Material compiled by: Training Dynamics Africa

HOW THIS LEARNER WORKBOOK IS COMPILED

This learner workbook has been compiled for learners who use a computer in a business environment. It is an introduction to basic computer literacy.

1. Explain basic IT concepts
2. Identifying and operating the hardware in a specific workstation
3. Using a computer operating system
4. Demonstrating basic maintenance procedures

You have to study the content and guidelines given in your learner reference guide to complete this workbook.

Remember that this completed workbook must be handed in as it will form part of your formative assessment and will play a role in awarding you the required credits that are to be achieved upon completion of this module.

Write neatly and legibly and ensure that you do not simply copy the information contained in the learner reference guide into your workbook. Give your own opinion and ideas where applicable and write the answers in your own words to indicate your level of understanding and learning.

Good luck with the completion of this workbook.

LEARNING UNIT 1

Basic understanding of Windows

- ♦ Demonstrate knowledge by explaining the basic meaning of a computer.
- ♦ Define the meaning of hardware.
- ♦ Demonstrate knowledge by identifying the following hardware components:
 - ⇒ Input devices
 - ⇒ Output devices
- ♦ Define the meaning of software.
- ♦ Demonstrate knowledge by explaining how software is operating within the operation system.
- ♦ Define application software.
- ♦ Demonstrate knowledge by explaining the different components of a Windows system.

LEARNER ACTIVITY 1**Multiple choice questions.**

The learner must indicate, by means of a cross, the most correct answer. Draw the cross through the correct answer in the space provided on the left of the most correct statement

1. The most common Operating System (OS) for small computers is.....
[A] Microsoft Windows
[B] MacIntosh
[C] Microsoft Word
2. The two parts of a computer are.....
[A] Zip Drive and CD
[B] Monitor and Keyboard
[C] Hardware and Software
3. The Central Processor Unit (CPU) is a.....
[A] Place where your files live.
[B] Main chip on the computer that makes everything go.
[C] Space where your computer does its processing.
04. What is it called when you remove some information from a file or remove a file from the disk?
[A] Save
[B] Edit
[C] Delete
05. What kind of a file is the kind that we care about most (memos, letters, pictures, etc.)?
[A] Application File
[B] Document Files
[C] System Files
06. Using the desktop metaphore, what is the hard drive (and other kinds of storage media like floppy disks)?
[A] File Cabinet
[B] Application Files
[C] Desktop

07. What do you do to get rid of a window that you've opened?

- [A] Delete
- [B] Trash
- [C] **Close**

08. What do you do when you make changes to a document?

- [A] Drag
- [B] Click
- [C] **Edit**

09. What menu command do you use to give a file a name and a place to live?

- [A] Save
- [B] **Save As**
- [C] Creating A File

10. Where do you move icons when you want to get rid of or delete them?

- [A] **Recycle Bin or Trash**
- [B] Document Files
- [C] Folders

11. What part of your computer do you use most to edit word processing documents?

- [A] Modifier Keys
- [B] **Keyboard**
- [C] Mouse

12. What do we call those small, pictorial representations of objects we see on the desktop?

- [A] **Icons**
- [B] List View
- [C] File menu

13. What can we create, rename and move around that allows us to sort out and organize our files?

- [A] Resize Box
- [B] System Files
- [C] **Directories or Folders**

14. What do we call it when you "loose" all the work you've done since the last time you saved?

- [A] **Crash**
- [B] Close
- [C] Recycle Bin

-
15. What do we call pressing the mouse button twice in rapid succession?
- [A] **Double Click**
[B] Right Click
[C] Click
16. What part of a window that allows you to move through documents?
- [A] Mouse
[B] Keyboard
[C] **Scroll Bar**
17. What menu command allows you to go back to a document you've already worked on?
- [A] Save
[B] **Open**
[C] Save As
18. What is a synonym for "Opening" a program application?
- [A] Delete
[B] Drag
[C] **Launch**
19. What is the name of the most widely used operating system for personal computers?
- [A] Macintosh
[B] UNIX
[C] **Windows**
20. Which way should the "tail" of the mouse point when you use it?
- [A] To the right
[B] **Away from your body**
[C] Toward the ground
21. What do we call moving an object on screen with the mouse?
- [A] Double Click
[B] Click
[C] **Press and Drag**

Requirements achieved	YES		NO	
Comments in support of decision				

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1.	Demonstrate knowledge by explaining the basic meaning of a computer.			
2.	Define the meaning of hardware.			
3.	Demonstrate knowledge by identifying the following hardware components: ⇒ Input devices ⇒ Output devices			
4.	Define the meaning of software.			
5.	Demonstrate knowledge by explaining how software is operating within the operation system.			
6.	Define application software.			
7.	Demonstrate knowledge by explaining the different components of a Windows system.

LEARNING UNIT 2

Basic skills

- ♦ Explain what a mouse is.
- ♦ Demonstrating the correct method of holding a mouse.
- ♦ Demonstrate the following mouse techniques:
 - ⇒ Left click
 - ⇒ Right click
 - ⇒ Click and drag
 - ⇒ Double click
- ♦ Explain the correct use of a keyboard.
- ♦ Demonstrate the correct method of using a keyboard by performing basic typing tasks.

LEARNER ACTIVITY 1

Identify a mouse by demonstrating the correct way of holding a mouse.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 26)

Demonstrate the following actions by using a mouse:

Double click
Left click
Right click.

You must also explain the use of each of the above.

The assessor will provide you with specific tasks to complete this activity.

- ♦ **Clicking:** Pressing down gently on the mouse button while holding the mouse perfectly still. The perfectly still part is important, but is not a problem if you press the button gently. New users sometime jerk the mouse as they click because they are trying to click too hard. Instructions which simply say "click," usually mean click with the left mouse button.
- ♦ **Left-Clicking :** Clicking with the index finger. Even if you are left-handed, if you have followed the instructions above and reversed the left and right buttons, you are using the index finger. So, left-click means index finger-click.
- ♦ **Right-Clicking:** Clicking with the middle finger. Even if you are left-handed, if you have followed the instructions above and reversed the left and right buttons, you are using the middle finger. So, right-click means middle finger-click.
- ♦ **Click and Drag:** Gently depress the mouse button and leave it depressed while you move the mouse. If you do this when the tip of your mouse pointer is over an object (title bar, icon, folder, etc.) your mouse pointer drags the object to a new location. When you let go of the mouse button, the object is dropped into a new location.

This is almost always done while holding down the left mouse button (index finger button), but there are some times when you may be instruct to click and drag using the right mouse button (middle finger button).

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 3

Identify a keyboard by demonstrating the correct way using it.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Explain what a mouse is.			
2	Demonstrating the correct method of holding a mouse.			
3	Demonstrate the following mouse techniques: ⇒ Left click ⇒ Right click ⇒ Click and drag ⇒ Double click			
4	Explain the correct use of a keyboard.			
5	Demonstrate the correct method of using a keyboard by performing basic typing tasks.

LEARNING UNIT 3

Basic IT concepts

- ♦ Define a virus.
- ♦ Explain the consequences of viruses by providing at least three examples.
- ♦ Explain the importance of a company IT policy.
- ♦ Explain the consequences of an individual when not complying with a company IT policy.
- ♦ Define a desktop computer
- ♦ Define a network system
- ♦ Explain the difference between a standalone PC and a network.
- ♦ Explain the importance of security access of using a computer in your organization.
- ♦ Explain the concept of making backups.
- ♦ Explain the importance of making backups.
- ♦

LEARNER ACTIVITY 1 (page 39)

Explain the consequences of not backing up your information.

Backups are data insurance. Real-world insurance policies protect your home, car, and health from financial disaster. Likewise, data backups protect the work you do on your computer. In a way, having an exact copy of the files on your computer stored elsewhere is even better than insurance. Insurance only kicks in after a tragedy. If your hard drive breaks down, falls victim to a virus, or deletes some important files in response to your careless commands, it's no tragedy when you have a backup. And if the backup is recent and serves as an exact copy for all the data on your computer, the recovery process shouldn't present any problems or delays at all.

Not having a backup is a frightening prospect. If the worst happens, how much data will you lose? How much time will it take for you to re-create data that has not been backed up? With a proper backup routine, you can recover your data from the clutches of a full system failure. Plus, you can recover your OS (operating system), applications, documents, e-mail, and other settings.

It is important to back-up for the following reasons:

Mechanical or electronic failure could mean that you lose important data. Re-inputting the data is costly to the establishment, both in time taken to do it and in delays in providing services and / or products. Furthermore the loss of information could also inconvenience clients in:

- ♦ delays in billing, incorrect billing, etc, which could result in loss of revenue.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2

Explain what you understand of a network system and a stand alone PC. Indicate your understanding by drawing a basic picture to outlined the differences.

Desktop computer**DEFINITION**

A desktop computer is a personal computer (PC) in a form intended for regular use at a single location, as opposed to a mobile laptop.

Prior to the wide spread of microprocessors a computer that could fit on a desk was considered remarkably small. Today the phrase usually indicates a particular style of computer case.

Desktop computers come in a variety of styles ranging from large vertical tower cases to small form factor models that can be tucked behind an LCD monitor. In this sense, the term 'desktop' refers specifically to a horizontally-oriented case, usually intended to have the display screen placed on top to save space on the desk top. Most modern desktop computers have separate screens and keyboards.

TAKE NOTE

The primary difference between a stand alone PC and a network is:

Standalone system is not connected to any other PC.

When two and more computers are connected with each other through a network cable or through a wireless system it becomes a network.

Computer network**DEFINITION**

A computer network is a system in which computers are connected to share information and resources. The connection can be done as peer-to-peer or client/server.

A computer network can be two computers connected:

A computer network can also consist of, and is usually made for, more than two computers:

Requirements achieved	YES		NO	
Comments in support of decision				

LEARNER ACTIVITY 3 (page 37)

Discuss the primary focus of a computer network.

The primary purpose of a computer network is to share resources:

- ♦ You can play a CD music from one computer while sitting on another computer.
- ♦ You may have a computer with a CD writer or a backup system but the other computer. doesn't have it; In this case, you can burn CDs or make backups on a computer that has one of these but using data from a computer that doesn't have a CD writer or a backup system.
- ♦ You may have a computer that doesn't have a DVD player. In this case, you can place a movie DVD on the computer that has a DVD player, and then view the movie on a computer that lacks a DVD player.
- ♦ You can connect a printer (or a scanner, or a fax machine) to one computer and let other computers of the network print (or scan, or fax) to that printer (or scanner, or fax machine)
- ♦ You can place a CD with pictures on one computer and let other computers access those pictures.
- ♦ You can create files and store them in one computer, then access those files from the other computer(s) connected to it.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 4 (page 33)

Explain the term “virus” Motivate your answer by providing examples of at least three types of viruses that can occur on your computer.

A virus is a small piece of software that piggybacks on real programs. For example, a virus might attach itself to a program such as a spreadsheet program. Each time the spreadsheet program runs, the virus runs, too, and it has the chance to reproduce (by attaching to other programs) or wreak havoc.

- ♦ **E-mail viruses:** An e-mail virus travels as an attachment to e-mail messages, and usually replicates itself by automatically mailing itself to dozens of people in the victim's e-mail address book. Some e-mail viruses don't even require a double-click -- they launch when you view the infected message in the preview pane of your e-mail software [source: Johnson].
- ♦ **Trojan horses:** A Trojan horse is simply a computer program. The program claims to do one thing (it may claim to be a game) but instead does damage when you run it (it may erase your hard disk). Trojan horses have no way to replicate automatically.
- ♦ **Worms:** A worm is a small piece of software that uses computer networks and security holes to replicate itself. A copy of the worm scans the network for another machine that has a specific security hole. It copies itself to the new machine using the security hole, and then starts replicating from there, as well.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 5 (page 34)

Discuss the benefit for an company to have a good IT “POLICY”

Computer technology is also one of the most expensive investments an organisation has to make, and it is therefore important to protect the investment by ensuring correct operation of the equipment by staff.

But an IT Policy should also aim to have the protection of staff as one of its fundamental objectives. By clearly defining what staff can and can't do with company equipment, and ensuring that the use of computers is in line with an organization's overall ethos, staff can feel secure and comfortable in the knowledge they are operating within safe guidelines.

In addition an IT Policy should commit an organisation to take a responsible health and safety approach to the use of computer equipment, so that staff can carry out their jobs in a safe environment.

Requirements achieved	YES		NO	
Comments in support of decision				

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1	Define a virus.			
2	Explain the consequences of viruses by providing at least three examples.			
3	Explain the importance of a company IT policy.			
4	Explain the consequences of a n individual when not complying with a company IT policy.			
5	Define a desktop computer			
6	Define a network system			
7	Explain the difference between a standalone PC and a network.			
8	Explain the importance of security access of using a computer in your organization.			
9	Explain the concept of making backups.			
10	Explain the importance of making backups.

LEARNING UNIT 4

The hardware on your PC

- ♦ Identify the components on a PC.
- ♦ Use the correct cables to connect the components onto the PC.
- ♦ Demonstrate the skills to turn your PC on.
- ♦ Demonstrate skills by turning your PC off in the correct way.
- ♦ Demonstrate the correct method to log on onto your PC by using a mouse.
- ♦

LEARNER ACTIVITY 1

Identify the various peripheral components of a computer and their purpose.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 45)

Label the diagram provided.

LEARNING UNIT 5

Use the computer

- ◆ Demonstrate basic skills by providing a demonstration based on a specific task on the following:
 - ⇒ Highlight texts
 - ⇒ Copy/Cut and Paste Text
 - ⇒ Save and/or Save As
 - ⇒ Print Command
 - ⇒ Create New Folder
 - ⇒ Copy/Move Files
 - ⇒ Drag and Drop
 - ⇒ Create a shortcut
 - ⇒ Rename/Delete a Folder or File
- ◆ Explain what a file extension is.
- ◆ Explain the concepts of:
 - ⇒ A Hard drive
 - ⇒ A floppy drive
- ◆ Explain the use of the recycle bin
- ◆ Identify basic software programs and explain their basic use
- ◆ Demonstrate the use of the help function on a PC.

LEARNER ACTIVITY 1

As part of this module you will be required to complete the following tasks.

An assessor/supervisor/experienced colleague must be present to observe you as you complete the tasks **OR** you can provide a portfolio of evidence proving your competence.

Did the learner:	Yes	No	Comments
Task No. 1			
Switch the PC on.			
Task No. 2			
Log on and off using the computer.			
Task No. 3			
Search for documents			
Task No. 4			
Open existing documents			
Task No. 5			
Create new folders			
Task No. 6			
Save documents			
Task No. 7			
Delete documents			
Task No. 8			
Performing a back-up procedure for documents and or folders.			
Task No. 9			
Type out and print a letter			
Task No. 10			
Print documents			

Requirements met

LEARNING UNIT 6

Basic maintenance on a PC

- ♦ Identify the top ten computer maintenance solutions
- ♦ Perform a basic trouble shooting exercise.
- ♦ Demonstrate decision-making skills by referring a problem to the correct person within your company.
- ♦ Identify the correct method to remove viruses on the PC.
- ♦ Distinguish between abusing a PC and misusing a PC.

LEARNER ACTIVITY 1 (page 90)

Discuss the ways in which a computer may become damaged.

Abuse: This refers to physical abuse and neglect of computer equipment. Examples of this are banging the keyboard, kicking the CPU, hitting the screen, etc.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 2 (page 90)

Define misuse of company computer and provide examples.

Misuse: This refers to the computer being used for anything other than business and used to do personal things, for example typing of private documents, playing games, e-mailing friends, etc.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

LEARNER ACTIVITY 3 (page 91)

Identify and list possible problems that may occur on the computer and the appropriate action to be taken.

Solution	
Hardware Failure	Contact the service agent for your particular equipment. Make sure you obtain this information and keep it handy.
Software freeze	Restart the computer. You may lose some work, but there is no other way to solve the problem. Make sure that you have set up the auto-recovery options on the programs you are working on.
Back-up Failure	Contact the company IT support officer for your office/ / region.
Alternative Ideas	There may be circumstances where the computer is not working due to a power supply disruption or the computer is malfunctioning. You will then need to make alternative arrangements or have a manual system in place for certain tasks such as, sending letters, registers etc.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

SELF-ASSESSMENT

The learner must make use of the following self-evaluation checklist to rate himself against the learning outcomes of this particular training module in establishing the level of mastery of the information.

1. Not able to comply
2. Reasonable compliance (Not acceptable for final evaluation)
3. Able to comply fully

LEARNING OUTCOMES		1	2	3
1.	Identify the top ten computer maintenance solutions			
2.	Perform a basic trouble shooting exercise.			
3.	Demonstrate decision-making skills by referring a problem to the correct person within your company.
