no service level is selected, the shipment will default to Next Business Day P.M. service and will be rated accordingly.

7. Measures in access control

7.1 Zoning

A system of controlling movement and access of personnel and visitors is essential. This enables the security officer to monitor and control the access to and movement within the different parts of the premises. This prevents or makes it much more difficult for unauthorized persons to enter unauthorized areas. Different companies will have different ways of setting up and running a system to monitor and control employee and visitor movement, but the general principles are as follows:

Determine the various working areas within the company, e.g.

- ◆ Receiving area (AA),
- ◆ Production area (BB),
- ◆ Engineering area (CC),
- ◆ Planning area (DD),
- ◆ Administration area (EE), etc.

- ◆ AA will be allowed only in the receiving area only.
- ◆ BB will be allowed only in the reproduction area and has to be escorted there.
- ◆ AA/BB/CC/DD is most probably a person involved with planning, engineering and production.

Allocate a code to each area, which corresponds to each person's identification card or permit. These ID cards must be tamper-proof and should adhere to normal criteria for ID cards (e.g. photograph, name, surname, etc).

The code of the card can indicate the grade of access or the working area where the employee is allowed.

Ensure that the system installed only allows employees access to the areas where they work or have a legitimate reason to visit. When deciding who, where and when, take the following into consideration:

- ♦ Determine the importance of the area to employee safety and continued production.
- ♦ The risk or vulnerability of the area to, for e.g. sabotage, theft or natural disaster such as a fire.

7.2 Permits

All employees or visitors should wear a company ID card visibly on them for effective access controlling. It is obvious that it could be difficult to identify all employees if there are more than 500 persons at a company. Therefore it is important that an effective permit system is installed which works with programmed key cards, which are identified automatically by computer-programmed readers. This will identify the employee at access control points as well as where the employee is on the premises.

These permits must be signed for by the employee when issued and returned when he or she leaves the company.

EXAMPLE:

Examples of permits are:

- ♦ Permanent line employees.
- ♦ Permanent administrative employees.
- ♦ Temporary employees, e.g. students, and relief employees.
- ♦ Related group company employees.
- ♦ Contractors, and external servicemen working on the premises.
- ♦ Visitors.

7.3 Escorting

If the site is very security sensitive or physically hazardous, visitors should be escorted by a security office to the person being visited and back to the entrance. If this is the requirement:

- ◆ Visitors should have a definite appointment.
- ◆ Visitors are escorted to and from the person visited (by security officer or by someone appointed by the person visited).

To maintain and operate an access control point it is important to know the procedures, legislation and regulations for access control. It is also important to know who is allowed access. Additional measures to help the security officer be pro-active in access control cannot be over emphasized.

8. Access/egress control of people, vehicles and goods

Entry and exit to premises is usually controlled by an access and egress control system.

The functions of such a control system could include the following:

- ◆ Supervision of access and/or egress of regular employees.
- ◆ Control of visitors and contractors.
- ◆ Control of delivering or dispatching of goods.
- ◆ Conducting of authorized searches.
- ◆ Supervision of access or egress of all vehicles, including the searching of such vehicles.
- ◆ Escorting persons or vehicles in high risk areas.
- ◆ Keeping record of the above.

The work procedures for access and egress control systems can vary from area to area and be more specific depending on the security risk of the premises.

Persons and vehicles can be grouped into the following (zoning):

- ◆ Permanent staff that work in a specific area.
- ◆ Contractors, repair and maintenance staff who are required to work in any area to carry out their tasks.
- ◆ Security personnel who are required to supervise specific security operations.
- ◆ Vehicles delivering goods (these can vary from a simple parcel to petrol or explosives).
- ◆ Vehicles collecting garbage or scrap.
- ◆ Company vehicles delivering or loading the core product.

The best way of identifying persons is by an identification card system (visibly displayed on the individual).

- ♦ This identification card system couples to a list of persons authorized for access provides further confirmation. The list must be current.
- ♦ Electro-magnetic card systems must be based on the card-key principle.
- ♦ Visitors and contractors must give their name and purpose of visit to the access control security officer. This information should be checked against some form of identification e.g. ID book or passport.
- ♦ The visitor must be checked with the person being visited and if approved, the visitor's particulars must be recorded in a visitor's register. A visitor's card must be given to the person and then he or she must be escorted to the office of the person visited. Once the visit is over, the visitor must be escorted back to the egress point.

Vehicles, which have to load and unload goods, sometimes have to follow designated routes. There can also be specific control points for loading and unloading, which have to be kept in mind. Again these vary from site to site from goods being accounted for per requisite at a loading point as well as, for example, in a retail store where a client enters or exits with goods.

In the case of valuables and firearms, the access control security officer must follow the necessary procedures, e.g.:

- ♦ On entering the premises or as a request from a visitor, the item must be declared to the access control security officer.
- ♦ The access control security officer completes a register, which lists all the items, gives a description of them and the number of items. It is of the utmost importance that the access control security officer makes note of all the details of the item/s.
- ♦ A receipt will be issued for all items to be signed by both parties. The items will be placed in a bag or contained and locked in a safe provided for this purpose.
- ♦ Items will be reclaimed on leaving the company premises on presentation of the receipt.

Both of the handing and taking over access controllers will document the action. Refer to the handing and taking over checklist already discussed and relevant forms connected to this checklist.

Example of a register for valuables and firearms.

Customer valuable and firearm register							Pg Nr ...	
Date	Name	Tele- phone	Firearm type / valuable item	Firearm nr / valuable item nr	Owner signature		Access control security officer signature	Key Nr
					In	Out		

9. Site-equipment

People are the most important link in the security chain, with technology assisting us to be more effective in our work. The most important technology assisting us in daily access control is:

- ♦ Computers
- ♦ Identification systems/methods
- ♦ Visual inspection
- ♦ X-ray machines
- ♦ Dogs
- ♦ Vehicle control

9.1 Computers

The computer used need not be too sophisticated. It basically needs to concentrate on providing movement control, e.g. card, time and zone control.

Identification, as part of the computer system, consists of a permit issued to an individual. The permit should identify the person by means of an ID photo, name and his or her own unique ID number. There are different types of permits:

- ♦ ID card/photo permits (for manual access control).
- ♦ Magnetic cards.
- ♦ Electric current cards.
- ♦ Active electronic cards.

The security personnel make a visual comparison between the person and the information on the permit. As a result of this comparison - positive or negative identification - access is granted or refused.

9.2 X-ray machines

They are used in high-risk areas such as military buildings, airports, courts and prisons etc to detect unauthorized articles such as weapons and explosives.

9.3 Dogs

Dogs are also used very effectively for the same purpose and can also sniff out drugs and other illegal contraband.

9.4 Metal detectors

Metal detectors use an electromagnetic field, which registers any metal on a person's body or in their baggage and the location thereof.

9.5 Vehicle control

Vehicle control has to be applied at several high-risk areas such as airports, petrol depots, harbours and lower-risk areas such as office premises and shopping centres. This is necessary to ensure that unauthorized and dangerous apparatus such as firearms, explosives or any illegal items or weapons are not taken into the premises.

Vehicle control is achieved by:

- ♦ Booms, e.g. office premises, shopping centres, housing estates, universities, technicians, etc.
- ♦ Buffer equipment, e.g. roadblocks or areas where vehicles are prohibited such as at sporting events, accidents etc.
- ♦ Inspection pits, e.g. entrances at highly secured areas, weigh bills, airports.
- ♦ Dogs, e.g. to sniff out explosives, drugs or smuggled goods.
- ♦ Personnel with mirrors, e.g. to look underneath vehicles for explosives, unauthorized parcels, smuggled equipment, or stolen property.

Security personnel also need to ensure a steady flow of people, vehicles and goods through an access control point without neglecting effectiveness. This is especially important at functions or sports events, shopping centres, factories, or residential estates.

10. Observation skills

It is the duty of every security officer to develop his ability of observation to such an extent that he is able to achieve mainly three aims (importance), namely:

- ♦ To supply a true account which would enable a court to come to a logical conclusion.
- ♦ To ensure that clues which would be of assistance in solving crime, are not overlooked or lost.
- ♦ To be capable to observe and describe minutely people, objects and scenes of crime.

10.1 The importance of observation

Observation contains a distinct mental image of what is seen, with the definite realisation that the total image consists of detail and knowledge that this total image is related to reality. As an example, we observe a medicine bottle. The total image is the medicine bottle.

The knowledge that the total image consists of detail necessitates the analysis of the contents, the label, possible fingerprints, etc. whilst the knowledge that the total image is related to reality directs our thoughts to the possibility of a case of poisoning or the smuggling of drugs. In this manner nothing is lost and we practise seeing facts in their true perspective.

The ability to identify and recall a situation accurately, completely and distinctly is effective observation.

The ability to observe is based on heritage, experience and education. The danger exists in relying on heritage and experience to observe a situation. The interpretation of the incident may subjectively be influenced, as the person uses himself as a measure of evaluation.

10.2 Senses

As some senses are more reliable than others therefore the accuracy of the observation will depend on the senses applied to make the observation.

- ♦ **To see** is the most accurate and developed sense of man but is not always objective.
- ♦ **To hear** is the most objective sense but is not absolute as it is difficult to accurately identify the distance, direction and the source of the sound. Estimating for instance how far one is away from the source of a sound is very difficult, especially if the source is unknown. The observer can seldom accurately establish the direction of sound.

In most humans the sense of being able to feel is not properly developed and must therefore be seen as a limited means of observation. When the sense of feeling is not supported by sight, the results is mostly misleading.

- ♦ Therefore, an observation done in the dark by means of feeling is generally very doubtful. However, **the sense of touch** is greatly developed in blind people.
- ♦ The sense that enables us **to smell** is also very unreliable as it is possible even to smell something when there is no odour present.

Suggestion very often draws attention to the observation an odour. Taste is also very unreliable as it is too individualistic. The objective sense of taste is very easily replaced the observer's own interpretation of the taste which he experiences. We must also remember that he ability to observe differs from person to person, someone eyes may be very sharp and his hearing very bad, whilst in another person the opposite may be true.

Psychologists maintain 85% of what we learn, we gain by using our eyes, 13% with our ears and the remaining 2% by means of other senses.

10.3 Types of observation

- ♦ **Incidental Observation:** We deal with casual observation during every moment of our lives and our interpretation of the situation will depend upon our evaluation of the incident. The danger of this is that the same situation may develop in security work, in that the observational powers of the security officer becomes blunted and he no longer directly, penetratingly or concentrating.

- ♦ **Positive Observation:** This is the ability to apply a correct and balanced judgement in regard to every particular observation made of anything. This principle that correct and accurate judgement should be applied at all times in order to enable the observer to distinguish between the important and the un-important, the un-natural and the natural, the ordinary and the unusual and the impossible and possible, is one of the cardinal principles of the theory of observation.

Sound judgement is a quality which must be cultivated. This can be done by substituting every casual observation of common situations with the study of particulars.

10.4 Observation should be tackled systematically

- ♦ Get a complete picture of the situation itself.
- ♦ Work in straight line or circles.
- ♦ Afterwards, attention must be given to independent, bigger objects in order to see what their relation to the whole may be.
- ♦ Each object must be studied independently to ascertain how it fits into the picture.
- ♦ The next step is to look at, feel, dissect and do everything possible to the object and any part thereof in order to observe the object and everything related thereto.
- ♦ Lastly, and the most important, is to write down or imprint on the mind every particle and relation of the fact.
- ♦ Observation without the ability interpret and represent facts clearly, completely and objectively would be of no value. Accurate description, therefore, means to differentiate between that which has actually been observed or seen. Conclusion are to be reported separately with regards to facts and deductions.

11. Observational patterns

People	
Features	♦ Describe main features
Build	♦ Slender, muscular, athletic, over weight, characteristics
Race	♦ (SA, foreign) white, black, colored, Asian
Age	♦ Approximate age
Gender	♦ Male or female ♦ Voice ♦ Characteristics ♦ Pace (when walking - slow, fast, etc) ♦ Complexion / skin tone
Hair	♦ Color ♦ Straight, wavy, curly ♦ Long, short ♦ Bold, Afro, etc
height	♦ Approximate height in metres
Vehicles	
Feature	♦ Describe what to look for, e.g. car, bakkie, etc
Make	♦ Toyota, Volkswagen, Corolla, Golf, etc
Model	♦ Gti, GLX, 1300, etc
Registration Nr	♦ The registration number followed by the provincial code, e.g. GP, EC, MP, etc
Colour	♦ Light, dark, bright, dull, metallic and the colour
Year of manufacturer	♦ If possible
Description	♦ Condition of the car externally and internally, accessories, tyres
Objects	
Feature	♦ Describe what to look for
Description	♦ Size, colour, form
Peculiar features	♦ Wires hanging out, grease marks, etc
Condition	♦ Wear and tear, signs of damage

IMPORTANT

It is extremely important for security guards, who are often involved in investigations, arrest and the subsequent court cases to adhere strictly to filling in a pocket book. The evidence recorded in this book can be of vital importance as evidence.

12. Recording**12.1 Occurrence Book**

An occurrence book is used to record all security related activities that occur during your period of duty.

EXAMPLE:

The following examples of information could be included in the occurrence book:

- ◆ Reporting on and off duty.
- ◆ Crimes committed during your duty.
- ◆ Arrest made.
- ◆ Actions resulting from the arrest.
- ◆ Accidents that occurred during the duty.
- ◆ Damage to property.

EXAMPLE:

- ◆ Special duties that you may have executed.
- ◆ Visits made by supervisors or other staff members.
- ◆ Patrols undertaken - including the time the patrol started and ended and where it was done.
- ◆ Any unusual incidents that occurred.
- ◆ Complaints received.
- ◆ Security breaches.
- ◆ Items found.

TAKE NOTE

Keep the following in mind when writing entries into your occurrence book:

- ◆ Number your entries in a chronological sequence starting with one.
- ◆ Ensure the correct date, month and year is recorded in the occurrence book.
- ◆ Make entries in the order in which they occurred and make sure the correct time is allocated to each event.
- ◆ Use black ink to write and red ink to underline. Registers are usually inspected in red ink.
- ◆ Write neatly and legibly.

There are various ways that an occurrence book can be laid out. This will differ from company to company.

See example which you may adapt to meet the requirements of your company.

The occurrence needs to be completed by adhering to the following steps.

Step 1: An Occurrence Book must be in place at every security-controlled site.

Step 2: Books must be numbered.

Step 3: Every page must be numbered.

Step 4: No pages to be removed.

Step 5: Each page must consist of:

- ◆ **Heading**
- ◆ **Day of week and date**
- ◆ **Three columns for:**
 - ⇒ **Serial number:** To be numerical. Beginning with no 1 for each new month.
 - ⇒ **Time:** The exact time when occurrence happened.
 - ⇒ **Nature of occurrence:** Starting with a keyword and must be underlined in red pen. Following by the full details of occurrence. After each entry, one line must be left open.

Step 6: KEYWORDS: On duty, Off duty, Patrol, Report, Handing-over, Visit, Inspection, Late entry, Incident, Supervisor visit, etc.

Step 7: Use the OB 24 hours a day for the following:

- ♦ Booking on/off duty.
- ♦ Handing-over of duties & equipment
- ♦ Details of patrols according to the Work Instruction for Patrols
- ♦ All incidents
- ♦ Crime
- ♦ Safety Hazards
- ♦ Abnormalities
- ♦ Irregularities
- ♦ Full report on duties done

Step 8: Maintenance of OB:

To be inspected and signed by Security Supervisor twice a month and once a month by the contract Manager. Alternatively your company will determine otherwise.

Occurrence Book that is completed in full must be handed over to the Manager for safekeeping/references.

The record keeping period for an Occurrence Book is 5 years.

EXAMPLE ONLY

12.3 Pocket book

Pocket books are small A-6 books that each security officer must keep with them at all times and are checked by supervisors and management. These books are used to assist the security supervisor to maintain a high standard of control of all staff and to monitor the activities of officers. Any deficiencies in the security system through entries made by his/her staff members should also be followed up. When a pocket book is full, it is handed in and a new one will be issued to the security officer as per company procedure.

The reasons for keeping the pocket book are:

- ♦ Keep records of duty hours on site.
- ♦ Keep notes, orders and instructions.
- ♦ Document items when away from the occurrence book.
- ♦ Record necessary details to use at a later stage.

TAKE NOTE

No personal telephone numbers or scribbling is allowed. You may also not tear out pages of the pocket book. This book is used as an aid to a security officer within the work environment.

EXAMPLE:

Example of Pocket book entry

2005/08/13 21:00	Housebreaking and Theft Report: On 2005/08/13 at 20:30 during a routine patrol I discovered a housebreaking and theft at the computer lab of Building BB. No suspects or witnesses could have been identified. I secured the crime scene and no one was allowed to enter the scene.
	I reported the matter to Mr Maseko my security manager, and the SAPS investigated the crime scene. SR Reference Number 13/08/2005 and OB Reference Number 123/08/2005.
	Signed: J Ramoba

13. Dealing with unauthorized/authorized people, vehicles and goods

To control unauthorized and authorized people, vehicles and goods at an access control point, the following guidelines will make it difficult for unwanted persons to gain access to premises:

13.1 Visitors

- ◆ Have a special visitors parking and issue them with a temporary parking permit (to be returned when they leave).
- ◆ Identify particular entrances and exits for use by visitors. These entrances should be security controlled.
- ◆ Keep a visitor's register with the following visitor particulars:
 - ⇒ Name and surname,
 - ⇒ Firm or company represented,
 - ⇒ Reason for visit,
 - ⇒ Time in and out,
 - ⇒ Confirmation of appointment (the person visited),
 - ⇒ Permit (number) issued before entering and collected before departure.
- ◆ All visitors must be escorted when entering a restricted area. Make use of a security officer or make the person being visited responsible.

13.2 Vehicles

- ◆ A permit system should also be in place for authorised vehicles.
- ◆ The vehicles should be checked prior to entry and before leaving a restricted area.
- ◆ Delivery vehicles should be provided for by means of a special permit or detachable sticker and should also be checked on arrival and before departing.

13.3 Goods

Almost all companies are faced with the risk of losing products, goods, equipment, etc. Some companies also run the risk of employees or visitors entering the premises with unauthorized goods, which are not allowed for various reasons.

It will always be the responsibility of the access control security officer when something goes wrong or missing. Be very specific in your procedures and reporting in the relevant registers of incidents.

14. Client focused approach

Public relations is measured by public opinion. It is the attitudes and viewpoints others have of company and the security profession. Public relations is people oriented and it is how we project ourselves, our company and the profession to others that determines in great part, the image. The objective of public relations is to foster and maintain a positive public image. Effective public relations requires a high degree of understanding and good will and is something that has to be worked constantly. Before we continue with the lecture there is a self assessment form that has to be filled in. This is not a test, only you will know what the answer is.

14.1 Dealing with members of the public

Often the security officer is the first person seen when entering a company's premise, If the visitor sees the security personnel in a sloppy, dirt and incomplete uniform, then the first impression of the company and security officer will be poor. This poor impression will be further reinforced if the security officer lacks professionalism, cannot communicate effectively and demonstrates bad manners. On the other hand, a favourable impression will be created if the security officer:

- ♦ **BE SMARTLY DRESSED:** Make sure your uniform is clean and complete.
- ♦ **ACT PROFESSIONALLY:** Know your job and responsibility.
- ♦ **COMMUNICATE EFFECTIVELY:** Greet the person, Be friendly at all times, Be helpful
- ♦ **SHOWS CONCERN:** Show your concern regarding their safety.
- ♦ **DEMONSTRATE GOOD MANNERS:** All security personnel own it to themselves to be proud of what they do. This pride can be shown in their personal appearance, in their enthusiasm for performing their assignments, and is a sense of accomplishment for a job well done. If a positive attitude prevails within the security department, it will carry over to all those who come into contact with them.

14.2 Addressing the public

Public relations is the image that is portrayed by members of the security force. To portray and maintain a positive image with clients, the following must be done:

- ♦ **COURTESY:** Courtesy serves as the "oil" in public relations.
- ♦ **FRIENDLINESS:** A smile costs nothing. It only switches on the green light for good communications and makes future contact easy.
- ♦ **DIGNITY:** Never consider yourself better than your client. When you address your client, you must always: Stand up straight, Use a controlled voice, Use proper language.

[illegible]

STUDY UNIT 3

Legal compliance

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Understand the relevant legislation, policies and regulations required for lawful searching, detention and/or seizure of people, vehicles and goods.

1. Relevant legislation, policies and regulations

The security officer must know and understand the relevant legislation, policies and procedures of access and egress control.

The security officer has to understand the relevant legal requirements to carry out his task efficiently and within the law.

- ♦ Searching - Section 39 of the CPA 51/1977.
- ♦ Arresting procedures and sue of force - Section 42(3), Section 39 and Section 49(1)(a)(b) of the CPA 51/1977.
- ♦ Trespassing - Trespass Act 6/1959.
- ♦ Seizure of articles - Section 23 CPA 51/1977.

2. Search and seizure

2.1 State may seize certain articles

Section 20 of the Criminal Procedure Act regulates which articles the state may seize. Although this section refers to articles that may be seized by the state, it is also of importance to the security official since section 23(2) empowers a security official as a private person to seize articles mentioned in section 20 under certain prescribed circumstances (section 23 is discussed later in this learning unit).

The State may, in accordance with the provisions of this Chapter, seize anything (in this Chapter referred to as an article)-

- (a) which is concerned in or is on reasonable grounds believed to be concerned in the commission or suspected commission of an offence, whether within the Republic or elsewhere;
- (b) which may afford evidence of the commission or suspected commission of an offence, whether within the Republic or elsewhere; or
- (c) which is intended to be used or is on reasonable grounds believed to be intended to be used in the commission of an offence.

2.2 Search and seizure without a warrant

Section 23 of the Criminal Procedure Act empowers both police officials and security officials, as private persons, to search arrested persons and/or seize certain articles. This section stipulates the following:

1. On the arrest of any person, the person making the arrest may:
 - ♦ If he is a peace officer, search the person arrested and seize any article referred to in section 20 which is found in possession of or in custody or under the control of the person arrested, and where such a peace officer is not a police official, he shall forthwith deliver any such article to a police official or;
 - ♦ If he is not a peace officer (such as a security officer), seize any article referred to in section 20 which is in possession of or in the custody or under the control of the person arrested and shall forthwith deliver any such article to a police official.
2. On the arrest of any person, the person making the arrest may place in safe custody any object found on the person arrested and which maybe used to cause bodily harm to himself or others.

Section 23(1)(b) permits any person, which includes the security official, to seize any article referred to in section 20 (see discussion above), provided that it is in the possession or control of the arrested person. The requirement relating to the possession is not particularly problematical, but care must be exercised with regard to control. Geldenhuys (1991:236) suggests that there should be a direct link between the arrest and the search and seizure and that therefore the above phrase should rather be interpreted as referring to the arrested person and his or her immediate vicinity, for instance the vehicle he or she is driving, his or her suitcase, clothes, or the room in which he or she is found.

A person will also be in control of articles if he or she has physical authority or command over an article and this authority or command must be present prior to any seizure being effected. There must therefore be some outward indication of control, physical authority or command.

TAKE NOTE

Take note that while the police official may both search a person and seize an article referred to in section 20 which is found in possession of or in the custody or under the control of the arrested person, the security official, as a private person, in terms of section 23(1)(b) may not physically search an individual under arrest in order to establish whether articles referred to in section 20 are present. The security official may arrest the person, but then have to call the police to search such a person.

Geldenhuys (1992:238) suggests that if the security official suspects that a person is in possession of stolen goods, and he or she is not allowed to search the suspect in terms of section 24 of the Criminal Procedure Act, the security official should inform the suspect that unless he consents to the security official searching him or her, he or she will have to arrest the suspect, and call the police to search him or her.

CRITICAL

Take into consideration that a security official may search any person who consents to being searched, whether the person was arrested or not.

INTERPRETATION

Note that section 23(2) permits both the police official and a private individual to place in safe custody any object found on the person of the arrested person which is capable of being used to cause bodily harm to the arrested person or other persons. This class of objects would not only include offensive weapons (e.g. edged weapons, firearms, clubs and the like) but also more mundane objects such as belts, shoelaces and cigarette lighters.

3. Consent

3.1 Requirements of consent

When does a person consent to something? **Consent is a manifestation or expression of the state of mind of a person towards another, from which it is clear that the formed desires or is at least reconciled to a certain act or a certain state of affairs.**

The consent

- ♦ must be given voluntarily
- ♦ must be based on a true knowledge of the material facts
- ♦ must be given by a person who is capable in law of consenting
- ♦ must not be mere submission
- ♦ may be given expressly or tacitly
- ♦ must be given by the complainant
- ♦ must be given before the act

To be accepted as consent, the expression of the complainant's state of mind must comply with the following requirements:

- ♦ **It must be made voluntarily, without compulsion.** Although the Romans held that *voluntas coacta voluntas est* (a forced will is nevertheless) a will, it is generally accepted today that a declaration which is not made voluntarily cannot operate as consent. In *McCoy, supra*, X, who was the manager of an airline, gave a hiding to an air hostess who had contravened a regulation. According to the evidence X gave her the choice of either submitting to punishment in this form or being dismissed from her job. The court held that there was no consent since she submitted to the punishment under coercion.

- ♦ **It must rest on a true knowledge of the material facts.** If a woman consents to medical treatment, the doctor who has sexual relations with her cannot evade liability on the ground of consent.
- ♦ **The injured party must be capable in law of consenting.** A mentally ill person, a sleeping person, a drunk or an infant cannot consent. To ascertain whether a child is capable of forming a will, regard must be had to his age, mental maturity and experience. No general rule can be formulated.
- ♦ **Mere submission is not consent, especially with juveniles.** If an adult person who is capable in law of consenting submits himself without protest to imminent danger which he may easily escape, it is hard to draw any inference other than that of consent.
- ♦ **The consent may be given either expressly or tacitly.** There is no qualitative difference between express and tacit consent.
- ♦ **The consent must be given before the otherwise unlawful act is committed.** Approval given afterwards does not render the act lawful.
- ♦ **In principle consent must be given by the complainant,** but in exceptional circumstances someone else may consent on his or her behalf, for example where a parent consents that an operation be performed on his or her child. (A child who is 18 years of age or older may independently consent to an operation: section 39(4) of Act 74 of 1983).

4. Searching premises

In terms of section 24 of the Criminal Procedure Act, private individuals are entitled to search premises. This section stipulates the following:

Any person who is lawfully in charge of or in occupation of any premises and who reasonably suspects stolen stock or produce, as defined in any law relating to theft of stock or produce, is on or in the premises concerned, or that any article has been placed thereon or therein or is in the custody or possession of any person upon or such premises in contravention of any law relating to intoxicating liquor, dependence-producing drugs, arms and ammunition or explosives, may at any time, if a police official is not readily available, enter such premises for the purpose of searching such premises and any person thereon or therein, and if such stock, produce or article found, he shall take possession thereof and forthwith deliver it to a police official.

TAKE NOTE

Note that the term premises is defined in section 1 of the Criminal Procedure Act as including land, any building or structure, any vehicle, conveyance, ship, boat or aircraft. This explanation makes it a widely couched section with a vast area of operation. However, the section does limit the area of operation to certain specified categories of offences, as discussed below. The section is more readily understood when reduced into its different components:

- ♦ Any person who is lawfully in charge or
- ♦ in occupation of any premises and

The persons who are allowed to enter such premises, include the owner, a lessee or a employee who has been placed in control of the premises by either the owner or the lessee (Kriegler 2002:43). From this, it is clear that this section will also include security officials who are left lawfully in charge of premises by the owner or lessee of the premises.

- ♦ who reasonably suspects that

TAKE NOTE

Note that here again we have the test of reasonableness that applies.

- ♦ stolen stock or produce, as defined in any law relating to the theft of stock or produce .is on or in the premises concerned or
- ♦ that any article has been placed thereon or therein or is in the custody or possession of any person upon or in such premises in contravention of any law relating to:
 - ⇒ intoxicating liquor
 - ⇒ dependence-producing drugs
 - ⇒ arms and ammunition
 - ⇒ or explosives may

If we look at the above, it is clear that the security official who is in charge of a premises may only search premises or a person in relation to the above-mentioned offences.

- ♦ at any time if a police official is not readily available

Whether a police official is readily available must be determined by means of an objective test.

- ♦ enter such premises for the purposes of searching such premises and any person thereon or therein

Interestingly enough, whereas the private person who makes an arrest may not search a person in terms of section 23(1)(b) of the Criminal Procedure Act, he or she may both search a person and seize certain specified articles in terms of section 24. Keep in mind that this section is limited to certain specified categories of offences.

- ♦ and if any stock, produce or article is found, he shall take possession thereof and forthwith deliver it to a police official.

The entry and search must be for the purpose of taking possession of the article (stock, produce etc.) and delivering these to a police official as soon as possible.

As already mentioned above this section does not only authorizes the search of persons, but also vehicles etc. In this regard, we suggest that it is in the best interests of security officials to obtain clear instructions from their employers and the owners/occupiers of land on which they are employed regarding the search of especially vehicles that leaves or enters the specific premises. It is also wise to obtain permission from the driver of any vehicle searched as well as the authority from the owner of the premises prior to initiating a search of a vehicle. The prescriptions regarding the search of women in section 29 of the Criminal Procedure Act will also have to be considered

5. Control of Access to Public Premises and Vehicles Act 53 of 1985

The above must also be read with the stipulations of the Control of Access to Public Premises and Vehicles Act 53 of 1985 when applicable. The purpose and aim of this Act is to provide for the safeguarding of certain public premises and vehicles and for the protection of the people on or in these premises and vehicles, and for related matters. It is your duty as a security officer to give effect to the purpose of the Control of Access to Public Premises and Vehicles Act. As a security service provider it will also be your duty to enforce the stipulations of the above statute by:

- ♦ safeguarding public premises and vehicles
- ♦ protecting the people on or in these premises and vehicles
- ♦ controlling access regarding any public premises or public vehicles
- ♦ removing a person from public premises or a public vehicle under certain circumstances

5.1 Definitions

'authorized officer' means any person authorized by the owner of any public premises or any public vehicle to act in terms of the provisions of section 2;

'dangerous object' means any explosive or incendiary material, any explosive or incendiary device, any firearm, and any gas, material, weapon or other article, object or instrument which may be employed to cause bodily harm to a person, or to render a person temporarily paralysed or unconscious, or to cause damage to property, as well as anything which the Minister may by notice in the Gazette declare to be a dangerous object for the purposes of this Act;

DEFINITION

'owner of any public premises or any public vehicle' means the head of the department of State, division, office or other body which occupies or uses those premises or that vehicle or is in charge thereof, as the case may be

'public premises' means any building, structure, hall, room, office, convenience, land, enclosure or water surface which is the property of, or is occupied or used by, or is under the control of, the State or a statutory body, and to which a member of the public has a right of access, or is usually admitted or to which he may be admitted;

'public vehicle' means any vehicle, conveyance, ship, boat, craft or aircraft which is the property or under the control of the State or a statutory body, and which is used for the transport, for profit or otherwise, of members of the public;

5.2 Section 2 of the Act stipulates the following:

- (1) Notwithstanding any rights or obligations to the contrary and irrespective of how those rights or obligations arose or were granted or imposed, the owner of any public premises or any public vehicle may:
 - (a) Take such steps as he may consider necessary for the safeguarding of those premises or that vehicle and the contents thereof, as well as for the protection of the people therein or thereon;
 - (b) Direct that those premises or that vehicle may only be entered or entered upon in accordance with the provisions of subsection (2).
- (2) No person shall without the permission of an authorized officer enter or enter upon any public premises or any public vehicle in respect of which a direction has been issued under subsection (1)(b), and for the purpose of the granting of that permission an authorized officer may require of the person concerned that he:
 - (a) Furnish his name, address and any other relevant information required by the authorized officer;
 - (b) Produce proof of his identity to the satisfaction of the authorized officer;
 - (c) Declare whether he has any dangerous object in his possession or custody or under his control;
 - (d) Declare what the contents are of any vehicle, suitcase, attaché case, bag, handbag, folder, envelope, parcel or container of any nature which he has in his possession or custody or under his control, and show those contents to him;
 - (e) Subject himself and anything which he has in his possession or custody or under his control to an examination by an electronic or other apparatus in order to determine the presence of any dangerous object;

- (f) Hand to an authorized officer anything which he has in his possession or custody or under his control for examination or custody until he leaves the premises or vehicle;
 - (g) In the case of premises or a vehicle or a class of premises or vehicles determined by the Minister by notice in the Gazette, be searched by an authorized officer.
- (3) (a) Where an authorized officer grants permission in terms of subsection (2), he may do so subject to conditions regarding the carrying or displaying of some form of proof that the necessary permission has been granted, the persons on or in the premises or vehicle with whom he may not come into contact, the part of the premises or vehicle which he may not enter upon, the duration of his presence on or in the premises or vehicle, the escorting of the person concerned while he is on or in the premises or vehicle, and such other requirements as he may consider necessary.
- (b) Without prejudice to the provisions of the Trespass Act, 1959 (Act 6 of 1959), an authorized officer may at any time remove any person from any public premises or public vehicle if:
- (i) that person enters or enters upon the premises or vehicle concerned without the permission contemplated in subsection (2);
 - (ii) that person refuses or fails to observe a condition contemplated in paragraph (a);
 - (iii) the authorized officer considers it necessary for the safeguarding of the premises or vehicle concerned or the contents thereof or for the protection of the people therein or thereon.
- (4) it is not practicable to examine or keep in custody on or in the premises or vehicle concerned anything which may be examined or kept in custody under subsection (2), it may be removed to a suitable place for that purpose.
- (5) The search of a woman under subsection (2) (g) may be carried out only by a woman.

5.3 Section 3 of the Act stipulates the following:

The provisions of section 2 (2) do not apply in respect of any member of a police force established by or under any law or a member of the South African Defence Force who is required in the performance of his functions to enter or enter upon any public premises or public vehicle and who produces proof of his identity to the satisfaction of the authorized officer concerned.

Section 4 of the Act stipulates the following: Any person who:

- (a) Contravenes the provisions of section 2 (2);
- (b) For the purposes of this Act makes a statement or furnishes information which is false in a material particular, knowing it to be false;
- (c) Refuses or fails to observe any condition contemplated in section 2 (3) (a);
- (d) Holds himself out to be an authorized officer;
- (e) Obstructs, hinders, resists or interferes with an authorized officer in the performance of his functions, is guilty of an offence and liable on conviction to a fine not exceeding R2 000 or to imprisonment for a period not exceeding two years or to both that fine and that imprisonment.

6. The manner in which the search must be conducted

In terms of section 29 of the Criminal Procedure Act a search of a person and premises must be conducted in decent and orderly manner. This section stipulates the following:

- ♦ A search of any person or premises shall be conducted with strict regard to decency and order, and a woman shall be searched by a woman only, and if no female police official is available, the search shall be made by any woman designated for the purpose by a police official.

This section requires that the normal standards of decency be complied with and that the persons searched be subject to the least disrespect to their dignity possible under the circumstances.

REMEMBER.....

Remember that strip searches and probe searches should not be undertaken by security personnel.

Also remember that a female may only be searched by a female and under no circumstances may be deviated from this requirement.

Therefore it will be in order to keep a women in custody for a reasonable period of time until another women is available to search her (Kriegler 2002:52).

[illegible]

STUDY UNIT 4

Searching of people, vehicles and goods

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Search people, vehicles and goods making use of relevant methods and equipment.
- ♦ Explain the procedures of handing over of unauthorized people, vehicles or goods.
- ♦ Complete and verify all relevant documentation of an incident.

1. Introduction

As far as company employees are concerned a useful purpose is served by including in employee contracts a clause that the company through its duly appointed officials, shall at all times, if and when it is reasonably suspected that the employee has company property on his person or possession be searched. If he refuse and there is reasonable grounds for believing that an employee or any other person has stolen property in his possession, he should be detained in terms of Section 42(1) of the Criminal Procedure Act and the matter should be immediately reported to the SAPS.

2. Searching methods and equipment**2.1 Searching a person**

Keeping in mind the Criminal Procedure Act and the legal requirements when searching a female, the following general procedure has to be followed (keep in mind that different security areas will require different procedures:)

- ◆ Request the person's permission to search him or her.
- ◆ Ask them if they have anything to declare.
- ◆ Ask them to empty their pockets.
- ◆ Search the following areas:
 - ⇒ Around the collar and tie
 - ⇒ Inside and outside of the arms
 - ⇒ Front and back of the upper body
 - ⇒ Around the belt
 - ⇒ The front and back of the legs
 - ⇒ Inside thighs and crutch
 - ⇒ Turn-ups from trousers
 - ⇒ Lift the trousers to inspect the socks
 - ⇒ Seams
 - ⇒ Padded areas
 - ⇒ Under the shoes
 - ⇒ Headgear

SEARCHING A PERSON

Search the following areas:

- (A) Around the collar and tie
- (B) Inside and outside of the arms
- (C) Front and back of the upper body
- (D) Around the belt
- (E) The front and back of the legs
- (F) Inside thigh and crotch
- (G) Turn-ups from trousers
- (H) Lift the trousers to inspect the socks
- (I) Seams
- (J) Padded areas
- (K) Under the shoes
- (L) Headgear

			RACE: White, Asian, Coloured, Black etc AGE: Teenager, Young, Middle Age, Mature etc FACIAL FEATURES: Eye Colour, Big/Small Mouth, Big/Small Nose, Wearing Glasses, Scars, Jewelry etc SKIN TONE: Fair, Dark, Tanned, Light (Pale) etc HAIR COLOUR: Blonde, Brown, Black, Grey etc HAIR STYLE: Wavy, Long, Short, Afro, Curly etc BUILD: Slender, Athletic, Over Weight etc HIGHT: Tall, Short, Average etc VOICE: Deep, High, Lisp, Stutter etc PACE: When walking - Fast, Slow, Crippled etc CLOTHING: T-Shirt, Dress, Skirt, Jeans, Jacket etc SHOES: Sneakers, Boots, Sandals, High Heals etc

			RACE: White, Asian, Coloured, Black etc AGE: Teenager, Young, Middle Age, Mature etc FACIAL FEATURES: Beard, Moustache, Clean Shaven, Eye Colour, Big/Small Mouth, Big/Small Nose, Wearing Glasses, Scars, Jewelry etc SKIN TONE: Fair, Dark, Tanned, Light (Pale) etc HAIR COLOUR: Blonde, Brown, Black, Grey etc HAIR STYLE: Bald, Shaved, Long, Short, Afro, Curly etc BUILD: Slender, Muscular, Athletic, Over Weight etc HIGHT: Tall, Short, Average etc VOICE: Deep, High, Lisp, Stutter etc PACE: When walking - Fast, Slow, Crippled etc CLOTHING: T-Shirt, Golf Shirt, Tracksuit, Jeans, Jacket etc SHOES: Sneakers, Boots, Sandals etc

Equipment for the use of searching people is, for example, gloves and metal detectors.

Please note

Remember that a woman can only be searched by a woman and that the searching of people should always be done in an orderly and decent manner, preferably with someone else present.

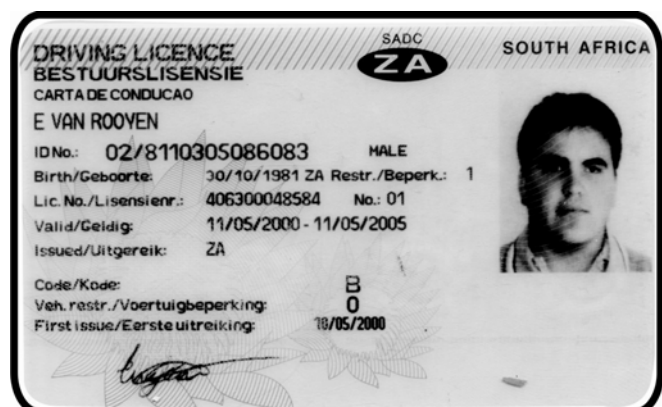

What to look for:

- ♦ Hand guns
- ♦ Ammunition
- ♦ Parts of weapons
- ♦ Knives
- ♦ Detonators
- ♦ Components of bombs
- ♦ Miniature cameras
- ♦ Stolen/pilferage items

3. Identity documents

When the search is completed, the person should be requested to produce his or her identify document or any official document in his or her possession. The identity Documents should be checked carefully and compared with the person by means of the following guidelines:

- ♦ **Photograph:** Carefully compare the photograph with the person. Take into consideration that the photo was probably taken a while ago which would mean a difference in age and hairstyle. The person can be requested to remove their headgear if it is obstructing a positive identification.
- ♦ **Stamps:** The stamp on the document should be confirmed to be genuine. Make sure that where the stamp crosses the corner of the photo it is even. If not it could mean that the original photo has been removed and substituted with another.
- ♦ **Condition of document:** The condition of the document should be checked against the date of issue. One should become suspicious if the condition does not correspond with the age of the document.

4. Questions to be asked

Question should be specific and direct such as:

- ♦ What is your name?
- ♦ What is your age?
- ♦ Where do you live? Etc.

4.1 General rules

- ♦ When you search someone, keep in mind the legal limitations laid down by the Criminal Procedure Act.
- ♦ Search the person systematically and thoroughly.
- ♦ Try to determine where this person could hide an article on his person or in his clothing.
- ♦ At all time be alert for a possible attack when searching the person.
- ♦ If contraband such as drugs, stolen or smuggled goods are found, be careful when seizing it that the suspect cannot say that the security officer planted the item in his luggage or in his clothing.
- ♦ Identify the person by means of legal ID or driver's license.

5. Searching of briefcases, parcels etc:

- ♦ Ask the owner of the briefcase or parcel to open the contained or briefcase.
- ♦ Check for false bottoms or compartments.
- ♦ Do not damage anything.
- ♦ If you notice anything suspicious, report it to a senior.
- ♦ Do not place your hands inside the briefcase or container. Rather ask owner to unpack the container.

6. Searching employees during egress control

It is not feasible to search every employee when they're all on their way home. Therefore the following procedure can be adapted to suit your circumstances:

- ♦ Select a person to be searched.
- ♦ First get their permission to be searched.
- ♦ They should then be escorted to the search room.
- ♦ Always make sure that there is a witness present.
- ♦ Ask the person if they have any company property to declare - if yes, ask them to produce it.
- ♦ If the search is negative, thank them for their co-operation and allow them to leave.
- ♦ If the search is positive follow the procedure for detaining and arrest.

7. Searching a vehicle

- ♦ First determine that the vehicle is allowed to enter or exit the site.
- ♦ Always keep in mind that searching a vehicle thoroughly takes time so it is usually done quite superficially.
- ♦ A vehicle has many hiding places. Being systematic and thorough will help you to find possible hidden items. As you become experienced in this task you will discover many hiding places and you will also develop a sense of where to look.
- ♦ Taking the time to search a vehicle thoroughly can only be justified when you believe there is a good reason to do so.

7.1 Procedure to follow when searching a vehicle

- ♦ Firstly inform the people in the vehicle that they and the vehicle are liable to be searched.
- ♦ They should then be told to get out of the vehicle.
- ♦ One security officer must conduct the actual search while a second security officer stands back to supervise and observe.
- ♦ If any contraband or illegal items are found during the search, the observing security officer should record it in his or her pocket book all the details, such as the type of item, number of items, where found, and the reactions of the persons (suspects).
- ♦ If the person refuses to allow the search procedure, they will be denied access to the premises.

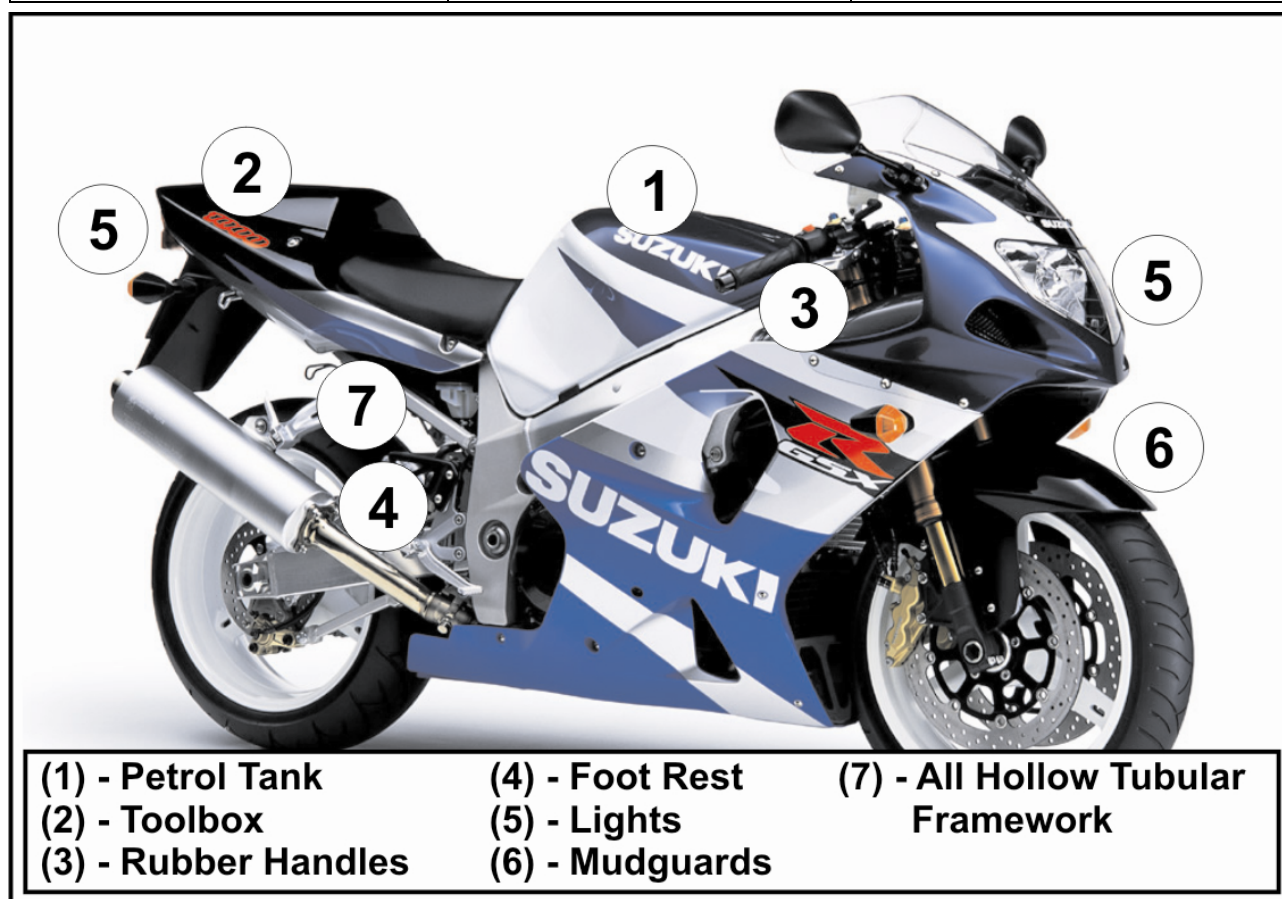

7.2 Areas to be searching in a vehicle

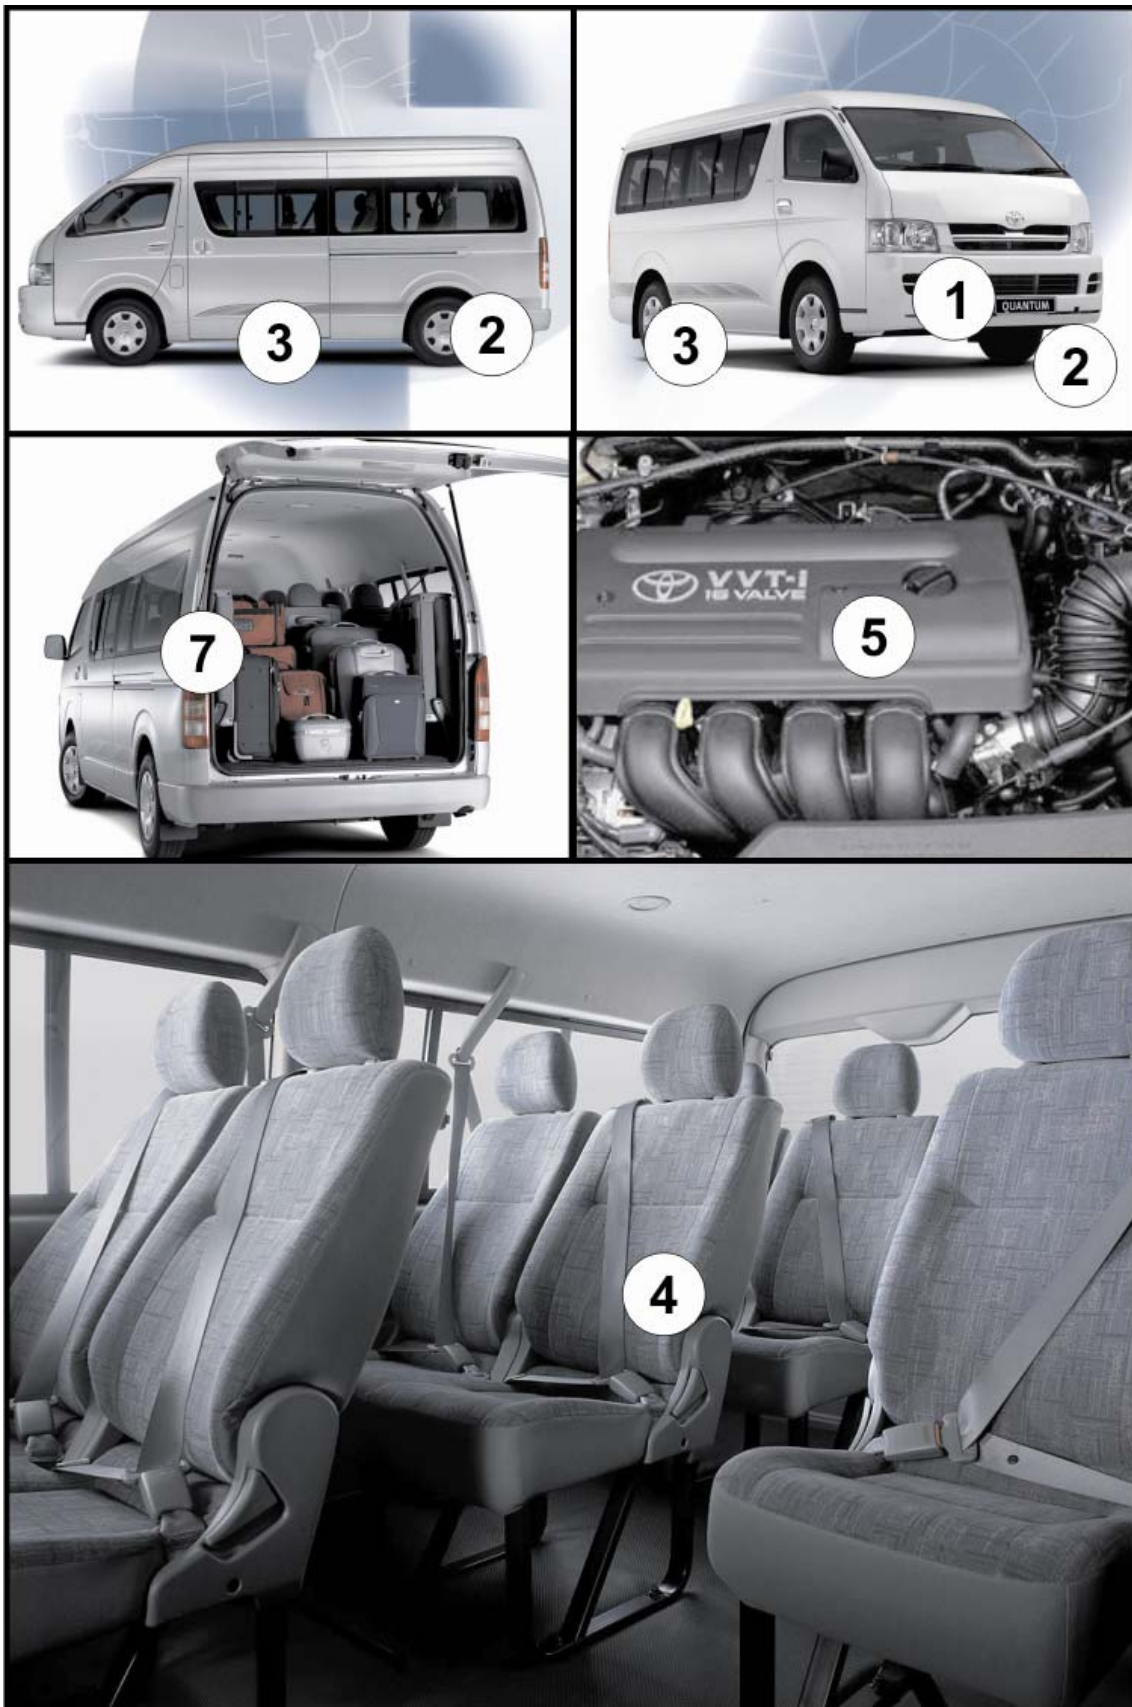

Exterior	Interior	Engine compartment	Passenger compartment	Boot
1. Number plates 2. Under mudguards and bumpers 3. Look under car for unusual additions such as welded plates or newly painted areas	4. The complete interior of the car	5. Air filter ♦ Take out battery and look underneath ♦ Heater ♦ Front grill	6. Dashboard and behind dashboard, pockets and cubby holes ♦ check weight of doors (if easily opening and closing) ♦ Window down the windows ♦ Check the seats and under the seats ♦ Check the rear window panel shelf	7. Take out spare wheel, shake it and test for weight. ♦ check the spare wheel compartment ♦ Check the tool kit ♦ Check the area between the boot and rear seat ♦ Check all luggage and parcels

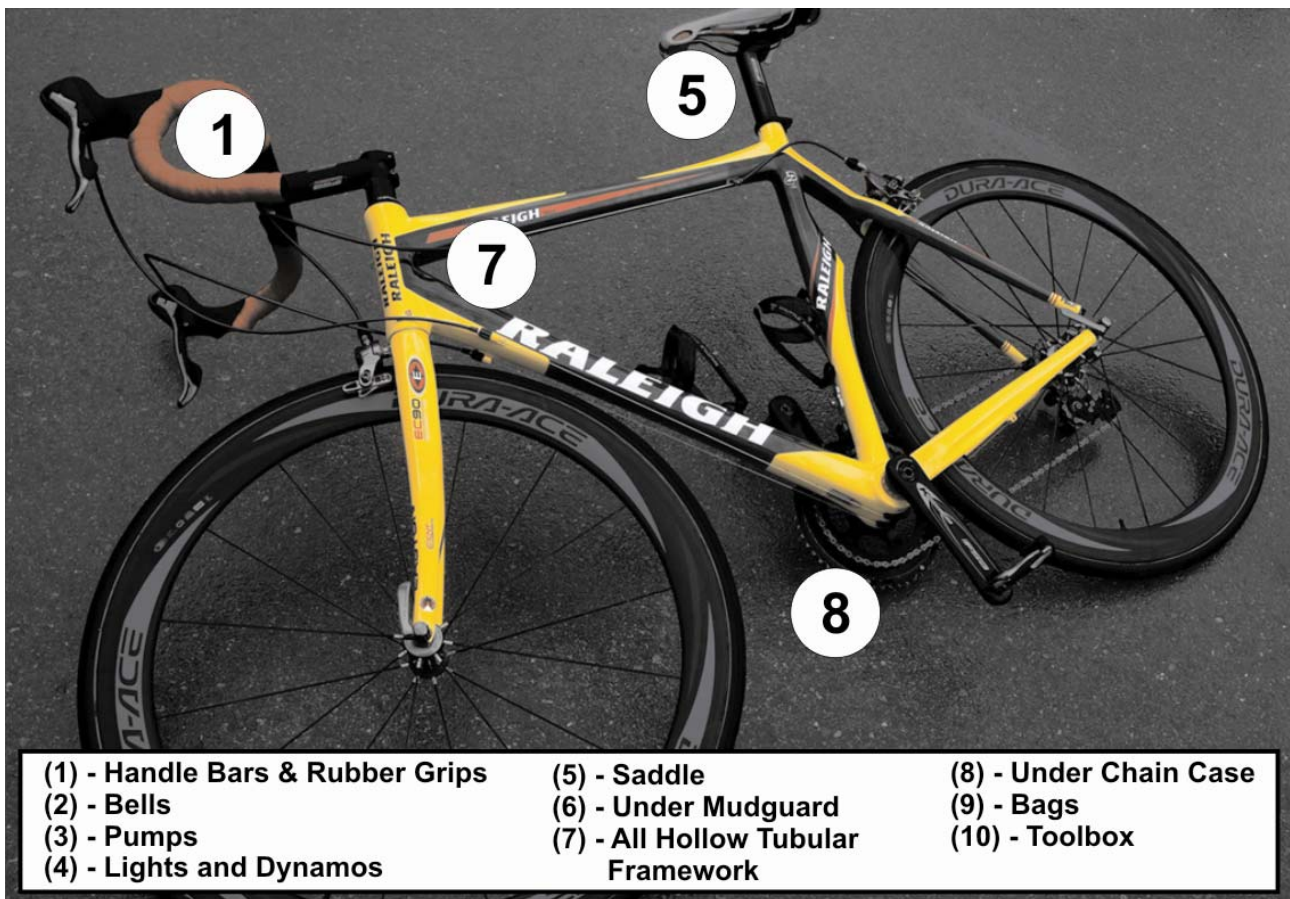

7.3 Areas to be searched in commercial vehicles, motorcycles and bicycles:

Commercial vehicles	Motorcycles	Bicycles
♦ between twin rear wheels ♦ Packing bags or containers ♦ Drive's cab ♦ Along the chassis ♦ Under the seats and spare wheel ♦ Hidden against the tail-board of a loaded vehicle ♦ Search for false bottoms in vehicles	♦ Petrol tank ♦ Toolbox ♦ Rubber handles ♦ Foot rest ♦ Lights ♦ Mudguards ♦ All hollow tubular framework	♦ Handlebars and rubber grips ♦ Bells ♦ Bicycle pumps ♦ Lights and dynamos ♦ Saddle ♦ All hollow tubular framework ♦ Under mudguard ♦ Under chain case ♦ Bags ♦ Toolbox

There is no clear legal principle regarding the searching of motor vehicles and other possessions of a person, unless, as stated above, that the person freely and voluntarily allows such a search. This applies even if the person has been lawfully arrested. Where it is accepted practice in a commercial or industrial business undertaking for spot checks and searches to be carried out as part of the security program, then these measures needs to be applied and be seen to be applied to all levels of employees from the chief executive director downwards.

Security in general has the same powers of search than a private citizen. According to Section 24 of the Criminal Procedure Act any person lawfully occupying or in charge of any land may when a police officer is not readably available search the premises and any person on the premises. Any articles found on the person must be handed over to the police. The articles may be seized when;

- ♦ there is reasonable grounds believed to be concerned in the commission or suspected commission of an offence;
- ♦ which may afford evidence of the commission or suspected commission of an offence; and
- ♦ which is intended to be used or is on reasonable grounds believed to be intended to be used in the commission of an offence.

The articles or things must be in possession of, or in the custody, or under the control of the person arrested. Once the articles are seized they must be handed over to the police.

A man or women arresting a woman can 'seize" an article found on the woman in question. There is much confusion in legal circles as to the dividing line between "seize" and "search". To remain well within the law the following guidelines are suggested;

- ♦ You may "seize" the offending article if you can see it – that is the article, or part of it is visible.
- ♦ You may not seize an article you cannot see, even if you know its exact whereabouts – for example in the pocket etc (MacKenzie et al 1983:127-128).

8. Searching of goods

- ♦ First determine if the goods are allowed onto the site, they might be prohibited items or dangerous goods
- ♦ Take enough time to conduct the search
- ♦ Make sure to look in all possible hiding places. Being systematic and thorough will help to assure finding possible hidden items
- ♦ Taking time to search goods thoroughly can only be justified if you believe there is a good reason to do so.

8.1 Procedure to follow when searching goods:

- ♦ Firstly inform the person that they and the goods are liable to be searched.
- ♦ They should then be told to make available the goods to be searched.
- ♦ If any contraband or illegal item is found during the search the observing officer should record the details such as item type, number of items, where found, and the reactions of the persons (suspect) in his or her pocket book.

If the person refuses the search procedure, he or she will be denied access to or egress from the premises.

[illegible]

STUDY UNIT 5

Escorting

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Identify the threat before undertaking an escort.
- ♦ Name the resource requirements during escorting.
- ♦ List the different security tasks during escorting.
- ♦ Explain the actions for planning and preparing for escorting.
- ♦ List the criteria when planning a route map and explain the steps when planning a route map.
- ♦ Explain contingency plans for valuables , persons or suspects.
- ♦ Identify all valuables/persons or suspects to be escorted.
- ♦ Determine classification / recent behaviour of valuables / persons or suspect and identify special needs when preparing for escort assignments.
- ♦ Perform suspect search when required according to relevant legislation.

1. Introduction

DEFINITION

Escorting is a person or vehicle (or group of these) accompanying persons, vehicles and/or goods to provide protection.

Before the security officer can start planning for an escort task he or she must identify and assess any threatening situation that might lead to loss before or during escort duties.

DEFINITION

Threat assessment is the process of gathering and assessing information about persons or groups, who may have the interest, motive, intent and capability (means) to launch an attack against the escorted valuables, people or suspects.

The goal of every security officer undertaking an escort duty must be to prevent an attack on valuables, persons or suspects. Once an assessment is made, a plan can be developed and implemented to monitor and protect the valuables, persons or suspects and to intervene, when appropriate, to prevent an attack.

A security officer will need the following knowledge to assess, and therefore be prepared for counteracting any threat:

- ♦ A contingency plan (including an evacuation plan).
- ♦ The company standing operational procedure.
- ♦ Written site specific and post instructions.
- ♦ Command structure (especially after hours).
- ♦ Backup and support systems.
- ♦ Knowledge of the environment in which the site is located.
- ♦ Knowledge of the type of business conducted at the site.
- ♦ Knowledge of the history of crime at the premises.
- ♦ A comprehensive terrain analysis, which would be conducted by the officer to ascertain the mapping of the terrain including location of buildings, shops, gates, parking venues, loading bays, etc.

2. Elements of threat assessment

As with security practices in general, an essential factor involved with escort duties is threat assessment. When conducting threat assessment the following three elements must be considered:

2.1 Progression of the threat assessment

The security officer has to follow these steps during his or her threat assessment before they can start with their escort duty:

- ♦ **Step 1:** Identify the potential threats.
- ♦ **Step 2:** Assess the identified threats.
- ♦ **Step 3:** Give priority to the threat in relation to the risk.
- ♦ **Step 4:** Evaluate the valuable, person or suspect to determine if there are any specific details that should be included in the plan.
- ♦ **Step 5:** Evaluate the route and destination to be followed during escorting
- ♦ **Step 6:** Make recommendations to reduce the risks.
- ♦ **Step 7:** Apply additional security measures.
- ♦ **Step 8:** Implement new security measures.

3. Evaluating the identified threats

When evaluating the identified threats, the security officer needs to analyse the following factors:

- ♦ Who, what, where, when and how will the threat be applied against the valuables, person or suspect.
- ♦ Verify personnel information of valuables, persons or suspects:
 - ⇒ Who is the person or suspect?
 - ⇒ What type of valuables?
 - ⇒ Classify the threat level.
 - ⇒ Classify the valuables, persons or suspects.
 - ⇒ History of valuables, person or suspect.
- ♦ Particulars of the threat:
 - ⇒ Who is posing a threat to the escorted items?
 - ⇒ Where is it likely to happen?
 - ⇒ What can be done to prevent it?
 - ⇒ Are the security measures adequate to deal with various contingencies?
- ♦ Own manpower:
 - ⇒ The officer must determine how many of his own department will be needed to conduct the escort.
 - ⇒ What measures have been taken to prevent an attack on the valuables person or suspect?
 - ⇒ How the threat and the risk is going to be managed?

4. Range of threats

The following are considered to be some of the range of threats the security officer might encounter in his daily routine:

- ♦ Theft
- ♦ Shoplifting/pilferage
- ♦ Armed robbery
- ♦ Occupational hazards

- ♦ Inadequate communication equipment
- ♦ Fire hazards
- ♦ Bombs
- ♦ Sabotage
- ♦ Industrial espionage

Having some, or all, of the following in place can counteract these potential threats:

- ♦ Emergency plan
- ♦ Fire fighting drills and procedures
- ♦ Search and observation points (CCTV, patrol officers, etc)
- ♦ Proper permit systems
- ♦ Information relevant and appropriate to the escorting of valuables, persons and suspects
- ♦ A comprehensive communication system in good working order, such as radios, telephones, intercom systems, video cameras etc

5. Types of escort duties

In your career as a security officer you will at some stage have to perform escort duties.

It is important that you understand that there are different types of escort duties that you will be expected to do.

5.1 Valuables or goods. In some instances the security officer will not be responsible for the valuables or goods themselves, but for the person who is carrying them.

Valuables or goods can include the following:

- ♦ Documents
- ♦ Precious stones
- ♦ Jewellery
- ♦ Trophies
- ♦ Bullion
- ♦ Cash
- ♦ Electronic equipment
- ♦ Firearms
- ♦ Artwork
- ♦ Mining debris (rubble) etc

5.2 Suspects.

A suspect may be someone who is in a restricted area and has to be escorted out of the building. Or a suspect could be a person who has been caught in a criminal act and needs to be escorted to a place of safe keeping where he will be handed over to the police.

5.3 Persons or visitors. For example, a visitor who needs to be escorted from the reception security area at the entrance of the premises to a specific location such as a boardroom or some other meeting place.

It is also sometimes expected that the security officer does static guard duty at a meeting room and then escort the visitor back to his vehicle.

A visitor could be a person who is visiting one of the staff members of the company on official business and has to be escorted by a security officer to the staff member's office.

The following are typical visitors that a security officer will encounter daily:

- ◆ Someone delivering a package
- ◆ A person attending a meeting
- ◆ A person who has been summoned by another
- ◆ Contractors rendering maintenance service
- ◆ Telecommunication services
- ◆ City council officials
- ◆ Occupational health and safety inspectors

6. Range of escort fields

Escorting can take place between the following venues, for example:

- ◆ Valuables or goods from the control room to the point of delivery.
- ◆ Visitors can be escorted from the control room to the office where the meeting will take place.
- ◆ In the case of an arrest, from the place of arrest to the control room.

The security guard, who has been appointed in charge of the escort, must select the equipment and/or vehicles that will be needed for the task. Different types of escorting will need different types of equipment and vehicles.

These may be as follows, although it will also depend on the standard operation procedure of the particular company:

Valuables or goods. Vehicles that will be used to escort valuables or goods may include trucks, long base trucks, armoured vehicles etc. This will depend on the value and size of the valuables or goods. Equipment will be the normal security equipment that a security officer is issued with, and may include:

- ◆ Baton
- ◆ Weapon
- ◆ Flashlight
- ◆ Radio

Suspects. Will be transported by sedan or bus depending on the number of suspects to be escorted. Back-up personnel may also be needed depending on the suspect and the threat assessment that has been done. Equipment will be the normal security equipment used plus restraints, such as handcuffs or leg-irons and the security officer's firearm.

Persons or visitors. May be escorted in person on foot or by vehicle depending on the distance and the status of the visitor. Equipment will be the normal prescribed security equipment for the specific site requirement and according to the company's standard operating procedure. But when a VIP is being escorted, a re-assessment of the equipment has to be made.

The security officer will receive operational instructions from the control room before the escort is undertaken. These will instruct the security officer on how the escort must take place, for example:

- ♦ Food escort, which may include visitors, goods, suspects, etc.
- ♦ Vehicle escort, which may be for visitors vehicles, transport vehicles, etc.

Before the security officer can start with the escort he must ensure that he adheres to the policies and procedures with regard to escorting as stipulated by the company. An example of this is the company's transport policy.

The security officer must know what to do in the case of an accident or in the case of a break down which might be that the security officer has to inform the control room immediately, complete a vehicle accident checklist and his pocket book accordingly. On arriving back at the control room the checklist must be signed and handed back. The security officer must always refer to the site-specific instructions because standard operating procedures may differ from company to company.

7. Escort categories

Security escort tasks can be divided into three categories.

The category, and what is being escorted, will determine how many vehicles and security officers will be necessary during the escort.

- ♦ Category 1: Escorting of vehicles will need two (2) security officers and one (1) vehicle.
- ♦ Category 2: Escorting of suspects will need two (2) security officers.
- ♦ Category 3: Escorting of persons or visitors will need one (1) security officer.

8. Preparing for escort

In the operational instruction, clear guidelines will be given with regard to what type of vehicle must be used for the escort. It is no the responsibility of the security officer to hand in a formal requisition to the control room for the specific type of vehicle to be made available on the day of the escort.

Example of a vehicle requisition	
Name of driver:	
License number:	
Date when needed:	
Time when needed:	
How many passengers:	
Reason for "request":	
Operational instruction number:	
.....	
Date of request:	Signature of security officer
.....	
Date of request:	Signature of control room

The operational instruction will also give clear guidelines as to what category the escort will fall under. Should it be a category 1 escort and two (2) security officers are needed, the responsible security officer also has to request the additional manpower. During the threat assessment the officer will have determined whether additional manpower is needed. This request will also go through to the control room.

The additional planning and preparation that has to be done by the security officer in charge is the escort mode and the route plans.

Escort Mode. The escort mode will be stipulated in the operational instruction whether it will be on foot or by vehicle.

Route Plans. When the security officer have received instructions as to whether the escort will be on foot or by vehicle he/she must start planning the route that is to be followed. The following must be determined:

- ♦ Shortest and safest route.
- ♦ Security officer knows the area in which the escort will take place.
- ♦ Intersections that might pose a threat and what the escorting officer is going to do about it.
- ♦ Dangerous locations situations for example taxi ranks, road works, etc.

9. Criteria when planning a route map

The route map may vary from one to another as it depends on the type of escort that is to be executed. If it is a standard operating procedure, these route maps can often be obtained from the control room. A typical route map will contain at least the following:

- ◆ Floor plan of a building

Road map of a public or private road. After the security officer has determined the route the escort will be following, the security officer must complete a basic escort plan. This should have the following information in it:

- ◆ Time and date of departure.
- ◆ Estimated time of arrival.
- ◆ Threats that might have an influence on the safety of the escort:
 - ⇒ Accident
 - ⇒ Breakdown
 - ⇒ Fire
 - ⇒ Hijack
 - ⇒ "Traffic jam"
 - ⇒ Armed robbery
- ◆ Should the escorting officer have to stay over night the following arrangements must be considered:
 - ⇒ Secure area for goods.
 - ⇒ Safe room for a suspect.
- ◆ The drop-off site/location for rubble at, for instance, mining premises.
- ◆ Vehicle that will be used to escort the transport from or around the premises, registration number, mileage reading, etc.
- ◆ Effective communication security before, during and after the escort is of utmost importance. It is importance that all information remains confidential at all times.
- ◆ Before the escort begins, all the information about the escort, such as time of departure, estimated time of arrival, route etc must be communicated to the control room.
- ◆ During the escort two-way-radios will be used. The officer will communicate directly with the control room and also with other escorting vehicles, should there be any. Correct radio procedures have to be applied at all times during the escort.
- ◆ After the escort the security officer will probably have to hand in his pocket book to the control room, although this will differ from site to site.
- ◆ The following information should be in the pocket book and the security officer must ensure that the information in the "pocket book" is the same as is entered in the occurrence book:
 - ⇒ Time of departure
 - ⇒ Time of arrival
 - ⇒ Incidents e.g. loss or damage to valuables
 - ⇒ Complaints
 - ⇒ Behaviour of suspects

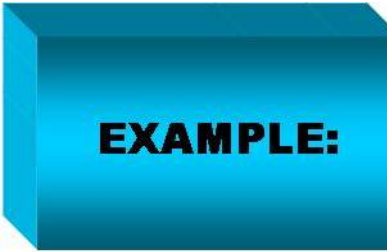

10. Contingency plans for valuables, persons or suspects.

After the escort plan has been determined the security officer in charged has to now plan for contingencies. In other words this will be the “back-up plan” should anything go wrong.

EXAMPLE OF CONTINGENCIES PLAN		
Accident	Fires	Armed attack and taking of hostages
1. Inform control room.	1. Contact the control room immediately.	1. If possible, inform the control room.
2. Follow instructions of control room.	2. Extinguish the fire with the nearest suitable apparatus.	2. Try not to become involved.
3. Stay calm.	3. Avoid all smoke filled areas.	3. Follow instructions.
4. Help the injured.	4. Security the valuables, persons or suspects.	4. If taken hostage, it is best to lie flat or sit on the floor.
5. Do not hamper the professional emergency personnel e.g. fire brigade, paramedics.		5. Do not resist.
6. Stay with the vehicle.		6. Stay calm.
7. Complete a report on vehicle accident		7. SA Police Service will handle the situation
		8. Also refer to learner reference guide for incident management.

Emergencies plans must also be drawn up for breakdowns.

Breakdown	
1. Inform control room.	
2. Follow instructions of control room.	
3. Contact the recovery or towing vehicle.	
4. Move the vehicle out of danger (off the road).	
5. Stay with the vehicle at all times.	
6. Fill in the report on a vehicle accident/breakdown form supplied to you according to standard operating procedures.	

11. Identify all valuables/persons or suspects

Before the escort can begin, it is important for the security officer to identify all valuables / persons or suspects. This can also be done by means of a checklist and the following information might be in the checklist.

EXAMPLE OF CHECKLIST		
Suspects	Valuables	Person
1. Trespasser	1. Document	1. Visitor
2. Thief	2. Previous stone	2. Delivery person
3. Robber	3. Jewellery	3. Mail man
	4. Trophy	4. Shop attendant
	5. Bullion	5. Customer
	6. Cash	6. Repair technician
	7. Electronic equipment	
	8. Firearm	
	9. Artwork	
	10. Mining debris or waste	

12. Determine classification / recent behaviour of valuables / persons or suspect

It is important to determine whether there are special needs or requirements for the escort. These needs could be:

- ♦ **Category 1:** Vehicles: for examples, an armoured vehicle, or more than one vehicle.
- ♦ **Category 2:** Suspects: for example special restraints. The suspect might be very violent, or ill or disabled. It is also important to determine the language and culture of the suspect. The security officer must be able to communicate with the suspect at all time, so he might need an interpreter.
- ♦ **Category 3:** Goods: how should the goods be handled, packed, transported and delivered.

Suspect searched when required according to relevant legislation, taking into account suspects' gender and Occupational Health and Safety requirements.

13. Suspect search

There are 3 categories of searching, namely:

- ♦ **Frisk:** This is a field search or quick body search and can be conducted by a security officer on the premises. However, only a female shall search another female, and any searching of a person should be conducted in an orderly and decent manner.
- ♦ **Strip:** This usually happens in a prison and is either conducted by the police in private, or in prison-by-prison wardens. Security officers will never conduct these searched.
- ♦ **Body cavity:** Should the security officer feel that a suspect is hiding goods in parts of his body cavities, the police should be contacted, and the suspect must be escorted to a medical doctor (district surgeon) that will do a body cavity search. Security officers should never engage in this type of search.

When a security officer has caught a suspect and the officer is suspicious that the suspect might have stolen an item or might be in possession of a weapon, the security officer is allowed to frisk the suspect. Should the suspects be female, a female security officer must frisk her. However the security officer must at all times follow the Criminal Procedures Act and frisking should take place in private.

The security officer should never have a weapon with him when conducting a search, because the suspect could grab it and use it to make his escape, or he may kill the security officer in the process.

Another officer must be present to observe everything (especially unlawful items) found in the pockets and clothing of the suspect and should note it in his pocket book in complete detail.

The security officer must apply the following techniques when searching visitors and suspects:

◆ **Visitors**

- ⇒ Visitors lift their arms horizontally to the sides and must be scanned with a scanner.
- ⇒ Visitors lift their arms and just get patted down.
- ⇒ A visitor is searched, not so much to find illegal items such as drugs, but to find site-prohibited items. If it is unlawful to take a firearm onto the premises, the aim of the visitor search would be to discover firearms being taken illegally onto the premises

◆ **Suspect**

- ⇒ Suspect must face the wall with his hands leaning against the wall and the be frisked.
- ⇒ A suspect may be handcuffed when arrested on the premises and then be escorted to the control room.
- ⇒ Should the suspect resist arrest he may be subdued by the security officer using absolute minimum force in accordance with the force continuum.
- ⇒ Should a suspect run away the security officer is not allowed to shoot at him.

[illegible]

WORDS/ACRONYMS	EXPLANATION OF ACRONYMS
ASSESSMENT	"A structured process of gathering evidence and making judgments about an individual's performance in relation to registered national standards and qualifications"
ASSESSMENT CRITERIA	It describe the evidence that is needed to show that the learner has demonstrated the outcome correctly. A list of evidence to be supplied by the candidate as proof of his / her ability to integrate all of the competencies listed earlier in the standard.
COMPETENCE	Competence is the ability to do certain things in a range of different environments with knowledge and understanding about what is being done and the effect this has on others. It includes <u>Knowledge, skills, attitudes, values and ethics.</u>
CREDIT	Each unit standard is worth a number of credits which gives an indication of the size and scope of the unit standard, the standard is worth. (1 credit = 10 notional hours of learning)
CRITICAL CROSSFIELD OUTCOMES	critical cross field outcomes is to direct educational activities towards development of the learners within a social and economic environment.
EMBEDDED KNOWLEDGE	Body of theory essential for understanding and applying the standard. Principles, methods and techniques that would underpin good practice of this unit standard.
EVIDENCE	Evidence is a set of information or observations that provides proof of the learner's competence.
FORMATIVE ASSESSMENT	Aims to assist the learner to identify any knowledge/skills gaps when demonstrating his/her current competence. Diagnostic assessment supports learning and progress of the learner.
INTEGRATED ASSESSMENT	Integrated assessment refers to: • assessing a number of outcomes together • assessing a number of assessment criteria together • assessing a number of unit standards together • using a combination of assessment methods and instruments for an outcome/s • collecting naturally occurring evidence in the workplace • Acquiring evidence from other sources such as supervisor's reports, testimonials, portfolio of work previously done, logbooks, journals etc.
LEARNING ASSUMED TO BE IN PLACE	Building blocks (knowledge, skill and understanding) assumed to be in place
LEARNING PROGRAM	A "learning program is a set of learning activities in which the learner will be involved in working towards the achievement of one or more outcomes.
LEVEL	Each unit standard is registered on the NQF at a particular level based on the complexity of the outcomes and stringency of the standards.
NQF	National Qualifications Framework
RANGE STATEMENTS	The range statements indicate detailed requirements of the assessment criteria.

RE-ASSESSMENT	• The same method and instrument may be used, but, the task and materials should be different • The task and materials should, however, be of the same complexity and level as the previous ones. • In case the methods and instruments are changed it must be ensured that they are appropriate for the outcomes specified.
RPL ASSESSMENT	RPL is a way of recognizing what individuals already know and can do. The basic premise underlying it is that people, especially mature adults, learn many things inside and outside the formal structures of education and training and that irrespective of where, how and when learning was acquired, subject to assessment, it can be worthy of recognition and credit.
RPL	Recognition of prior learning
SASSETA	Safety & security sector education and training authority.
SAQA	SOUTH AFRICAN QUALIFICATION AUTHORITY
SPECIFIC OUTCOMES	An outcome is a statement that describes the required competency that must be demonstrated by the learner on successful completion of a training intervention. Key performance areas in the standard are given, the focus is <i>not</i> only on current competence, but also on future competence in this standard.
SUMMATIVE ASSESSMENT	Assessment used to record the level of competence achieved by a learner over a period of time, e.g. at the end of a program, term or year.
QUALIFICATIONS	Represent a planned combination of learning outcomes which has a defined purpose and intended to provide learners with applied competence and a basis for further learning
UNIT STANDARDS	the “building blocks” of qualifications. All qualifications are plotted on the National Qualifications Framework (NQF). “A statement of the outcomes that the learner must achieve to earn credit. Standards are nationally agreed and internationally comparable.”

PURPOSE OF THE UNIT STANDARD

The purpose of this unit standard is to equip learners with the necessary skill, knowledge and attributes that will enable them to man an access control point. They will also be able to execute access control duties in a manner that will contribute towards the safety of an organisation or environment. The competencies outlined in this unit standard will also lead to the minimising of physical losses for an organisation. This unit standard will enable security personnel who are working at an access control point to control vehicles, goods and persons as they enter or leave the security area with the ultimate purposes of safeguarding the organisation against external threat and potential losses.

A person credited with this unit standard will be able to:

- Explain access and egress control functions.
- Control people, vehicles and materials at an access and egress control point.
- Search people, goods and vehicles.
- Escort authorised persons and vehicles.

LEARNING ASSUMED TO BE IN PLACE AND RECOGNITION OF PRIOR LEARNING

- Communication at NQF Level 2 or equivalent.
- Unit Standard: "Apply legal aspects in a security environment".

UNIT STANDARD RANGE

- Access control refers to the entering of premises while egress refers to the exiting of premises.
- A given situation may refer to but is not limited to role-plays, structured scenarios, case studies and given scenarios.
- For the purposes of this unit standard all methods and processes must be applied in line with legal prescripts and prescribed operating procedures.

UNIT STANDARD OUTCOME HEADER

N/A

Specific Outcomes and Assessment Criteria:**SPECIFIC OUTCOME 1**

Explain access and egress control functions.

ASSESSMENT CRITERIA**ASSESSMENT CRITERION 1**

Access and egress control functions are described in terms of authorised and unauthorised persons, vehicles and goods.

ASSESSMENT CRITERION RANGE

Functions refer to functions used when entering and leaving a secured area.

ASSESSMENT CRITERION 2

Types of positive identification systems used on access control sites are identified to determine when which systems should be used.

ASSESSMENT CRITERION RANGE

Types of positive identification systems may include but are not limited to manual operated systems and electronic operated system (visual, audio and biometric), physical and computer systems used for positive identification of people vehicles and goods.

ASSESSMENT CRITERION 3

Methods in which access and egress control can be conducted are described in line with potential risk and threat and client requirements.

ASSESSMENT CRITERION RANGE

Potential risks and threats may include but are not limited to the level of threat in comparison to the financial resources needed to implement a specific access control measure.

ASSESSMENT CRITERION 4

The importance of portraying a client-focused approach is explained in an access and egress control environment.

ASSESSMENT CRITERION 5

Emergency access and egress control procedures at a given site are described in order to contribute towards emergency preparedness.

SPECIFIC OUTCOME 2

Control people, vehicles and materials at an access and or egress control point.

ASSESSMENT CRITERIA**ASSESSMENT CRITERION 1**

A positive identification is made in accordance with the prescribed access and egress control procedure.

ASSESSMENT CRITERION 2

Unauthorised and authorised persons, vehicles and goods are managed in accordance with the access and egress control procedures for a given site.

ASSESSMENT CRITERION 3

The reasons why the movement of persons, vehicles and goods must be recorded manually and or electronically are explained in terms of the effect on the security of a site.

ASSESSMENT CRITERION 4

Observation techniques are applied at a given site in order to detect potential safety and security risks and threats.

ASSESSMENT CRITERION RANGE

- Risks may include but are not limited to security risks, and OHS related risks.
- Observation may include but is not limited to the observation of vehicles, persons and goods as well as the surveillance through electronic detection systems and physical observations.

SPECIFIC OUTCOME 3

Search persons, goods and vehicles.

ASSESSMENT CRITERIA**ASSESSMENT CRITERION 1**

Potential risks and threats are identified by searching and observing persons, goods and vehicles.

ASSESSMENT CRITERION 2

The reasons for searching persons, vehicles and goods are explained in terms of access and egress control principles.

ASSESSMENT CRITERION 3

The movement of authorised and unauthorised persons, vehicles and goods are controlled in a given situation.

ASSESSMENT CRITERION RANGE

- Authorised and unauthorised goods may include but is not limited to company property, assets, dangerous goods, hazardous goods and dependence forming drugs.
- Hazardous substances may include but is not limited to hazardous chemical substances, radioactive substances, dangerous goods may include but is not limited to explosive substances, dangerous weapons, firearms.

ASSESSMENT CRITERION 4

Authorised items are differentiated from unauthorised items at a given access and egress control point.

ASSESSMENT CRITERION NOTES

Items required to be kept at access or egress control point are secured and returned to legal owner in same condition as received in accordance with legal prescripts and prescribed operating procedures.

ASSESSMENT CRITERION 5

Searching techniques are conducted in order to identify authorised and or unauthorised items.

ASSESSMENT CRITERION RANGE

Searching techniques may include but is not limited to searching with due regard to decency, respecting the privacy of individuals, obtaining consent and following a systematic approach in line with legal prescripts and prescribed operating procedures.

ASSESSMENT CRITERION 6

Methods of controlling authorised and unauthorised items are identified and applied in a given situation.

SPECIFIC OUTCOME 4

Escort authorised persons, goods and vehicles.

OUTCOME RANGE

- Escort may include but is not limited to accompanying persons, goods and vehicles in reaching their destination on a given security premises.

- Escorting does not refer to close protection escorting practices or assets in transit practices.

ASSESSMENT CRITERIA

ASSESSMENT CRITERION 1

Environments, persons, goods and vehicles are observed in order to identify potential risks and threats pertaining to the escorting function.

ASSESSMENT CRITERION 2

Reasons for escorting authorised persons are explained in relation to the restriction of access to unauthorised areas.

ASSESSMENT CRITERION 3

Reasons for knowing site lay-out and personnel locations are explained in order to escort to correct destination.

ASSESSMENT CRITERION 4

Authorised persons are escorted in line with escorting principles in a given situation.

ASSESSMENT CRITERION RANGE

Escorting principles may include but is not limited to keeping persons in visual contact, reaching destination, delivery of person.

UNIT STANDARD ACCREDITATION AND MODERATION OPTIONS

- An individual wishing to be assessed (including through RPL) against this unit standard may apply to an assessment agency, assessor or provider institution accredited by the relevant ETQA.
- Anyone assessing a learner against this unit standard must be registered as an assessor with the relevant ETQA.
- Any institution offering learning that will enable achievement of this unit standard or assessing this unit standard must be accredited as a provider with the relevant ETQA.
- Moderation of assessment will be conducted by the relevant ETQA at its discretion.

UNIT STANDARD ESSENTIAL EMBEDDED KNOWLEDGE

- Current sections of the Firearms Control Act 60 of 2000 that deal with the safekeeping and storage of firearms.
- Current section of the Criminal Procedures Act 51 of 1977 which deal with access and egress control and law search and seizure (currently section 23).
- Current sections of the Dangerous Weapons Act that deal with restriction of weapons.
- Current sections of specific Acts specific workplace environments:
 - > National Key Points Act, Civil Aviation Offences Act.
- Current sections of the Constitution that deal with access and egress control.
- Current sections of the Trespass Act which deal with access and egress control.
- Current sections of the Road Traffic Act which deal with access and egress control.
- Current sections of the Access to Public Premises Act which deal with access and egress control.
- Current sections of the Fencing Act which deal with access and egress control.
- Current sections of the General Law Amendment Act that deal with access and egress control.
- Current sections of the SIRA Act 56 of 2001.
- Current sections of the Occupational Health and Safety Act that deal with access and egress control.
- Context Specific:
 - > Training provider user manuals.
 - > Specifications, agreements and policies and procedures.
- Resources required for Assessment:
 - > Safety equipment and protective uniform/clothes.
 - > Communications equipment.
 - > Necessary administrative and stationary issue.
 - > First aid/fire fighting equipment and relevant access/egress screening equipment.
 - > Visitors/contractors.
 - > Delivery/visitor vehicle.
 - > Criterion referenced assessment instructions/tools.

- > Operating procedures and security principles.
- > The application of access/egress control techniques.
- > Search and seizure procedures and techniques.
- > Affecting a lawful arrest.
- > Physical restraining techniques.
- > Written reports.
- > Permit systems.
- > Site-specific access and egress control equipment.
- > Practical communications.
- > Interpersonal skills.

UNIT STANDARD DEVELOPMENTAL OUTCOME

N/A

UNIT STANDARD LINKAGES

N/A

Critical Cross-field Outcomes (CCFO):**UNIT STANDARD CCFO IDENTIFYING**

Identify and solve problems pertaining to the control of people, vehicles and materials at an access and egress control point and when searching people, goods and vehicles.

UNIT STANDARD CCFO WORKING

Work effectively with all role-players in the process of effecting of access and egress control activities.

UNIT STANDARD CCFO ORGANISING

Organise oneself and one's activities so as to be ready at all times to implement access and egress control as per requirements.

UNIT STANDARD CCFO COLLECTING

Collect, analyse, organise and critically evaluate information relating to the control of people, vehicles and goods at a control point.

UNIT STANDARD CCFO COMMUNICATING

Communicate effectively with people during the implementation of access and egress control measures.

UNIT STANDARD CCFO SCIENCE

Use science and technology to effect access and egress control.

UNIT STANDARD CCFO DEMONSTRATING

Understand the world as a set of related systems where the poor implementation of access and egress control can have negative and security impact on the organisation.

UNIT STANDARD ASSESSOR CRITERIA

N/A

UNIT STANDARD NOTES

This unit standard replaces unit standard 11496, "Ensure asset protection through access and egress control", Level 3, 10 credits.

Material compiled by: Training Dynamics Africa

HOW THIS LEARNER WORKBOOK IS COMPILED

This learner workbook has been compiled to equip learners with the necessary skill, knowledge and attributes that will enable them to man an access control point. They will also be able to execute access control duties in a manner that will contribute towards the safety of an organisation or environment.

A person credited with this unit standard will be able to:

1. Explain access and egress control functions.
2. Control people, vehicles and materials at an access and egress control point.
3. Search people, goods and vehicles.
4. Escort authorized persons and vehicles.

You have to study the content and guidelines given in your learner reference guide to complete this workbook.

Remember that this completed workbook must be handed in as it will form part of your formative assessment and will play a role in awarding you the required 07 credits that are to be achieved upon completion of this module.

Write neatly and legibly and ensure that you do not simply copy the information contained in the learner reference guide into your workbook. Give your own opinion and ideas where applicable and write the answers in your own words to indicate your level of understanding and learning.

Good luck with the completion of this workbook.

LEARNING UNIT 1

Access and Egress Control

LEARNING OUTCOMES

A learning credited with this unit will be able to:

1. Define access control.
2. Explain the purpose for access control.
3. Explain the objectives of access control and egress control.
4. Explain the meaning of outer layer protection.
5. Identify and demonstrate knowledge and skills in the use of the various access control methods/aids.
6. Identify and demonstrate knowledge and skills in the use of the various access control identification system.
7. Explain the relation between access control measures and internal and external threats.
8. Explain the role of access control in the event of an emergency.

LEARNER ACTIVITY 1 (page 13)**Explain the purpose of having access control and egress control functions at a building.**

Just as every building has its own personality, each building also has its own unique movement control requirements. Failure to recognise this element of facility control can be not only expensive, but also disastrous. As security managers review the loss potential of their buildings, consideration must be given to the movement and control of people within its confines. An access and egress control system designed to complement the manufacturing procedures will go a long way towards reducing losses and making the other protective systems efficient and cost effective. Management directives and policies are designed to meet a variety of conditions. The access control system must show this same flexibility in order to provide predictable regulation and monitoring of the movement of people and access (Cherry 1986: 157).

Control of access to specific areas within a building is particularly important where the general public is admitted. Generally speaking, it is not necessary to install walls, partitions, doors or windows to the same high security specifications that apply at the perimeter of the building. Mechanical combination locks, or electro-mechanical locks operated by personal codes or access control cards and fitted to standard doors will normally suffice in maintaining a "need to be here" principle. One exception to this arises where the general public interfaces with employees who have direct access to substantial amounts of cash or valuables. In such cases there is an additional risk (Hearnden & Moore 1996:48).

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 14)**Explain the objectives of access control.**

- ♦ Permit or deny entry to or presence in a given place;
- ♦ Increase or reduce the rate or density of movement to, from or within a defined place;
- ♦ Protect persons, materials or information against unauthorised observation or removal; and
- ♦ Prevent injury to people or damage to material (Auerbach 2003:187).

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 3 (page 14)**Explain the objectives of egress control.**

- ♦ To ensure that company assets are not taken out of the premises without the necessary approval; and
- ♦ It creates an additional layer of protection and acts as a crime deterrent i.e. employee theft, shoplifting etc.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 15)

Provide a detail explanation of at least four outer layers of protection.

Demonstrate your understanding by providing three examples of each which can be found at your workplace.

Perimeter Barriers

According to Fay (2006:157) the security advantages of barriers are;

- ♦ To control the movement of people, vehicles into, out of, within the facility;
- ♦ Segregate or compartmentalize sensitive areas; and
- ♦ Provide physical protection to objects, materials, and processes of a critical nature.

Facility Security Controls (General)

Just as every building has its own personality, each building / facility has its own unique movement control requirements. Failure to recognise this element of facility control can not only be expensive, but also disastrous. As security managers review the loss potential of their buildings, consideration must be given to the movement and control of people within its confines.

Security Lighting

Illuminating a site or building perimeter will not delay an intruder, but an intelligently designed installation may increase the deterrent factor. If it is used in conjunction with CCTV good lighting will certainly assist in detecting unwelcome visitors. There are many factors to consider when planning a strategy for security lighting. Here are some of the most important;

Which areas need to be illuminated? The key areas for consideration are;

- ♦ The site boundary or perimeter including external car parks;
- ♦ The open areas between the perimeter and the building(s);
- ♦ Pedestrian and vehicle access points; and the
- ♦ Building interior.

Vehicle Control

Vehicle control should be precise and conform to the protection requirements of the facility. Vehicle movement monitoring is primarily designed to alert a dispatcher in shipping and receiving of the arrival or departure of a vehicle (Cherry 1986: 116).

Visitors Control

♦ Turnstile

It can also be made so as to enforce one-way traffic of people, and in addition, it can restrict passage to people who insert a coin, a ticket, a pass, or similar. Thus a turnstile can be used in the case of paid access (sometimes called a fare gate when used for this purpose), for example public transport as a ticket barrier or a pay toilet, or to restrict access to authorized people, for example in the lobby of an office building.

♦ Road Blockers

Road Blockers can be used to ensure that vehicles do not enter or leave your premises without your permission. With a wide variety of applications, road blockers can prove particularly useful on sites with limited access space.

♦ Bollards

Bollards have numerous uses. They can be used for ornamentacar-parking security, to reserve parking paces or to restrict accemanual (collapsible or telescopic) and hydraulic bollards that caa range of access control methods.

♦ Speed Ramps

Used to control the speed of flow of traffic, for example, on cons shopping centers etc.

♦ Boom gates

Suitable for commercial applications and for car parks where heavy duty open/close operations are required.

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 5 (page 26)

Explain three identification system that can be used to offer effective access and egress control.

Employee Badges (Cards) and Visitor Passes

A basic and time honoured access control tool is the employee identification card or badge. A workplace with few employees and low security needs may choose to rely on personal recognition as an alternative to the identification badge, but a workplace with more than a few employees will find the identification card useful. The control of visitors works differently. Visitor passes issued at an entry control point substitute for identification cards. Visitor passes are typically constructed of paper. The pass is dated and issued for a set period; usually one day is applied for at a reception or security desk, and requires the visitor to present a form of photo identification i.e. drivers licence, ID book etc.

A condition of issuance may be approval by an employee. In some situations only certain employees are allowed to approve visitor access, and the day and time of visit must be pre-arranged. In medium to high security situations, the visitor are escorted while inside the facility. In a safety sensitive workplace, a visitor may have to undergo a briefing, view a film, sign a release, and put on protective apparel such as a hard hat, safety glasses, and steel toed boots. There must be a record of the visit.

Identification Cards

- ♦ **Hollerith:** This very early form of access card has small holes that can be read by a light source or contact brushes. Today's use of Hollerith cards is pretty much limited to hotel security. The guest slides the card into a slot above the door handle. The lock disengages when a reading of a card matches a guest's registration at the lobby desk. This very simple technology is usually not suitable for higher level security.
- ♦ **Magnetic stripe:** This type of card has a data encoded stripe on one face. When the card is withdrawn from or swiped through a reader, the stripe passes over a magnetic head not unlike that of a tape player. The code on the stripe is compared to access criteria that were earlier entered into the system. Access criteria reflect the cardholder's identity, the areas the cardholder is authorised to enter, and time frames for entry (normal operating hours, evening hours, weekends, holidays). Compared to other card types, the magnetic stripe cost less and can hold a large amount of data. However the magnetic stripe can wear out or become damaged over time, and the vinyl plastic construction of the card can lead to chipping and breaking.

- ♦ **Barium ferrite:** This type of card is sometimes called a magnetic spot card or magnetic sandwich card. It is cut from three layer plastic stock. The middle layer or core is barium ferrite that has been magnetized with a pattern of dots arranged in a readable pattern. The pattern is code fixed by the magnetic polarity of the spots. The barium ferrite card is slightly more expensive than the magnetic stripe card. It is also subject to problems resulting from wear and tear, and is vulnerable to deciphering.
- ♦ **Bar code:** This card bears on one side (usually the front) a series of lines forming a code readable by an optical scanner. The pattern of lines looks very much like the pattern of lines found on the outside of supermarket items. Because a bar code is easy to duplicate, it is not suitable for good security practice.
- ♦ **Wiegand:** The Wiegand card is also called an embedded wire card. The technology is based on the Wiegand effect, a phenomenon observed when specially prepared ferromagnetic wires suddenly reverse themselves upon exposure to an external magnetic field. Wires inside the Wiegand card are formed in a permanently tensioned helix twist. The order and the spacing of the wires establish a unique code for each card. The magnetic reversals in the wires are converted into distinct, consistent electrical pulses that are read and processed. The card's thickness and composition of stock make it resistant to pocket damage. It is, however, susceptible to malfunction arising from wear after many passes through reader slots.
- ♦ **Proximity:** The proximity card has an embedded microcircuit that emits frequencies detectable by a reader. The reader reacts to frequencies when the card is placed in close proximity. Sturdy composition makes the card resistant to tampering and interfering effects of weather and shock. Two other features of the card make it attractive. The emitted frequencies are sufficiently powerful for the reader to be concealed behind a thin wall or mounted inconspicuously (possibly for aesthetic reasons), and the card can work through clothing or a handbag.
- ♦ **Smart Card:** Regarded as the card of the future, the smart card contains its own processor, making it capable of running its own internal programs. The very large amount of data that can be contained in a smart card allows it to serve purposes that go beyond access control. For example, the cardholder's medical history can be stored for quick retrieval in medical emergency and cashless purchases is recorded. The downside of the smart card is cost. On the other hand it offers several advantages; the card is durable and tamper resistant, counterfeiting and duplication are difficult, encryption presents an obstacle to compromising the code, the card can be programmed to expire on a certain date, and smart card technology is suitable for many applications (Fay 2006: 178-180).

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 6 (page 38)**Discuss the role of access control officers during an emergency situation.**

Specific site access control procedures should clarify the following with regard to emergency situations;

Access control procedures should clearly state who should be allowed in the Emergency Control Centre.

- ♦ **Medical Emergencies:** Access should be controlled at medical scenes to ensure that the paramedics can perform their duties without interference from bystanders.
- ♦ **Fire Emergencies** During a fire emergency access to buildings needs to be controlled and limited to fire teams and the fire department on arrival.
- ♦ **Armed Robbery:** When an armed robbery or any other crimes are committed, access to the scene should be limited to ensure that the crime scene is not contaminated. The crime scene should be secured and only the police should be allowed on the crime scene.
- ♦ **Assembly Areas:** Access and egress needs to be controlled at assembly points to ensure that all persons can be accounted for during an emergency.
- ♦ **Suspicious Mail and Packages:** If a suspicious mail or package is found inside a premises / building access should be limited to the area until the police declare the area safe.
- ♦ **Explosions:** When an explosion occur at a building premises (criminal / non criminal) only emergency teams (only if there are injuries) and emergency personnel, EMS, Fire Brigade and SAPS should be allowed on the scene.
- ♦ **Chemical Spills:** Access to areas where chemical spills occurred should be limited to health and safety specialists.
- ♦ **Re-Entry of Evacuated Buildings:** Access to buildings should only be allowed once a directive is received for the client or emergency personnel.

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Define access control.			
2	Explain the purpose for access control.			
3	Explain the objectives of access control and egress control.			
4	Explain the meaning of outer layer protection.			
5	Identify and demonstrate knowledge and skills in the use of the various access control methods/aids.			
6	Identify and demonstrate knowledge and skills in the use of the various access control identification system.			
7	Explain the relation between access control measures and internal and external threats.			
8	Explain the role of access control in the event of an emergency.

LEARNING UNIT 2

Operating and maintaining access and egress sites.

LEARNING OUTCOMES

A learning credited with this unit will be able to:

1. Operate and maintain an access/egress control site in accordance with the relevant legal requirements and workplace procedures.
2. Conduct access/egress control of people vehicles and goods per workplace procedure.
3. Operate site-specific equipment in accordance with workplace procedures and manufacturer's specifications.
4. Deal with unauthorized/authorized people, vehicles and goods as per workplace procedure and relevant legal requirements.
5. Handle emergencies and irregularities according to workplace procedures and contingency plans.
6. Ensure appropriate interpersonal skills for effective customer relationships.

LEARNER ACTIVITY 1 (page 43)

As an access control security officer, it is expected of you to control all access and egress to the security area you are protecting. What are the five main aspects to be controlled during access and egress control?

To perform their duty effectively, it is of the outmost importance that the security officer understands all task and functions. The work procedures may differ from site to site, depending on the type and extent of the property to be guarded. There are five aspects to be controlled during access and egress control:

- ♦ Employees
- ♦ Visitors
- ♦ Contractors
- ♦ Vehicles
- ♦ Goods

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 43)

Work procedures for access and egress control must indicate the following:

Work procedures for access and egress control must identify the following:

- ♦ Who has access and to which area.
- ♦ Access and egress procedures.
- ♦ Identification procedures.
- ♦ Monitoring of people, vehicles and goods during a period of duty/visit.
- ♦ Site instructions and regulations to be applied during access and egress control.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 3 (page 43)

Your security manager approaches you to assist him in thinking of the current and additional measures that can be taken within your access control. There are five possible measures that can be taken. Name the five and give a short description of each.

Work procedures for access and egress control must identify the following:

- ♦ Who has access and to which area.
- ♦ Access and egress procedures.
- ♦ Identification procedures.
- ♦ Monitoring of people, vehicles and goods during a period of duty/visit.
- ♦ Site instructions and regulations to be applied during access and egress control.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 55)

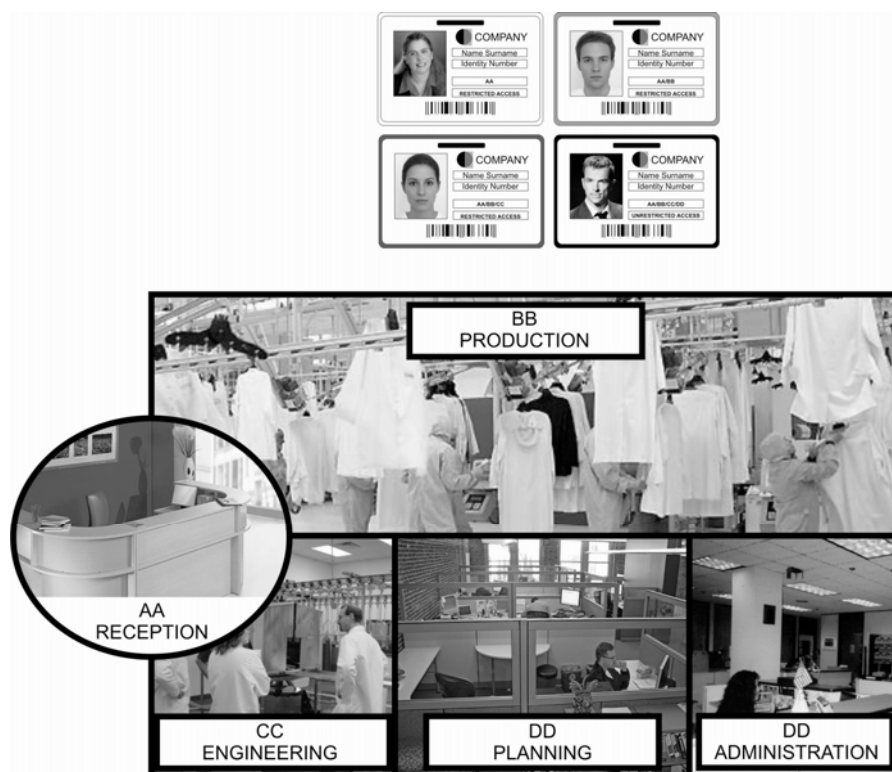

Demonstrate your understanding of zoning by draw a picture of a typical floor plan of a building.

Indicate your understanding of zoning on the floor plan.

A system of controlling movement and access of personnel and visitors is essential. This enables the security officer to monitor and control the access to and movement within the different parts of the premises. This prevents or makes it much more difficult for unauthorized persons to enter unauthorized areas. Different companies will have different ways of setting up and running a system to monitor and control employee and visitor movement, but the general principles are as follows:

Determine the various working areas within the company, e.g.

- ♦ Receiving area (AA),
- ♦ Production area (BB),
- ♦ Engineering area (CC),
- ♦ Planning area (DD),
- ♦ Administration area (EE), etc

LEARNER ACTIVITY 7 (page 57)

Entry and exit to premises are usually controlled by an access and egress control system. The functions of such a control system could include the following:

Entry and exit to premises is usually controlled by an access and egress control system.

The functions of such a control system could include the following:

- ◆ Supervision of access and/or egress of regular employees.
- ◆ Control of visitors and contractors.
- ◆ Control of delivering or dispatching of goods.
- ◆ Conducting of authorized searches.
- ◆ Supervision of access or egress of all vehicles, including the searching of such vehicles.
- ◆ Escorting persons or vehicles in high risk areas.
- ◆ Keeping record of the above.

The work procedures for access and egress control systems can vary from area to area and be more specific depending on the security risk of the premises.

Persons and vehicles can be grouped into the following (zoning):

- ◆ Permanent staff that work in a specific area.
- ◆ Contractors, repair and maintenance staff who are required to work in any area to carry out their tasks.
- ◆ Security personnel who are required to supervise specific security operations.
- ◆ Vehicles delivering goods (these can vary from a simple parcel to petrol or explosives).
- ◆ Vehicles collecting garbage or scrap.
- ◆ Company vehicles delivering or loading the core product.

The best way of identifying persons is by an identification card system (visibly displayed on the individual).

- ◆ This identification card system couples to a list of persons authorized for access provides further confirmation. The list must be current.
- ◆ Electro-magnetic card systems must be based on the card-key principle.
- ◆ Visitors and contractors must give their name and purpose of visit to the access control security officer. This information should be checked against some form of identification e.g. ID book or passport.
- ◆ The visitor must be checked with the person being visited and if approved, the visitor's particulars must be recorded in a visitor's register. A visitor's card must be given to the person and then he or she must be escorted to the office of the person visited. Once the visit is over, the visitor must be escorted back to the egress point.

LEARNER ACTIVITY 8 (page 73)

To control unauthorized and authorized people, vehicles and goods at an access control point, the following guidelines will make it difficult for unwanted persons to gain access to premises:

To control unauthorized and authorized people, vehicles and goods at an access control point, the following guidelines will make it difficult for unwanted persons to gain access to premises:

Visitors

- ◆ Have a special visitors parking and issue them with a temporary parking permit (to be returned when they leave).
- ◆ Identify particular entrances and exits for use by visitors. These entrances should be security controlled.
- ◆ Keep a visitor's register with the following visitor particulars:
 - ⇒ Name and surname,
 - ⇒ Firm or company represented,
 - ⇒ Reason for visit,
 - ⇒ Time in and out,
 - ⇒ Confirmation of appointment (the person visited),
 - ⇒ Permit (number) issued before entering and collected before departure.
- ◆ All visitors must be escorted when entering a restricted area. Make use of a security officer or make the person being visited responsible.

Vehicles

- ◆ A permit system should also be in place for authorised vehicles.
- ◆ The vehicles should be checked prior to entry and before leaving a restricted area.
- ◆ Delivery vehicles should be provided for by means of a special permit or detachable sticker and should also be checked on arrival and before departing.

Goods

Almost all companies are faced with the risk of losing products, goods, equipment, etc. Some companies also run the risk of employees or visitors entering the premises with unauthorized goods, which are not allowed for various reasons.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Requirements achieved	YES		NO

LEARNER ACTIVITY 9 (page 61)**Vehicle control is achieved by.....****Vehicle control is achieved by:**

- ♦ Booms, e.g. office premises, shopping centres, housing estates, universities, technicians, etc.
- ♦ Buffer equipment, e.g. roadblocks or areas where vehicles are prohibited such as at sporting events, accidents etc.
- ♦ Inspection pits, e.g. entrances at highly secured areas, weigh bills, airports.
- ♦ Dogs, e.g. to sniff out explosives, drugs or smuggled goods.
- ♦ Personnel with mirrors, e.g. to look underneath vehicles for explosives, unauthorized parcels, smuggled equipment, or stolen property.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 10 (page 61)**Why is observation important for the success of a security officer doing duty at an access and egress control site.**

Observation contains a distinct mental image of what is seen, with the definite realisation that the total image consists of detail and knowledge that this total image is related to reality. As an example, we observe a medicine bottle. The total image is the medicine bottle.

The knowledge that the total image consists of detail necessitates the analysis of the contents, the label, possible fingerprints, etc. whilst the knowledge that the total image is related to reality directs our thoughts to the possibility of a case of poisoning or the smuggling of drugs. In this manner nothing is lost and we practise seeing facts in their true perspective.

The ability to identify and recall a situation accurately, completely and distinctly is effective observation.

The ability to observe is based on heritage, experience and education. The danger exists in relying on heritage and experience to observe a situation. The interpretation of the incident may subjectively be influenced, as the person uses himself as a measure of evaluation.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 11(page 63)**How should a security officer perform observation.****Observation should be tackled systematically**

- ♦ Get a complete picture of the situation itself.
- ♦ Work in straight line or circles.
- ♦ Afterwards, attention must be given to independent, bigger objects in order to see what their relation to the whole may be.
- ♦ Each object must be studied independently to ascertain how it fits into the picture.
- ♦ The next step is to look at, feel, dissect and do everything possible to the object and any part thereof in order to observe the object and everything related thereto.
- ♦ Lastly, and the most important, is to write down or imprint on the mind every particle and relation of the fact.
- ♦ Observation without the ability interpret and represent facts clearly, completely and objectively would be of no value. Accurate description, therefore, means to differentiate between that which has actually been observed or seen. Conclusion are to be reported separately with regards to facts and deductions.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

LEARNER ACTIVITY 12

Study picture below and answer the relevant questions

- ♦ Observe the picture for exactly 30 seconds. Look at everything you think might be important.
- ♦ After 30 seconds, answer the questions on the next page on a sheet of paper. (Do not read the questions before you look at the picture!)

- ♦ Are there cars parked on the sides of the road?
- ♦ What color is the pickup truck driving in the road?
- ♦ Any minivans around?
- ♦ What does the blue sign say?
- ♦ What's the speed limit?
- ♦ Are there any pedestrians on the road?

- ♦ Choose several people to be observers and choose two people to be investigators.
- ♦ Allow the observers to look at the picture for 30 seconds. The investigators should not look at the picture.
- ♦ After 30 seconds, the investigators should begin questioning the observers.
- ♦ Each Investigator should question each observer. Then, the Investigators should attempt to reconstruct the scene based on the "eyewitness testimony".

Investigators can use these questions to guide their inquiry, but may also think of their own questions.

- ♦ About how many cars can you see?
- ♦ Can you describe some of the cars in the lot?

Investigators can use these questions to guide their inquiry, but may also think of their own questions.

- ♦ About how many cars can you see?
- ♦ Can you describe some of the cars in the lot?

- ♦ How many cars were in the intersection?
- ♦ Across the street, are there any parked cars on the side?
- ♦ Can you describe at least one of the cars driving through the intersection?
- ♦ Are there any other potential witnesses?

If they answer yes, ask the following question:

- ♦ What was this witness doing?
- ♦ Where was he? They should have noticed a person mowing a lawn across the street.
- ♦ What was the speed limit? 35
- ♦ Was there anyone parked in the first parking spot? No

LEARNER ACTIVITY 13

CASE STUDY: Read the case study below and record the situation on the attached documentation.

♦ OB

Obtain all the necessary information from the case study below. The documentation needs to be complete and contain all the necessary and correct information as outlined in the case study.

The sound of thunder and bright flashes in the sky may have been a wonderful spectacle last night, but what I didn't realize was that it would cause one of the worst days of my life. I did not know about the power failure at three this morning because I was fast asleep. The first time I realized that my alarm did not go off, was at ¼ past five this morning – which meant that I was going to be late for work. I rushed while getting dressed and did not have time to iron my uniform because I had to run to get the last taxi. In my haste I forgot to put my pocket book in my pocket, and I could not find my shoes, so I wore takies instead.

I actually made it to work, only 7 minutes late. My co-worker that had just finished night shift was not very impressed with me because he still had to do the handover. He was going to miss his taxi and would have to wait at least ½ hour for the next one. Because I felt guilty about coming late, I told him to go – I would read the OB to get the details of the night shift....

It looked like things were eventually settling down to a normal, boring working day. Cars stop, "morning sir", "who are you visiting sir", "that would be at block C – second building on the left", "have a nice day sir". The same thing, over and over. Sometimes I feel like a tape recorder. Cars come, cars go.

In the mean time I'm still a bit unsettled from all the rushing around this morning and tired from lack of sleep because I had to settle the kids down who were crying because they're scared of the thunder and lightning.

Then the blue BMW stops at the gate about 09:20 . He hoots. So I wasn't quite as observant as I am supposed to be – I am tired, you know. I paste my smile on my face and walk up to the driver's window.

I get as far as saying: "Good morning, Sir."

"Good? – good???; so what's good about it?"

"Where is Mr. Brown? It's ten past nine. These \$%# taxis! They caused an accident that has made me late! Open this #%^ boom!"

You are escorting Mr Sithole from the control room to Mr Bembe the Financial Director of the company on 20 July 2006 at 14:00. You arrived at 14:30 at Mr Bembe's office. On the way Mr Sithole complains about walking all the way to Mr Bembe. Use the information in the case study to make an entry in your 'pocket book'.

Pocket book entry

2007/05/15 06:00	<u>Housebreaking and Theft Report</u> : On 2007/05/15 at 06:00 during a routine patrol I discovered a housebreaking and theft at the computer lab of Building BB. No suspects or witnesses could have been identified. I secured the crime scene and no one was allowed to enter the scene.
	I reported the matter to Mr Maseko my security manager, and the SAPS investigated the crime scene. SR Reference Number 13/08/2005 and OB Reference Number 123/05/2007. Signed: J Ramoba

LEARNER ACTIVITY 14 (page 74)**How should a security officer deal with a member of the public.**

Often the security officer is the first person seen when entering a company's premise, If the visitor see's the security personnel in a sloppy, dirt and incomplete uniform, then the first impression of the company and security officer will be poor. This poor impression will be further reinforced if the security officer lacks professionalism, cannot communicate effectively and demonstrates bad manners. On the other hand, a favourable impression will be created if the security officer:

- ♦ **BE SMARTLY DRESSED:** Make sure your uniform is clean and complete.
- ♦ **ACT PROFESSIONALLY:** Know your job and responsibility.
- ♦ **COMMUNICATE EFFECTIVELY:** Greet the person, Be friendly at all times, Be helpful
- ♦ **SHOWS CONCERN:** Show your concern regarding their safety.
- ♦ **DEMONSTRATE GOOD MANNERS:** All security personnel own it to themselves to be proud of what they do. This pride can be shown in their personal appearance, in their enthusiasm for performing their alignments, and is a sense of accomplishment for a job well done. If a positive attitude prevails within the security department, it will carry over to all those who come into contact with them.

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Operate and maintain an access/egress control site in accordance with the relevant legal requirements and workplace procedures.			
2	Conduct access/egress control of people, vehicles and goods per workplace procedures.			
3	Operate site-specific equipment in accordance with workplace procedures and manufacturer's specifications.			
4	Deal with unauthorized/authorized people, vehicles and goods as per workplace procedures and relevant legal requirements.			
5	Handle emergencies and irregularities according to workplace procedures and contingency plans.			
6	Ensure appropriate interpersonal skills for effective customer relationships.

LEARNING UNIT 3

Legal compliance

LEARNING OUTCOMES

A learning credited with this unit will be able to:

1. Understand the relevant legislation, policies and regulations required for lawful searching, detention and/or seizure of people, vehicles and goods.

LEARNER ACTIVITY 1 (page 79)

What are the articles that can be seized from an arrestee after an arrest has been made according to Article 20 of the Criminal Procedures Act 51 of 1977.

Section 20 of the Criminal Procedure Act regulates which articles the state may seize. Although this section refers to articles that may be seized by the state, it is also of importance to the security official since section 23(2) empowers a security official as a private person to seize articles mentioned in section 20 under certain prescribed circumstances (section 23 is discussed later in this learning unit).

The State may, in accordance with the provisions of this Chapter, seize anything (in this Chapter referred to as an article)-

- (a) which is concerned in or is on reasonable grounds believed to be concerned in the commission or suspected commission of an offence, whether within the Republic or elsewhere;
- (b) which may afford evidence of the commission or suspected commission of an offence, whether within the Republic or elsewhere; or
- (c) which is intended to be used or is on reasonable grounds believed to be intended to be used in the commission of an offence.

LEARNER ACTIVITY 3 (page 84)**Provide detail explanation of the following:**

- ♦ The meaning of premises as defined in the act.
- ♦ Dangerous object
- ♦ Authorized officer
- ♦ “Women searching a women”
- ♦ Reasonableness

'authorized officer' means any person authorized by the owner of any public premises or any public vehicle to act in terms of the provisions of section 2;

'dangerous object' means any explosive or incendiary material, any explosive or incendiary device, any firearm, and any gas, material, weapon or other article, object or instrument which may be employed to cause bodily harm to a person, or to render a person temporarily paralysed or unconscious, or to cause damage to property, as well as anything which the Minister may by notice in the Gazette declare to be a dangerous object for the purposes of this Act;

'owner of any public premises or any public vehicle' means the head of the department of State, division, office or other body which occupies or uses those premises or that vehicle or is in charge thereof, as the case may be

'public premises' means any building, structure, hall, room, office, convenience, land, enclosure or water surface which is the property of, or is occupied or used by, or is under the control of, the State or a statutory body, and to which a member of the public has a right of access, or is usually admitted or to which he may be admitted;

'public vehicle' means any vehicle, conveyance, ship, boat, craft or aircraft which is the property or under the control of the State or a statutory body, and which is used for the transport, for profit or otherwise, of members of the public;

[illegible]

[illegible]

LEARNER ACTIVITY 4 (page 87)**Explain the manner in which a search needs to be conducted.**

In terms of section 29 of the Criminal Procedure Act a search of a person and premises must be conducted in decent and orderly manner. This section stipulates the following:

- ♦ A search of any person or premises shall be conducted with strict regard to decency and order, and a woman shall be searched by a woman only, and if no female police official is available, the search shall be made by any woman designated for the purpose by a police official.

This section requires that the normal standards of decency be complied with and that the persons searched be subject to the least disrespect to their dignity possible under the circumstances.

Remember that strip searches and probe searches should not be undertaken by security personnel.

Also remember that a female may only be searched by a female and under no circumstances may be deviated from this requirement.

Therefore it will be in order to keep a woman in custody for a reasonable period of time until another woman is available to search her (Kriegler 2002:52).

Comments in support of decision

LEARNER ACTIVITY 3 (page 94)

When the search is completed, the person should be requested to produce his or her identity document or any official document in his or her possession. The identity documents should be checked carefully and compared with the person by means of the following guidelines, Photograph, stamps and condition of the document. Explain how these should be checked.

- ♦ **Photograph:** Carefully compare the photograph with the person. Take into consideration that the photo was probably taken a while ago which would mean a difference in age and hairstyle. The person can be requested to remove their headgear if it is obstructing a positive identification.
- ♦ **Stamps:** The stamp on the document should be confirmed to be genuine. Make sure that where the stamp crosses the corner of the photo it is even. If not it could mean that the original photo has been removed and substituted with another.
- ♦ **Condition of document:** The condition of the document should be checked against the date of issue. One should become suspicious if the condition does not correspond with the age of the document.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 95)

What should be the two main characteristics of the questions asked of the person being searched?

Question should be specific and direct such as:

- ♦ What is your name?
- ♦ What is your age?
- ♦ Where do you live? Etc.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 5 (page 95)**What are the general rules when you search someone?**

- ♦ When you search someone, keep in mind the legal limitations laid down by the Criminal Procedure Act.
- ♦ Search the person systematically and thoroughly.
- ♦ Try to determine where this person could hide an article on his person or in his clothing.
- ♦ At all time be alert for a possible attack when searching the person.
- ♦ If contraband such as drugs, stolen or smuggled goods are found, be careful when seizing it that the suspect cannot say that the security officer planted the item in his luggage or in his clothing.
- ♦ Identify the person by means of legal ID or driver's license.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 6 (page 95)

When searching employees during egress control, there is a certain procedure to follow - (this can be adapted depending on the site). List all of them.

It is not feasible to search every employee when they're all on their way home. Therefore the following procedure can be adapted to suit your circumstances:

- ♦ Select a person to be searched.
- ♦ First get their permission to be searched.
- ♦ They should then be escorted to the search room.
- ♦ Always make sure that there is a witness present.
- ♦ Ask the person if they have any company property to declare - if yes, ask them to produce it.
- ♦ If the search is negative, thank them for their co-operation and allow them to leave.
- ♦ If the search is positive follow the procedure for detaining and arrest.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 7 (page 96)**What do you have to keep in mind when searching a vehicle?**

- ♦ First determine that the vehicle is allowed to enter or exit the site.
- ♦ Always keep in mind that searching a vehicle thoroughly takes time so it is usually done quite superficially.
- ♦ A vehicle has many hiding places. Being systematic and thorough will help you to find possible hidden items. As you become experienced in this task you will discover many hiding places and you will also develop a sense of where to look.
- ♦ Taking the time to search a vehicle thoroughly can only be justified when you believe there is a good reason to do so.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 8 (page 96)

Study the image below and explain procedure to follow when searching a vehicle. Base your explanation of the procedures on the scenario below (image)

- ◆ Firstly inform the people in the vehicle that they and the vehicle are liable to be searched.
- ◆ They should then be told to get out of the vehicle.
- ◆ One security officer must conduct the actual search while a second security officer stands back to supervise and observe.
- ◆ If any contraband or illegal items are found during the search, the observing security officer should record it in his or her pocket book all the details, such as the type of item, number of items, where found, and the reactions of the persons (suspects).
- ◆ If the person refuses to allow the search procedure, they will be denied access to the premises.

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3

LEARNING UNIT 5

Escorting

LEARNING OUTCOMES

A learning credited with this unit will be able to:

1. Identify the threat before undertaking an escort.
2. Name the resource requirements during escorting.
3. List the different security tasks during escorting.
4. Explain the actions for planning and preparing for escorting.
5. List the criteria when planning a route map and explain the steps when planning a route map.
6. Explain contingency plans for valuables, persons or suspects.
7. Identify all valuables/persons or suspects to be escorted.
8. Determine classification / recent behaviour of valuables / persons or suspects and identify special needs when preparing for escort assignments.
9. Perform suspect search when required according to relevant legislation.

LEARNER ACTIVITY 1 (page 107)

You have to escort a suspect from the control room to a police station and you have to do a threat assessment. You will need certain knowledge with regard to the threat before you can do the threat assessment. What would that be?

A security officer will need the following knowledge to assess, and therefore be prepared for counteracting any threat:

- ♦ A contingency plan (including an evacuation plan).
- ♦ The company standing operational procedure.
- ♦ Written site specific and post instructions.
- ♦ Command structure (especially after hours).
- ♦ Backup and support systems.
- ♦ Knowledge of the environment in which the site is located.
- ♦ Knowledge of the type of business conducted at the site.
- ♦ Knowledge of the history of crime at the premises.
- ♦ A comprehensive terrain analysis, which would be conducted by the officer to ascertain the mapping of the terrain including location of buildings, shops, gates, parking venues, loading bays, etc.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 108)

You have received an operational instruction to escort valuables from the control room of your company to the human resource department. The valuables will arrive at the control room on Tuesday, 12 July 2006 at 09:00. You have to escort the valuables from the control room to Mr Strydom. Before you can undertake the escort, you have to do a complete threat assessment. Discuss the steps that you will follow when doing a threat assessment. (Guidelines for progression of the threat assessment)

The security officer has to follow these steps during his or her threat assessment before they can start with their escort duty:

- ♦ **Step 1:** Identify the potential threats.
- ♦ **Step 2:** Assess the identified threats.
- ♦ **Step 3:** Give priority to the threat in relation to the risk.
- ♦ **Step 4:** Evaluate the valuable, person or suspect to determine if there are any specific details that should be included in the plan.
- ♦ **Step 5:** Evaluate the route and destination to be followed during escorting
- ♦ **Step 6:** Make recommendations to reduce the risks.
- ♦ **Step 7:** Apply additional security measures.
- ♦ **Step 8:** Implement new security measures.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 3 (page 108)

You have received an operation instruction and you have to escort a truck with mine debris or waste. The threat has already been identified that suspects might “hijack” the truck. Evaluate the identified threat. You are also allowed to use site-related examples.

When evaluating the identified threats, the security officer needs to analyse the following factors:

- ♦ Who, what, where, when and how will the threat be applied against the valuables, person or suspect.
- ♦ Verify personnel information of valuables, persons or suspects:
 - ⇒ Who is the person or suspect?
 - ⇒ What type of valuables?
 - ⇒ Classify the threat level.
 - ⇒ Classify the valuables, persons or suspects.
 - ⇒ History of valuables, person or suspect.
- ♦ Particulars of the threat:
 - ⇒ Who is posing a threat to the escorted items?
 - ⇒ Where is it likely to happen?
 - ⇒ What can be done to prevent it?
 - ⇒ Are the security measures adequate to deal with various contingencies?
- ♦ Own manpower:
 - ⇒ The officer must determine how many of his own department will be needed to conduct the escort.
 - ⇒ What measures have been taken to prevent an attack on the valuables person or suspect?
 - ⇒ How the threat and the risk is going to be managed?

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 109)

There are three different types of escorting. Name the different types of escorting and give examples in your answer (you are allowed to give site related examples).

Valuables or goods. In some instances the security officer will not be responsible for the valuables or goods themselves, but for the person who is carrying them.

Valuables or goods can include the following:

- ♦ Documents
- ♦ Precious stones
- ♦ Jewellery
- ♦ Trophies
- ♦ Bullion
- ♦ Cash
- ♦ Electronic equipment
- ♦ Firearms
- ♦ Artwork
- ♦ Mining debris (rubble) etc

Suspects.

A suspect may be someone who is in a restricted area and has to be escorted out of the building. Or a suspect could be a person who has been caught in a criminal act and needs to be escorted to a place of safe keeping where he will be handed over to the police.

Persons or visitors. For example, a visitor who needs to be escorted from the reception security area at the entrance of the premises to a specific location such as a board-room or some other meeting place.

It is also sometimes expected that the security officer does static guard duty at a meeting room and then escort the visitor back to his vehicle.

A visitor could be a person who is visiting one of the staff members of the company on official business and has to be escorted by a security officer to the staff member's office.

The following are typical visitors that a security officer will encounter daily:

- ♦ Someone delivering a package
- ♦ A person attending a meeting
- ♦ A person who has been summoned by another
- ♦ Contractors rendering maintenance service
- ♦ Telecommunication services
- ♦ City council officials
- ♦ Occupational health and safety inspectors

Requirements achieved	YES		NO

LEARNER ACTIVITY 5 (page 111)

Escorting can take place on foot or by vehicle. Explain when you would do an escort on foot and when you would do an escort with a vehicle.

- ♦ Food escort, which may include visitors, goods, suspects, etc.
- ♦ Vehicle escort, which may be for visitors vehicles, transport vehicles, etc.

Requirements achieved	YES		NO

LEARNER ACTIVITY 6 (page 112)

Complete the following table with regard to determining the special needs or requirements for escort. Fill in the missing information.

- ♦ **Category 1:**
- ♦ **Suspects:**
- ♦ **Category 3:**

How should the goods be handled, packed, transported and delivered?

- ♦ **Category 1:** Escorting of vehicles will need two (2) security officers and one (1) vehicle.
- ♦ **Category 2:** Escorting of suspects will need two (2) security officers.
- ♦ **Category 3:** Escorting of persons or visitors will need one (1) security officer.

Requirements achieved	YES		NO

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Identify the threat before undertaking an escort.			
2	Name the resource requirements during escorting.			
3	List the different security tasks during escorting.			
4	Explain the actions for planning and preparing for escorting.			
5	List the criteria when planning a route map and explain the steps when planning a route map.			
6	Explain contingency plans for valuables, persons or suspects.			
7	Identify all valuables/persons or suspects to be escorted.			
8	Determine classification / recent behaviour of valuables / persons or suspects and identify special needs when preparing for escort assignments.			
9	Perform suspect search when required according to relevant legislation.
