Material compiled by: Training Dynamics Africa

HOW THIS LEARNER WORKBOOK IS COMPILED

This learner workbook has been compiled and will help to identify and determine the type of an emergency and assist with the evacuation of people during the emergency.

1. Identifying the emergency situation
2. Assisting with an evacuation drill
3. Responding to emergency signals in own area of responsibility

You have to study the content and guidelines given in your learner reference guide to complete this workbook.

Remember that this completed workbook must be handed in as it will form part of your formative assessment and will play a role in awarding you the required 04 credits that are to be achieved upon completion of this module.

Write neatly and legibly and ensure that you do not simply copy the information contained in the learner reference guide into your workbook. Give your own opinion and ideas where applicable and write the answers in your own words to indicate your level of understanding and learning.

Good luck with the completion of this workbook.

LEARNING UNIT 1

The nature of emergencies

- ♦ Define an emergency
- ♦ Explain the role of the security function in emergency planning.
- ♦ Explain the goal of emergency and disaster planning.
- ♦ Explain why a need for emergency plans exist in organizations.
- ♦ Explain the steps in the emergency planning process
- ♦ Understand the role of security in preventing emergencies.
- ♦ Explain the basic risk assessment process during and before an emergency.

LEARNER ACTIVITY 1 (page 13)**Define an emergency event**

An “Emergency” is an unexpected event. This event may or may not be potentially fatal, but it needs dealing with immediately. However you are a Security officer. Your job is to expect the unexpected and deal with the situation effectively. As you will see from the list below there are many different types of emergency each of these will require a different response.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 14)**Define an crisis in the context of an emergency.**

Any event or occurrence that has taken place and has seriously impaired or halted the operations of a site.

In some cases, mass casualties and severe property damage may be sustained. The effects of the emergency are wide-ranging and complex. A timely resolution of disaster conditions requires complete cooperation and extensive coordination with external jurisdictions.

During a crisis, the supervisor will notify the site manager who will notify the emergency team members. A emergency operations center will be established on the site to evaluate the situation and decide upon a course of action.

Should the site not be accessible due to the nature of the emergency, an operation centre can be established at a nearby location.

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 3 (page 15)**Define an catastrophe in the context of an emergency.**

Disasters are events that occur when significant numbers of people are exposed to extreme events to which they are vulnerable, with resulting injury and loss of life, often combined with damage to property and livelihoods.

Disasters, commonly leading to emergency situations, occur in diverse situations in all parts of the world, in both sparsely populated rural and densely populated urban regions, as well as in situations involving natural and man-made hazards.

Disasters are often classified according to their speed of onset (sudden or slow), their cause (natural or man-made), or their scale (major or minor).

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 16)**Explain the role of the security function in emergency planning.**

It is generally excepted in organizations that the security leader is the main role player in emergency situations and incidents. Like safety professionals, security professionals should always be involved with emergency planning, and in most situations a representative from the security component is part of the planning committee. In practical terms in many companies the emergency organization is build around the existing security force (Berger 1979: 169).

Whether the security component is principally responsible for emergency situations or not, security will either be responsible for, or have specific roles in any emergency management function. The security leader, who should logically be the developer of the plan, will identify the following:

- ♦ Purpose and objectives;
- ♦ Major preventative, anticipatory, and response functions;
- ♦ Responsibilities assigned to particular positions;
- ♦ Interfaces with outside response agencies, such as police and fire departments;
- ♦ Equipment required; and
- ♦ An approach for bringing various elements of the plan together to form a synchronous whole (Fennely 2004:282)

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 5 (page 18)**Explain in your own words the goal of emergency planning.**

Any company or organisation can be confronted with an emergency incident, whether caused by a localised work related accident, or a major disaster caused by fire or other related natural disasters. No company or organization can consider itself immune and therefore it is managements responsibility to ensure that the organisation is prepared to meet any emergency that might reasonably strike.

Emergency and disaster plans are integrally designed to fulfil managements responsibility to meet the potential threats caused by accidents, fire and other threats. The purpose of disaster and emergency plans are to anticipate what can happen to the company or organization, and to be able to promptly and effectively respond to such incidents.

The goal of emergency planning is thus threefold:

- ♦ To ensure the safety of people. Not only employees, but all persons directly or indirectly connected to the organisation or company at the moment of the incident;
- ♦ The protection of property, with minimum loss or damage; and.
- ♦ The restoration of normal operations with minimum delay (Berger 1979:157).

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 6 (page 19)**Explain the risk assessment process during an emergency.****The “WWW.SAFE” Protocol!**

Using the following protocol will help get you thinking in the right kind of way. It is a tool to remind you of the things you need to consider in dealing with any situation, emergency or not.

- ♦ **Stop:** There is a saying, “...only fools, rush in...” make sure you are not a fool. Just because you are a trained security officer does not mean you now have super powers! You playing the hero to save one person, may cost other people their lives. In fact, you could easily become a danger to everyone around you.
- ♦ **Assess:** Consider all of the following:
 - ⇒ **W = What:** What has happened; what is happening; what objects are available, to you or them.
 - ⇒ **W =Where:** Where are you; what are your surroundings; is it light; is it dark, where are the entrances; where are the exits; where can you hide; where should you tell people to go.
 - ⇒ **W = Who:** Who are you dealing with; Is there more than one; Are they safe; Are they unconscious, How big are they; Will you need help?
- ♦ **Find a Solution:** You must try to create a, win – win, situation whenever possible. The best way to do this is too look and listen. Focus on giving everyone the best service you can. However, you must never make a promise you cannot personally deliver. Make sure you know your limitations – do not hesitate to ask for help. Once again the more you practice, the more solutions you will have available.
- ♦ **Exit Safely:** Remember you are responsible for everybody’s safety – good or bad. Therefore, have an exit plan in place. This plan should be simple and effective and easily explained. It should cover everything, from an upset customer, to terrorist attack. Fortunately, many places have policies and procedures, which cover, these events. However, if not it is up to you to work out your own plan to make sure you get home at the end of each day.

[illegible]Comments in support of decision

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Define an emergency			
2	Explain the role of the security function in emergency planning.			
3	Explain the goal of emergency and disaster planning.			
4	Explain why a need for emergency plans exist in organizations.			
5	Explain the steps in the emergency planning process			
6	Understand the role of security in preventing emergencies.			
7	Explain the basic risk assessment process during and before an emergency.

LEARNING UNIT 2

Types of emergencies

- ♦ Identify the broad categories of emergencies.
- ♦ Define an earth quake
- ♦ Explain the procedure to be followed during an earth quake.
- ♦ Define a flood
- ♦ Explain the procedure to be followed during a flood
- ♦ Define an explosion
- ♦ Explain the procedure to be followed during a explosion.
- ♦ Define an chemical spill
- ♦ Explain the procedure to be followed during a chemical spill.
- ♦ Define an fire
- ♦ Explain the procedure to be followed during a fire.
- ♦ Explain the procedure to be followed when receiving a bomb threat.
- ♦ Explain the procedure to be followed when a suspicious package have been found.
- ♦ Explain the procedure when dealing with a hostage taker.

LEARNER ACTIVITY 1 (page 25)**Explain the three types of emergencies.**

- ♦ **Natural disasters:** This category is normally referred to as “acts of God” and include earth quacks, floods, lightning, tornado’s and wild fires.
- ♦ **Abnormal incidents or accidents:** This category refers to incidents caused by human error and include the following; explosions, industrial accidents, chemical spills etc.
- ♦ **Intentional threats:** This category refers to incidents caused by intentional human acts, and include for example the following; riots, industrial action, terrorism, bomb and bomb threats as well as hostage situation (Du Preez 1990:359).

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 2 (page 26)**Explain the procedure to follow in the event of an earthquake.**

Here are some tips of what to do during an earthquake:

- ♦ Do NOT go outside. You could get hurt from falling glass or parts of buildings. If you are outside, stay away from buildings and power lines.
- ♦ Take cover under a desk, table, or other large and stable piece of furniture. Hold on to it. Or, stand in a doorway and brace yourself.
- ♦ Stay away from windows, heavy furniture, appliances, mirrors, pictures, and anything else that could fall and hurt you. Also stay away from fireplaces. You could lose your balance and hurt yourself on the fire.
- ♦ If you are driving when an earthquake happens, stop the car if it's safe. Stay inside your car until the earthquake stops, and don't drive near bridges or tunnels. Try not to stop by power lines, light posts, signs, or trees. These could fall and hurt you.
- ♦ Stay alert for falling objects. Most people get injured by falling objects during an earthquake, not by the shaking itself.
- ♦ Do NOT use matches, lighters, or candles. If there is a broken gas line, you could spark a fire or explosion.
- ♦ Do NOT use elevators. There might be a power outage due to the earthquake, and you could get stuck in the elevator.

After the earthquake stops, here's what you should do:

- ♦ Check yourself and others for injuries. Call the local emergency number 10111 if you or someone else needs immediate medical assistance. If the phone lines are not working, try using a cell phone.
- ♦ Check to see if electric, water, and gas lines are damaged. If they are, shut off the valves. If you smell gas, find out what to do.
- ♦ Stay away from damaged buildings and areas. You could get hurt by broken glass and falling objects.
- ♦ Listen to the radio for more information.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.Comments in support of decision

LEARNER ACTIVITY 3 (page 26)**Explain the procedure to follow in the event of an flood.**

When flooding happens, here's what you should do:

- ♦ Go to higher ground immediately.
- ♦ Do NOT try to drive through water, even if it's not moving. Your car can easily get swept away.

[illegible]Comments in support of decision

LEARNER ACTIVITY 4 (page 27)**Explain the procedure to follow in the event of an explosion.**

If the building you're in is collapsing or there's an explosion, here's what you should do:

- ♦ Leave as quickly as possible.
- ♦ Stay calm.
- ♦ Do NOT use elevators. The power might go out, and you will be stuck.
- ♦ Take your emergency kit with you if you have time.
- ♦ If you can't get out of the building, go under a stable piece of furniture, like a table or desk.

If you get trapped by debris, here are some tips to stay alive:

- ♦ Try not to move around too much. You might kick up too much dust, making it hard to breathe.
- ♦ Cover your nose and mouth with a cloth to avoid breathing harmful dust and smoke.
- ♦ To let rescuers know where you are, tap on a pipe or wall. Or you can use a whistle. Avoid shouting since this could cause you to breathe in a dangerous amount of dust.
- ♦ If you have a flashlight, use it to see and to let rescuers know where you are.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.Comments in support of decision

LEARNER ACTIVITY 5 (page 28)**Explain the procedure to follow in the event of an chemical spillage.**

The following are general guidelines to be followed for a chemical spill.

- ♦ Immediately alert area occupants and supervisor, and evacuate the area, if necessary.
- ♦ If there is a fire or medical attention is needed, contact Public Safety at your local emergency number.
- ♦ Attend to any people who may be contaminated. Contaminated clothing must be removed immediately and the skin flushed with water for no less than fifteen minutes. Clothing must be laundered before reuse.
- ♦ If a volatile, flammable material is spilled, immediately warn everyone, control sources of ignition and ventilate the area.
- ♦ Wear personal protective equipment, as appropriate to the hazards.
- ♦ Consider the need for respiratory protection. The use of a respirator or self-contained breathing apparatus requires specialized training and medical surveillance. If respiratory protection is used, be sure there is another person outside the spill area in communication, in case of an emergency. If no one is available, contact your manager.
- ♦ Protect floor drains or other means for environmental release. Spill socks and absorbents may be placed around drains, as needed.
- ♦ Complete a hazardous waste sticker, identifying the material as Spill Debris involving XYZ Chemical, and affix onto the container. Spill control materials will probably need to be disposed of as hazardous waste. Contact
- ♦ Report all spills to your supervisor

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.Comments in support of decision

LEARNER ACTIVITY 6 (page 30)

You receive a telephone bomb threat while executing your duty at a designated site. What must you do and what must you keep in mind?

Try to keep the caller on the line as long as possible. Do your best to write down or record the conversation. You should also write down things like the caller's voice and any background noise. The more information you can tell authorities, the better. See example of recording document on the next page.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.Comments in support of decision

LEARNER ACTIVITY 7 (page 32)

You receive a package from a visitor. The package is addressed to a person which is not working anymore. On investigation you realize that the person does not even exist. What must you do and what must you keep in mind?

How do you know if a letter or package is suspicious?

To determine if the letter or package is suspicious, check to see if it has one or more of the following characteristics:

- ♦ It is not addressed to anyone in particular. Or it is addressed to someone who no longer lives or works at that address.
- ♦ The label is handwritten or poorly typed. It may contain typos, misspellings and incorrect information.
- ♦ There is no return address or a strange return address.
- ♦ It says things like "To Be Opened in the Privacy of," "Confidential," "Personal," "Do not X-ray," or "Prize Enclosed."
- ♦ There is more postage on the package or letter than is necessary. Or there's no postage at all.
- ♦ It is hand-delivered by someone who's not an official mail carrier.
- ♦ It is unusually heavy for its size.
- ♦ It has a strange shape or is lopsided.
- ♦ There is an unusual amount of tape on it.
- ♦ It smells funny, is leaking, is a strange color, or has oily stains.
- ♦ There is a strange powder on the outside.
- ♦ It has writing that you don't understand on it.
- ♦ It's wrapped in string. Packages today no longer need to be wrapped in twine or string.
- ♦ You received a phone call from an unknown person asking if the package or letter was received.

You've determined that the letter or package is suspicious. Here's what you should do now:

- ♦ Put it down immediately and carefully.
- ♦ Place it on a stable surface, like a table or the floor.
- ♦ Cover it with trash can or a plastic bag.
- ♦ Phone the 10111.
- ♦ Let others in the building know about the package and tell them to leave the area. If you think you've been exposed to any dangerous materials that might be inside or on the package, try not to go too far from the area. That way, you will hopefully not spread the contamination.
- ♦ If you touched the package, wash your hands with soap and lukewarm water.
- ♦ Remember details. Make a list of all the people who were in the area or room where the letter or package was seen.

[illegible]Comments in support of decision

LEARNER ACTIVITY 8 (page 29)

A fire breaks out while you are executing your duty at a designated site. What must your actions be as a security officer?

If you discover a fire:

- ♦ Alert people in the area of the need to evacuate
- ♦ Activate the nearest fire alarm
- ♦ Call the local fire Department.

If a building fire alarm is sounding or you receive notification of a fire emergency:

- ♦ Feel the door or doorknob to the hallway with the back of your hand. If it feels hot, do not open it, the fire may be on the other side of the door. If you are trapped, put a cloth or towel under the door to help prevent the entry of smoke.
- ♦ Phone the Fire Department and provide them with your location and telephone extension and that you are trapped in the room and need rescue. Stay on the phone until instructed otherwise.
- ♦ If the door is not hot, open it slowly. If the hallway is clear of smoke, walk to the nearest fire exit and evacuate via the nearest stairwell to the street/grade level exit.
- ♦ Close doors behind you.
- ♦ Do not attempt to use elevators. Elevators are tied to the fire detection system and are not available to occupants once the alarm sounds.
- ♦ Assemble at the area designated in your departmental Emergency Action Plan and remain there until instructed by the fire department that it is safe to re-enter the building.

If you have been trained to use a fire extinguisher:

Only trained personnel may use fire extinguishers. Small fires can be extinguished without evacuation, but you must constantly evaluate and be ready to evacuate if the fire cannot be controlled. NEVER ENTER A SMOKE-FILLED ROOM.

- ♦ Alert people in the area.
- ♦ Activate the fire alarm.
- ♦ Smother the fire or use the correct fire extinguisher. Aim the extinguisher at the base of the fire.
- ♦ Maintain an accessible exit.
- ♦ Avoid smoke and fumes.
- ♦ Remain available to answer questions from fire marshal or the fire department.
- ♦ Contact facility management to replace the fire extinguisher.
- ♦ Report all fires to your supervisor.

LEARNING UNIT 3

Emergency planning

- ♦ Explain the basic structure of an emergency plan
- ♦ Understand the elements of an emergency plan and explain it against practical examples
- ♦ Know the specific responsibilities of security staff during emergencies .
- ♦ Explain the rules to follow during an evacuation.
- ♦ Complete the required administration documents/registers

LEARNER ACTIVITY 1 (page 37)**What is the minimum that needs to be included into a emergency plan.**

- ♦ Since not all disasters are the same, dealing with each of the types most likely to occur may require specialised training and equipment;
- ♦ Training should include the actual use of different kinds of equipment that might be needed in a given situation;
- ♦ Training should not be given only once or infrequently;
- ♦ Certain types of incidents may require training of all employees and not just security personnel. If a contract security company is used own employees must be trained to respond to emergencies;
- ♦ Training must cover both what should be done and what should not be done;
- ♦ All response team personnel should be trained to function in any assigned role; and
- ♦ Training must be given by qualified trainers.

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 2 (page 40)**Explain the importance of a command post during the planning of an emergency.**

Any emergency response should be controlled from a command post. Although it is essential that the command post is in a secure area away from the risk, depending on the scale of the emergency it might sometimes only be the office of the plant manager, or the security office. In larger organizations for example in a mining environment, a permanent emergency command centre will be established. Although it is sometimes necessary to have decentralized emergency command post for areas where the emergency is taking place over a large area, it is still essential that a centralized command post is established to which the others can report. It is important that in all emergency situations that everyone should know where the “nerve centre” is.

As with other aspects of emergency planning there should always be an alternative, or backup in the event the primary location becomes part of the emergency incident. Although the command centre should always be in a secure or protected area, it must be readily accessible to key role players. The command centre should be well equipped with the following resources:

- ♦ Communication facilities (telephones, two-way radio's, public address systems etc); and
- ♦ Essential emergency records,- which is often maintained

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 3 (page 41)**Explain the responsibility of then emergency controller.**

- ♦ Classifying the emergency and initiating action;
- ♦ Activating emergency teams;
- ♦ Ordering shutdown (partial or full);
- ♦ Ordering evacuation (partial or full);
- ♦ Reporting to management;
- ♦ Making emergency announcements;
- ♦ Requesting aid or other assistance; and.
- ♦ Coordinating emergency actions

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 44)

List the golden rules that needs to be considered during an evacuation.

- ♦ Stay calm;
- ♦ Do not run (walk briskly);
- ♦ Keep to the left of emergency escape routes;
- ♦ Assist disabled persons;
- ♦ Do not use lifts;
- ♦ Ladies must remove their high heeled shoes; and
- ♦ Do not flock together and walk in single file.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 5 (page 44)**Explain the function of assembly points.**

The assembly points are multi functional, and include the following:

- ♦ to provide emergency teams the opportunity to do roll call and to determine if any personnel is unaccounted for;
- ♦ To ensure stability and order to the evacuation plan;
- ♦ To avoid panic;
- ♦ To treat any injuries; and.
- ♦ To provide a central point of control over the “masses”

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 6 (page 45)**List the responsibility of security during emergencies**

- ♦ Access control
- ♦ Traffic control
- ♦ Protection of property
- ♦ Direction and control of personnel
- ♦ Direction and control of evacuation procedures.
- ♦ Assistance in first aid, rescue, fire fighting and other emergency needs.
- ♦ Protection of vital information, documents and records.
- ♦ Establish communication with outside agencies

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 7 (page 47)**What is the purpose of an occurrence book ?**

An occurrence book is used to record all security related activities that occur during your period of duty.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 8 (page 48)

Are you allowed to use red pen in the occurrence book and secondly why is the use of tippex not allowed.

- ♦ Number your entries in a chronological sequence starting with one.
- ♦ Ensure the correct date, month and year is recorded in the occurrence book.
- ♦ Make entries in the order in which they occurred and make sure the correct time is allocated to each event.
- ♦ **Use black ink to write and red ink to underline. Registers are usually inspected in red ink.**
- ♦ Write neatly and legibly.

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 9 (page 49)**Describe what a pocket book is when to use it.**

Pocket books are small A-6 books that each security officer must keep with them at all times and are checked by supervisors and management. These books are used to assist the security supervisor to maintain a high standard of control of all staff and to monitor the activities of officers. Any deficiencies in the security system through entries made by his/her staff member should also be followed up. When a pocket book is full, it is handed in and a new one will be issued to the security officer as per company procedure. The reasons for keeping the pocket book are:

- ♦ Keep records of duty hours on site.
- ♦ Keep notes, orders and instructions.
- ♦ Document items when away from the occurrence book.
- ♦ Record necessary details to use at a later stage.

Requirements achieved	YES		NO	
Comments in support of decision				

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

LEARNING UNIT 4

Evacuations

- ♦ Explain the different types of evacuations
- ♦ Explain the action that an officer may take when employees refuse to evacuate.
- ♦ Explain the evacuation drills during the event of a fire
- ♦ Discuss general evacuation procedures.
- ♦ Explain the evacuation drill during the event of an bomb threat.
- ♦ Discuss procedures during the event of a medical emergency.
- ♦ Explain a typical standard operating procedure applicable to evacuation.
- ♦ Identify and explain the meaning of emergency signs applicable to emergencies.

LEARNER ACTIVITY 1 (page 55)**Explain the types of evacuations****♦ Partial Evacuation**

This action is necessary where a suspicious object is found or when a specific place was indicated by a person making a bomb threat. It will also be ordered where a fire is localized and can be easily contained. The term partial evacuation means the following:

Only the area that is affected by the emergency is evacuated. Other areas not affected will not be evacuated. This limits the risk of injury to personnel and the damage to property.

♦ General evacuation

The decision to order a general evacuation is a difficult one to take because of the accompanying responsibility and the problems it may cause. The term general evacuation means the following:

All of the areas that is affected by the emergency as well as those that is not affected is evacuated. The whole company, personnel and visitors will have to evacuate the premises.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 57)**Explain the evacuation procedures to be followed during a fire in a building**

If a fire is discovered, there are three major considerations:

- ♦ raising the alarm,
- ♦ fighting the fire,
- ♦ and evacuating the building.

The priority of these will be determined by the circumstances, but personal safety is paramount at all times. The organizational procedure will be adhered to in all regards.

Ask yourself these questions when determining whether to fight a fire with a portable extinguisher or evacuate the building.

- ♦ **Is the fire small enough to be controlled by a portable extinguisher?** The time to use a portable extinguisher is during the early stages of a fire. Once a fire starts to spread, your best option is to evacuate the building.
- ♦ **Am I safe from toxic smoke and gasses?** Remember that all fires produce carbon monoxide. Carbon monoxide is a colorless, odorless toxic gas. Many fires will produce other toxic gasses in addition to carbon monoxide. If the fire is producing large amounts of smoke, or you suspect the fire involves a hazardous material, your best option is to evacuate the building.
- ♦ **Do I have an escape route?** Before attempting to extinguish a fire, always ensure you have a reliable escape route. If you are in a room or confined area, position yourself between the fire and the exit door. In other words, when you are facing the fire the exit door should be at your back, ensuring you are not trapped if the fire is not quickly extinguished.
- ♦ **Do I have the right extinguisher?** Make sure the extinguisher's label indicates it is rated for use in fighting the type of fuel that is burning, and check if the extinguisher is fully charged. If the extinguisher is not fully charged, or is not the proper type, your best option is to evacuate the building. You can find information about extinguisher ratings in the learning program Basic Fire Fighting.
- ♦ **What do my instincts tell me?** If you do not feel comfortable trying to extinguish the fire, do not attempt to. Evacuate the building and let the fire department do their job. Remember: firefighters have equipment, training, and experience that you do not possess.

[illegible]Comments in support of decision

LEARNER ACTIVITY 3 (page 60)**Explain the evacuation procedures to be followed during the event of a bomb threat.**

Until proven otherwise, all threats are to be treated as real. During working hours the emergency team together with management staff should evaluate the threat and consider actions/evacuation. This may be done in conjunction with the police and facilities management staff if they are available. See study unit 2 for example of a bomb threat checklist.

The threat may be specific or non-specific as follows:

Specific Threat: In this case the caller will provide a more detailed warning statement, which might describe the type and placement of device, the reason or motive and /or other additional specific information.

Non specific threat: In this instance they may make a simple statement to the effect that a device has been placed. Generally very little, if any, additional detail is conveyed before the caller terminates the conversation. The non-specific threat is more common, but neither type of threat can be immediately discredited without investigation. Every threat has to be treated as real until proven otherwise. Depending on the evaluation by management, one of four possible alternatives should be pursued. If an evacuation is ordered, do not use fire alarm – use PA facility and a search along paths of travel and around assembly areas must be conducted before ordering evacuation.

Evacuation action

- ♦ **Option One:** Do nothing. It may be tempting to do nothing when a child or drunkard has made a threat but if the slightest doubt another option must be considered.
- ♦ **Option Two:** Search with partial evacuation. If the threat level is considered moderate, with no reason to believe explosion is imminent, the person who has a knowledge might consider partial evacuation retaining only essential staff and search teams. Partial evacuation might also be appropriate where an organisation is spread over a wide area: Only those personnel at immediate risk may need to be evacuated initially.
- ♦ **Option three:** Search and evacuation. In this option personnel remain in-situ during initial search and are evacuated once the presence of a suspicious article is confirmed. Normally this option would be adopted in a low threat assessment scenario because otherwise the implication is that persons would be exposed to the effects of a device if it functioned. Doors and windows should be left open and staff and students should be required to remove all personal belongings, e.g. handbags, brief cases, etc..when evacuating. This will facilitate the identification of suspect objects.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.Comments in support of decision

LEARNER ACTIVITY 4 (page 62)**List some of the reactions a victim can experience during an emergency.**

People can suffer greatly in the aftermath of crime and may experience a range of reactions, depending on the severity of the crime. These may include:

- ♦ headaches,
- ♦ insomnia,
- ♦ anxiety,
- ♦ relationship problems
- ♦ and a temporary inability to cope with every day living.

Requirements achieved	YES		NO

LEARNER ACTIVITY 5 (page 64)**Complete the emergency signs.****(1)Disabled fire exit arrow right****(2)Disabled fire exit arrow down right****(3)Fire exit arrow down****(4)Fire exit arrow up****(5)Fire exit arrow down left sign****(6)Fire exit arrow up right sign****(7)Fire exit arrow up sign****(8)Fire exit straight arrow sign****(9)Fire exit diagonal arrow sign****(10)Fire exit Running man only right sign**

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Explain the different types of evacuations			
2	Explain the action that an officer may take when employees refuse to evacuate.			
3	Explain the evacuation drills during the event of a fire			
4	Discuss general evacuation procedures.			
5	Explain the evacuation drill during the event of an bomb threat.			
6	Discuss procedures during the event of a medical emergency.			
7	Explain a typical standard operating procedure applicable to evacuation.			
8	Identify and explain the meaning of emergency signs applicable to emergencies.
