UNIT STANDARD 244177: Conduct security patrols in an area of responsibility		91

1. Introduction

This learning program is part of a complete qualification. For more details concerning the complete qualification please contact your service provider or alternatively the office of the SASSETA

2. Purpose of this learning program

The person credited with this unit standard is able to conduct various types of security patrols, use security equipment and resources and identify role-players involved in a security patrol. This unit standard will enable learners to apply techniques to conclude a patrol and to identify and deal with potential and/or existing threats. They will be able to conclude the security patrol by handing over the required information, property and equipment.

A person credited with this unit standard will be able to:

- ♦ Prepare for a security patrol.
- ♦ Conduct security patrol.
- ♦ Conclude a security patrol.
- ♦ Demonstrate knowledge of handgun use under adverse conditions.

2.1 Target group

This program is compiled for the following **target group**:

- Security members
- South African Defense Force members
- South African Police Force members
- Correctional Services
- Individuals who wishes to complete the NQF level 3 National Certificate in security practices.

3. Standards and qualifications

It is important that you as the learner understand and realize that this training program is not presented in isolation, but that it was developed based upon nationally recognized standards known as unit standards.

REMEMBER.....

Unit standards are the “building blocks” of qualifications. All qualifications are plotted on the National Qualifications Framework (NQF).

Unit standards comprises of outcomes. An outcome is a statement that describes the required competency that must be demonstrated by the learner on successful completion of a training intervention.

4. Assessments

In order to assess whether a learner can actually demonstrate the desired outcomes, assessment criteria are included in the unit standard. Each outcome has its own set of assessment criteria.

REMEMBER.....

The assessment criteria describe the evidence that is needed that will show that the learner has demonstrated the outcome correctly.

Kindly refer to the unit standard attached hereto for the assessment criteria.

It is of utmost importance that the learner fully understands the assessment criteria as listed in the unit standard, as it is the only way in which the learner will know what he will be assessed against.

The **final or summative assessment** is the most important aspect of this training program. It is during this process that the learner will be declared competent or not yet competent.

The learner will know exactly how he will be assessed, and when and where he will be assessed. All of these details must be obtained from the training provider where the learner enrolled for his program.

5. Range statements

REMEMBER.....

Also included in the unit standard are the range statements in support of the assessment criteria.

The range statements indicate detailed requirements of the assessment criteria.

6. The learning guide

The learner guide is included in this material under various learning units. The learner guide has been designed in such a manner that the learner is guided in a logical way through the learning material and requirements of the unit standard.

On completion of this skill program, the learner will be assessed against the assessment criteria as stipulated in the unit standard.

Each of the modules consists of learner outcomes to be achieved during training and development interventions, work related experience or at your own time. The learner outcomes will enable you to achieve the required level of confidence and competence in order to undergo the summative (final evaluations) assessment.

The learner needs to assess his own knowledge and skill throughout the training process by completing the learner workbook. With the completion of the workbook you start collecting evidence to proof your competence. The learner workbook will be assessed (FORMATIVE ASSESSMENT)

TAKE NOTE

The learner guide will remain the property of the learner once the **LEARNING PROGRAM** has been completed.

TAKE NOTE

- The best results will be obtained if you start with Study Unit 1 in the Learner Guide, and work your way through it, study unit by study unit.
- All learning outcomes are vital and must be studied (and exercised for all practical requirements) thoroughly to ensure that enough evidence for all specific outcomes is generated.

7. Learning assumed to be in place

It is assumed that a learner which registers for this program have completed a program in communication at NQF Level 3 or equivalent.

It is imperative to understand that this program are only one of the building blocks to complete Skills program 1 The complete list of unit standards for Skills program appears on the next page.

8. Security program matrix

SKILLS PROGRAM 1: SASSETA E			
244177	Conduct a security patrol in area of responsibility	Level 3	7 Credits
244184	Apply legal aspects in a security environment	Level 3	8 Credits
244176	Use security equipment	Level 2	2 Credits
244179	Handle complaints and problems	Level 3	6 Credits
244181	Perform hand over and take over responsibilities	Level 3	2 Credits
244182	Give evidence in court	Level 3	4 Credits
12484	Perform basic fire fighting	Level 2	4 Credits
116534	Carry out basic first aid treatment in the work-place	Level 3	2 Credits

Patrol Security officer/Grade E

SKILLS PROGRAM 2: SASSETA D			
244189	Conduct access and egress control	Level 4	7 Credits
242825	Conduct evacuations and emergency drills	Level 4	4 Credits
11505	Identify, handle and defuse security related conflict	Level 4	12 Credits
117705	Demonstrate knowledge of the Firearms Control Act 2000 (Act No. 60 of 2000)	Level 3	3 Credits
113924	Apply basic business ethics in a work environment	Level 2	2 Credits
119465	Write/present/sign texts for a range of communicative contexts	Level 3	5 Credits
114979	Operate a computer workstation in a business environment	Level 3	2 Credits

Access control officer/Grade D

SKILLS PROGRAM 3: SASSETA C			
113909	Coach a team member in order to enhance individual performance in work environment	Level 3	5 Credits
13912	Apply knowledge of self and team in order to develop a plan to enhance team performance	Level 3	5 Credits
244578	Describe how to manage reactions arising from a traumatic event	Level 3	2 Credits
113852	Apply occupational health, safety and environmental principles	Level 3	10 Credits
13936	Outline the legal environment of a selected industry	Level 3	2 Credits
119472	Accommodate audience and context needs in oral/signed communication	Level 3	5 Credits
11508	Write security reports and take statements	Level 4	10 Credits

Asset & reaction officer/Grade C

9. Preparation of summative assessment

After you have worked through the **LEARNER GUIDE** and you are satisfied that all theoretical and practical requirements/ evidence, as stipulated by the UNIT STANDARD, can be met, you need to make your own necessary arrangements with the assessor and/or facilitator. The training establishment will then arrange a suitable date for you to attend your pre-assessment meeting and then arrange for a suitable date to complete the final assessment.

9.1 RPL assessment

The assessment of RPL learners will be conducted in the same way as for those of new learners. The assessment pack is exactly the same and will therefore be used for new learners as well as RPL Learners. It must however be noted that learners who are applying for RPL must provide proof of previous learning and subject related experience prior to the assessment.

This proof or evidence can be in the format of certified copies (certificates) of previous learning programs that have been attended.

All the evidence will be assessed and authenticated before a learner will be allowed to enroll for an RPL program.

10. Roles and responsibilities

10.1 Facilitator/instructor

- Prepare to facilitate.
- Transfer of knowledge and skills

10.2 The role of the assessor

- Plan for the assessment
- Prepare the learner for the assessment

10.3 The role of the Learner

- Prepare for assessment.
- Accept the responsibility of learning.
- Accept the responsibility to produce/deliver evidence.

STUDY UNIT 1

Patrol types

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Explain and understand the purpose for conducting a patrol.
- ♦ Demonstrate knowledge by explaining the concepts of:
 - ⇒ Denial
 - ⇒ Detection
 - ⇒ Deterrence
- ♦ Demonstrate knowledge by explaining the patrolling function a deterrent method
- ♦ Demonstrate knowledge by explaining the patrolling function a prevention method.
- ♦ Demonstrate knowledge and skills by explaining and performing an aggressive patrol.
- ♦ Demonstrate knowledge and skills by explaining and performing an Conspicuous and inconspicuous patrol.
- ♦ Demonstrate knowledge and skills by explaining and performing the following patrol types.
 - ⇒ External Patrols /foot patrols
 - ⇒ Vehicle patrols/motorcycles
 - ⇒ Bicycles
 - ⇒ Internal Patrol

1. Introduction

According to Mackenzie, Mc Loughlin, Twiss (1983:149) patrolling both by day and night is an important but sadly neglected aspect of the security function.

The main object of patrolling is to establish and maintain a pervading ambience of crisp, protective vigilance and by giving a firm impression of numbers and strength, the accent is on prevention.

It must be determined, but without officiousness: in certain circumstances it may be discreet, but then it must never fade into oblivion. Watchful patrols are maintained:

- To prevent and detect criminal offences on the premises or against the company's interest;
- To prevent and detect fire;
- To prevent accidents by responding appropriately to unsafe acts and conditions, and to violations of safety rules; and
- To ensure that those on the premises observe company rules, and security and fire regulations. Patrols will also deter possible criminal activity on the business premises, as patrols act as a crime deterrent.

Each one of these aspects requires definite knowledge, skills and attitudes and discipline on the part of the patrol security officer.

A patrol security officer **must show alertness, interest and thoroughness**. Security patrol officers must cultivate a suspicious mind and must investigate things that appear other than normal.

2. Purpose of conducting a patrol

Before an intruder can commit a crime within a property, he must gain access to the property (except in the case of mail or package bombs or an employee who is an accomplice).

Security experts generally lump precautions designed to prevent unauthorised entry into or moment within an area under the title of "physical security". Security specialists usually think of physical security in terms of the three "D" principle:

- Denial
- Detection
- Deterrence

The "Must know, must have and must do" principle will be applicable here

2.1 Denial

DEFINITION

Denial involves those factors which presents an unauthorised person from entering a property.

This is the first line of defence and includes all the measures and aids which prevents an unauthorised person from entering the premises. This includes the following:

- ♦ Gates
- ♦ Guards
- ♦ Perimeter fences, etc.

If a person is denied access to a specific area he must think of another way to achieve his or her aim. However , if he is successful and does get into the area , the second “D” , detection comes into play.

2.2 Detection

DEFINITION

Detection may be achieved in a number of ways. The two most common types are the use of guards and alarms.

If detection is to be effective, it must be immediate. An must be discovered, apprehended and removed before he has the opportunity to commit a crime.

2.3 Deterrence

DEFINITION

The more barriers for the intruder to encounter the lesser his chances become in achieving his aim. Quite often this psychological deterrent is enough to turn him away.

This is the final back-up and the security officer must have proper knowledge of the following:

- ♦ In depth knowledge of aids available.
- ♦ How to use aids effectively
- ♦ Immediate action drills

3. Patrol as a Deterrent to Crime¹

DEFINITION

"Crime defined: To adequately discuss the subject of patrol as a deterrent to crime, we must define a crime. There are many definitions, but the ones which seem most adequate state that "Crime" is:

- ♦ Anything which society says is a crime, with the behavior (either an act of commission or of omission) being publicly announced by the duly governmental authorities.
- ♦ For which society has the power to punish, realizing that the ability of the society (through its duly constituted representatives) to punish is limited to those areas for which the government has been given some responsibility and therefore some authority. The power to punish must rest on legal authority.
- ♦ And for which society does in fact punish: deals with the extent to which laws are enforced. A decision not to enforce a law reduces the "intended" sanction of a crime.

TAKE NOTE

Security, through patrol, public education and the like, attempt to eliminate or reduce the opportunity to commit a crime or to create the belief that the opportunity does not exist.

4. Prevention through patrol

- ♦ Patrol is the most common form of law enforcement activity designed to reduce opportunity for crime or to create the belief that no opportunity exists. Security companies randomly providing intensive patrol service represent the community's most apparent and continuous effort to hold crime in check.
- ♦ Offenses against which conspicuous patrol is most effective are those which are committed on or immediately.

EXAMPLE:

- ♦ Theft
- ♦ Negligence by employees
- ♦ Burglary
- ♦ Public violence
- ♦ Arson

are examples of offenses which lend themselves to control through alert, aggressive patrol operations.

- ♦ Patrol, a term used to describe a wide range of security activities, has broader crime prevention potential than simply the effect achieved by the physical presence of an security officer at a gate. Patrol includes contacts which occur between the officer and the persons on his shift. In this sense, prevention achieved through patrol becomes even more important since it is “you” who serves as the “expert” on crime for the clients. The patrol officer is looked upon as the source of timely warnings regarding special crime problems.
- ♦ Time spent on patrol, to have real value in prevention, must include periodic inspections of businesses to ensure:
 - ⇒ That locks are adequate,
 - ⇒ That all openings to the building are thoroughly secure,
 - ⇒ That night lights are kept burning

5. Aggressive patrol

- ♦ Security action cannot deal effectively with the DESIRE of the offender, but it can deal with the suspects belief that the opportunity for criminal activity is present.
 - ⇒ To create the belief that the opportunity does not exist, security officers must take measures which place them most frequently in the locations of criminal activity at the times when that activity is greatest. In other words, the criminal must be convinced that there is such patrol coverage in such strength that the risks involved are too great.
 - ⇒ The criminal is a gambler. He measures his desire to commit a crime against the chances of being caught.

When the chances of apprehension are low, for example, when patrol coverage is weak or lacking, the crime will be committed and the criminal will escape.

- ⇒ Risks are considered to be too great where aggressive patrol impresses upon the criminal the idea that his activity will either be observed or will result in his apprehension.
- ⇒ The person planning a burglary can be convinced that the opportunity to do so does not exist where he knows patrol officers are active and alert. Just walking, or driving around your area is not patrolling, you must be active and alert.

5.1 Basic methods of aggressive preventive patrol

- ♦ Check frequently the physical security of business premises to prevent burglary and robbery.
- ♦ Check frequently the citizen - stop the suspicious person, question his identity and his activities, be constantly alert for persons within your area/shift.
- ♦ The law will allow officers to approach individuals consensually, but before conducting a field stop, the officers will need "reasonable suspicion" that a violation is occurring.

6. Conspicuous and inconspicuous patrol

"There are as many different methods of patrol as the imagination will allow. Determined by such things as types of crimes, location, and time, one method of patrol may be more effective than the next. Some methods of patrol are:

- ♦ External Patrols /foot patrols
- ♦ Vehicle patrols/motorcycles
- ♦ Bicycles
- ♦ Internal Patrol

REMEMBER.....

Again, our primary purpose for patrol is to prevent crime. So it is important to pick that type of patrol which will afford the most effective coverage. To simplify the choosing of a patrol method, we will discuss the two major types of patrol, conspicuous and inconspicuous patrol.

6.1 Conspicuous patrol

This is high visibility patrol with random movement in marked patrol cars. It involves activities which are intended to influence the perceptions of potential criminals as to the likelihood of their being apprehended. By increasing visibility and patrol presence, you intensify the perceived risk of crime and reduce its incidence. This is done by:

- ♦ Staying in the public's eye
- ♦ Patrolling troubled areas
- ♦ Field interviewing potential criminals

6.2 Inconspicuous patrol

The primary purpose is to catch the criminal in the act and make apprehensions, doing so by low visibility in unmarked cars, hiding when performing a foot patrol by:

- ♦ Walking in shadows
- ♦ Walking behind lights and
- ♦ Stop frequently to listen.

It is designed more for apprehension than prevention. Once arrests are made from this the word will travel there are officers in areas which hide or drive with unmarked cars in the area, and the presence of patrol will be reinforced, thereby adding to the prevention of further crime."

7. Patrol types

7.1 External Patrols

External patrols covers the grounds, parking areas and streets surrounding the facility buildings.

The basic purpose of the external patrol is.....

PURPOSE

- ♦ to protect vehicles and persons entering or leaving the grounds,
- ♦ to provide surveillance of persons attempting to use unauthorised exits,
- ♦ to prevent the carrying of unauthorised property from the facility,
- ♦ and to prohibit or discourage unwanted persons from enter the facility.

A security officer conducting an external patrol will greatly enhance the overall level of protection provided to a facility.

HOW

By constantly observing and noting any changes or discrepancies with doors, windows, lights etc. a security officer can determine unusual situations, which if reported can be properly investigated.

7.2 Vehicle patrols

Vehicle patrols: Can support external patrols either by supplementing foot patrols or in place of them. A prerequisite for a security officer prior to operating a motorised vehicle is to possess a driver's licence. A vehicle offers a security officer mobility while providing protection from the elements. Additionally a vehicle permits a security officer to carry more equipment which can be readily used when needed.

7.3 Bicycles

Bicycles: recently many security departments / companies especially those that serve a multi facility or campus type setting such as colleges and universities have incorporated the use of bicycles as part of their vehicle patrols.

7.4 Internal Patrol

Internal Patrol: internal patrols are a key element in an overall loss prevention program and are an integral part of the daily duties of security personnel. Generally internal patrols are conducted for the same reason as external patrols, to observe, act and report on abnormal or unusual conditions. As part of internal patrols, security personnel should include the following;

- Checking doors and windows, correcting and reporting abnormal conditions (i.e. open, closed, locked, unlocked)
- Checking machinery and/or maintenance instruments.
- Observing fire protection equipment (sprinklers, risers, fire exit, etc) for proper condition.
- General observations.

7.5 Assigned Areas

Assigned Areas: usually internal patrols are arranged in some sort of systematic manner which includes the times and routes of the patrols. Often a facility of considerable size will have various internal patrols which may be conducted simultaneously by two or more officers or may be alternately patrolled at prearranged times.

Whatever the situation it is essential that security officers remain in their assigned patrol areas unless requested to aid or assist someone. If the security officer is required to leave his assigned patrol area a supervisor or other officer must be notified.

7.6 First Patrol

First Patrol: whenever one security officer is relieving another at the change of shifts, after the normal discussion of events on the preceding shift, the relieving officer will often conduct a patrol of the facility. This patrol is the most important one since it is at the beginning of a shift. At this time, a security officer should note and correct any unusual occurrences. By documenting and correcting any problems during the first patrol, a basis for comparison will be established which may prove invaluable at a later time. During this first patrol the security officer will note the doors and windows which are opened or unlocked but should be closed and locked. Lights which are left on should also be noted. Particular attention should be given to those areas where problems have occurred in the past such as vending machines, cafeterias, rest rooms, conference rooms and executive offices. During subsequent patrols the professional security officer will be able to quickly determine if something is out of place because of the diligence paid during his/her first patrol.

7.7 Pattern Variations

Virtually every text book stresses the importance of varying the route and time of patrols. No two security officers conduct their patrols in the exact same manner. One officer may pay close attention to open doors and windows while another walks through out of the way places. The point to be made is that even patrols made in a reliable yet systematic routine diminish the effectiveness of patrols. Employees of the protected facility will often joke that they can set their watch to the patrols of a security officer. In an effort to break monotonous, routine patrols security officers must be creative, staggering the time and route of patrols. Merely conducting a patrol while simply “going through the motions” serve little use.

This can be done by making use of technology:

7.8 Watchclock Rounds

Watchclock Rounds: the use of a watchclock to record the time at which a security officer was at a particular location is still in use today. Many companies have changed to a computerised version of the watchclock which serves the same purpose, to provide supervision with a tool to document and evaluate the patrols of the security officer. A major problem with the watchclock system is the “punching of the clock system” becomes the primary objective of the security officer as opposed to observing, correcting and reporting on anything which appears out of the ordinary (Brislin 1995:59-65). Security officers must thus be still observant during patrols, and the focus during the patrol should thus not be to punch the clock. During ad hoc patrols security officers should walk in shadows and behind lights to observe suspicious actions and listen for information where criminal activity might be occurring on the premises.

7.9 Dog Patrols

Dog Patrols: The varied uses which dogs can be put to for security purposes are self evident, but a dogs value is mainly in using its natural instincts. They can never replace the presence of a man and anywhere they are used requires either a man always in attendance or available to visit. In most instances a dog and handler team is of more security value than two men, and the presence of a dog on guard duty acts as an invaluable deterrent. The way in which they are used necessarily depends on the circumstances and the area to be patrolled. Some of the main uses of dogs are;

- On normal patrol with a lead to improve the effectiveness of the handler by using their organs of sense, smell, and hearing for early detection of unauthorised strangers;
- As protection for the handler. They will act as a deterrent to attacks on the patrolling guard;
- For patrolling near vulnerable or high risk areas and premises;
- For searching premises in darkness, or where the layout is involved, and to find intruders quickly. Their acute sense of smell makes concealment in these circumstances of no avail;
- For apprehending intruders. It will be futile for a man to attempt to escape in the presence of a trained dog; and
- As companions for cash delivery men, or to be present as a deterrent when staff payouts are being conducted (Vogel 1981: 400)

[illegible]

STUDY UNIT 2

Identify and monitor security risks

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Explain what the term 'risk' is.
- ♦ Demonstrate knowledge by explaining what is meant by risk/threat elimination.
- ♦ Demonstrate knowledge and skills by performing a threat prioritization exercise.
- ♦ Demonstrate knowledge and skills by performing a threat analyses while doing a patrol.
- ♦ Use a security survey sheet to constantly monitor threats of a security site.

1. Introduction

The primary task of any security manager/supervisor is to identify security risks. If you are not able to identify security risks, you will not be able to reduce losses at your area of responsibility.

Contrary to believe internal threats these days (employee theft) are a bigger threat to the profitability of an organization than external threats. It is thus imperative that one analyze the internal and external environment for security threats.

PURPOSE

The purpose of this study unit is to assist the security officer/supervisor to identify internal and external security threats in his/her workplace.

2. What is a risk?

DEFINITION

According to Valsamakis et al (1996:24) Athearn & Pritchett define risk simply as a condition in which loss or losses are possible. Pure risks involve only the possibilities of loss or no loss.

Risk is associated with virtually every activity one can think of, but for the purpose of this program we shall limit the meaning of the word risk to **the potential threat a security officer may encounter whilst performing an patrol.**

Risk should not be confused with perils, which are the causes of risk and are things such as fire, flood and earthquake. Nor should risk be confused with hazard, which is a contributing factor to perils. Almost anything can be a hazard

EXAMPLE:

- ♦ a loaded gun
- ♦ a bottle of caustic acid
- ♦ a bunch of oily rags, or
- ♦ a warehouse used for storing paper products.

3. What is security?

DEFINITION

Security has been defined as the use of measures designed to safeguard personnel, to prevent unauthorized access to equipment, facilities, materials and documents, and to safeguard them against espionage, sabotage, theft, and fraud.

3.1 Risk elimination or control

Prevention through risk elimination or control, rather than insurance policies, is the best means of protecting assets. In addition, it is recognised that regardless the insurance coverage a company may have, full compensation for losses is virtually impossible.

DEFINITION

Risk elimination or control means:

The risk will generally be relocated to an area which is free from the natural peril that is to be eliminated.

3.2 Avoidance

Avoidance of losses consequently has become the interest of most organisations. Insurance generally is recognised as the second line of defence against losses that cannot otherwise be avoided.

DEFINITION

Areas prone to the occurrences of one or more perils will be avoided where possible.

EXAMPLE:

Areas prone to the occurrences of one or more perils will be avoided where possible.

4. Asset threat/risk prioritization

After the internal and external environment have been scanned for information on crime, it is necessary to identify assets that are going to be the most prone to criminal activity.

This is based on the information obtained from your patrol, internal and external environment.

Risk Control begins, logically, with the identification and classification of risk. To accomplish this task it is necessary to examine or survey all the activities and relationships of the enterprise in question and to develop answers to these basic considerations;

An asset may be defined as any tangible (visible e.g. physical) or intangible (invisible e.g. Electronic data, information, corporate image) resources, that directly contribute to the profitability or levels of service of the organization concerned.

4.1 Assets

What does the company own, operate, lease, control, have custody of or responsibility for, buy, sell, service, design, produce, manufacture, test, analyze, or maintain?

4.2 Exposure

What is the company exposed to that could cause or contribute to damage, theft, or loss of property or other company assets, or that could cause or contribute to personal injury of company employees or others?

4.3 Losses

What empirical evidence is available to establish the frequency, magnitude, and range of past losses experienced by this and other companies located nearby, performing a like service, or manufacturing the same or similar product (Broder 2000:7-8).

Establishing vulnerability involves identifying threats. Where could losses occur? How? What types of thefts might occur? What safety hazards exist? Security managers should consider their vulnerability to such risks as accidents, arson, motor vehicle theft, bombs, burglary, robbery sabotage etc with regard to each specific asset in the organization (Hess, K.M., Wroblewski, H.M. (1988:61).

The security officer can categorize assets that were lost in the internal environment as a result of crime.

The assets identified needs to be prioritized in accordance to;

- ♦ **Threats**: This can be explain by answering a simple question. What is the possibility and or probability that assets or anything else will be stolen.
- ♦ **Consequences**: If something gets stolen, what will the consequences be for the business. One can further simply it by asking yourself the following question. Will business be interrupted.
- ♦ **Vulnerability**: How vulnerable is the business. Is it easy to steal anything considering the current security measures.

Frequency of Specific Asset Losses

Severity of loss	High	Medium	Low
High	<u>Intellectual property:</u> Theft-Avoidance	<u>Cable theft:</u> Loss prevention and avoidance	<u>Motor vehicle theft:</u> Transfer via insurance
Medium	<u>Computer thefts:</u> Avoidance and loss prevention	<u>Adio visual theft:</u> Loss prevention and transfer via insurance	<u>Paper theft:</u> Assumption and pooling
Low	<u>Time clocking and attendance:</u> Loss prevention	<u>Printer cartridges:</u> Loss prevention and assumption	<u>Stationary theft:</u> Assumption

5. The threat assessment

To assess security measures one needs to conduct a security survey/audit of existing security measures. The survey/audit sheets needs to be designed to assess all physical security measures and internal control mechanisms, with a specific focus on assets that were identified as prone to criminal activity.

DEFINITION

A security survey is a complete inspection analysis of either residential or commercial facilities for the purpose of determining security breached/flaws.

Security surveys involve on site evaluation by the security officer performing the patrol.

The security survey can take many forms, and because of the diversity of facilities and communities, no one standard checklist will totally suffice. Therefore, it is often necessary to devise a specific survey to suit a given situation.

Security surveys have three principal objectives leading to the ultimate goal of crime prevention.

5.1 Make an assessment of the facility's present security status.

To accomplished the above objectives you need:

- ♦ a detailed analysis and examination of the present external and internal lines of defence of the facility.
- ♦ An in-depth inspection should be conducted on the following factors:

The facility's surrounding grounds:

- ♦ security lighting
- ♦ Doors
- ♦ Windows
- ♦ Locks
- ♦ alarm systems
- ♦ and structural and environmental design.

EXAMPLE:

For example, in retail business security surveys should include:

- ♦ Receiving areas
- ♦ Delivery areas
- ♦ Shoplifting
- ♦ Employee theft

5.2 Recommendations and monitoring

Recommend security improvements that would make it more difficult for the potential offender to commit an offensive at the physical facility.

This objective is achieved through providing specific security recommendations based on:

- ♦ the results of the survey
- ♦ the characteristics of the area in which the structure is located.
- ♦ the degree of security required.
- ♦ and the individual's or the organisations financial ability to adopt security recommendations (O'Block 1981:253-254).

6. The security survey

According to Hess & Wroblewski (1988:62) the following topics need to be considered in a security survey;

AREA (DUTIES): WHERE WILL THE SECURITY EMPHASIS BE PLACED?	
1.	Parking
2.	Visitor Control
3.	Hazards (man made and environmental)
4.	Employee pilferage
5.	Outside Losses
6.	Disaster Planning / Civil Disturbance
7.	Fire / Safety Responsibility
8.	Special Events
9.	Buildings

This is only some of the considerations, internal control measures can also be surveyed in the case of employee theft.

According to Hess & Wroblewski (1988:62-63) the actual survey can be in the form of a checklist, prepared with adequate space between entries for detailed notes.

One of the most valuable contributions made by security surveys is the opportunity they provide in terms of determining the extent to which all aspects of the site/client security measures have been implemented.

Please find the attached examples of typical security survey sheets to be used during your patrol.

6.2 Conducting the survey

The security survey must be conducted whilst doing a detail patrol on the site.

A practical example of a survey/audit sheet on physical security measure.

PHYSICAL SECURITY SURVEY OF MOKWENA PUBLISHERS

NO.	ASPECTS	EFFECTIVENESS	WEIGHT VALUE
1.	Doors	0-10	10
2.	Windows	0 - 5	5
3.	Exterior Lighting	0-10	10
4.	Offices	0 - 5	5
5.	Keys	0-10	10
6.	Locks	0 - 5	5
7.	Access Control	0-10	10
8.	Building Security	0-10	10
Total			65
Overall Security Level = 33.84%			

Weight value is allocated to a criteria point based on the vulnerability of a security site.

PHYSICAL SECURITY SURVEY: MOKWENA PUBLISHERS				
Nr.	Physical Characteristics	YES	NO	Comments
1.	Doors			
1	Are all doors strong locked	10		Yes- Solid Doors
2	Are all door frames well constructed and in good condition?	10		Solid steal frames
3	Are all locks working properly – in-side?	10		Yes serviced regularly
4	Are all locks working properly - external?	10		Yes serviced regularly
5	Are all the keys booked in at the control room.		0	No records and key control system
6	Are keys issued to personnel who actually need them?		0	No records
TOTAL		40/60		
2	Windows			
1	Are all windows closed?	5		Solid 20 mm iron bars
2	Are the burglar proof bars mounted securely?	5		Mounted with roll bolts
3	Are small items left in windows overnight?		0	Yes – on inspection several items were found i.e. radios, clock radio's etc
4	Can windows be removed without breaking them?		5	
5.	Are unused windows permanently locked?		0	
TOTAL		10/25		
3.	Exterior Lighting			
1	Is all the lights in working condition	10		
2	Is all the areas sufficient illuminated	10		
3	Are the perimeter areas lighted to assist security surveillance of the area?		0	Not sufficient lights on perimeter.
TOTAL		10/30		

Nr.	Physical Characteristics	YES	NO	Comments
4.	Offices			
1	Can entrances be reduced without loss of efficiency?		5	One entrance is open during the day.
2	Are office doors locked when unattended for a long period of time?		0	Several offices were found open during the survey
3	Is there a clear view from receptionist's desk of entrance and stairs?	5		
4	Are maintenance people, visitors etc required to show identification at receptionist?	5		
5	Are desks and files locked when office is left unattended?		0	
6	Are items of value left on desks or in an unsecured manner?	0		Cell phones, purses etc were found unattended during the survey.
TOTAL		10/30		

5.	Keys			
1	Total Keys issued? Total Masters?		0	No record
2	Is there a key control system?		0	No system in place
3	Is an adequate log maintained of all keys that are issued?		0	
TOTAL		0/30		
6	Locks			
1	Are all entrances equipped with secure locking devices?	5		Security locks was installed on 23/12/2006
2	Are they always locked when not in active use?		0	Several locks were found open during the survey period
3.	Are all locks in working order?	5		
4.	Are the screws holding the locks firmly in place?	5		
TOTAL		15/20		

7.	Access Control			
1	Is there any access control?	5		Visitors report at the receptionist
2	Are there any unprotected entrances?	10		No security access control, only a roaming guard, receptionist at entrance door performance security duties effectively, as she confirms appointments.
3	Person registers filled in?		0	No access control procedures in place
4	Disclaimers signed by visitors?		0	No access control procedures in place
5	Schedules of expected visitors circulated?		0	No schedules are circulated
6	Visitors fetched by staff members?		0	No free access to building
7	Visitors escorted to door after visit?		0	No free access to building
8	Visitors card issued?		0	No cards are issued
9	Visitors card reclaimed after visit?		0	No cards are issued
	TOTAL	15/90		
8.	Building Security			
1	Are building inside a security fenced area?	10		
2	Can objects be thrown into windows?		10	
3	Can entry be gained through floor/roof?		10	Solid concrete floor
4	Are there any holes in perimeter walls?		10	
	TOTAL	10/40		
	A = Total Points Obtained =	110		
	B = Not Applicable Points =	325		
	A divided by B and multiplied X 100 = % Score	33.84%		

Although the above-mentioned survey sheet serves only as an example, one can conclude that the security level is 33.84%.

This means that the current security program only complies with 33.84% of the desired standard as generated in the survey/audit sheets.

IMPORTANT

These findings will form the basis of your recommendations and monitoring to ensure that crime is not committed during your shift. All the vulnerabilities have now been identified and can be recorded on a daily bases.

7. Minimisation of security risks

According to Auerbach (2002:357) Risk Management in the context of crime/loss prevention can be defined as.....

DEFINITION

.....the anticipation, recognition, of a risk and the initiation of some action to remove the risk or reduce the potential of loss from it to an acceptable level.

To properly apply any crime or loss prevention techniques i.e. security patrols the security officer must understand the basic concepts of risk management.

DEFINITION

Security is a pure risk and can be defined as any situation where there is no possibility for any benefit, only for cost or loss.

From the definition of the term **Risk Management** it is clear that security patrols plays an important role in the recognition of safety and security risks. Security patrols helps to minimise security risks and will aid the total Risk Management program of the client or company to whom a security service are rendered.

Security patrols assist in particular with the following to **minimise security risks**:

- **Anticipation:** During patrols security officers must determine the likelihood or probability of loss in his/her area of responsibility. The security officer must report these areas and conditions to his manager, and must focus on these areas during routine security patrols.
- **Recognition:** During patrols the security officer can recognise crime threats. The recognition of a crime or loss risk is the first step to remove or reduce a loss opportunity.
- **Appraisal:** As a security officer is usually assigned to a specific area, he can appraise security risks during routine patrols. He must report his/her findings to his supervisor.

[illegible]

STUDY UNIT 3

Reporting systems

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Explain and understand why safety and security breaches needs to be reported.
- ♦ Complete the following reporting instruments as a method of reporting incidents:
 - ⇒ Operational security report.
 - ⇒ Statement.
 - ⇒ Occurrence book
 - ⇒ Pocket book
 - ⇒ Incident report
- ♦ Explain the important issues that needs to be reported during a security patrol.
- ♦ Explain the consequences for not reporting security concerns.

1. Reporting safety and security breaches

IMPORTANT

It is important that all safety and security breaches are recorded and reported. According to Brislin (1995:100) written reports have existed since men and women were first able to read and write. Documents such as the Bible and Koran have existed for thousands of years. These books are considered to contain detailed reports of mankind's years on earth during the past 5000 years.

Because past events were recorded in writing, permanent records exist which allow generation to generation to learn the exact same information. The comment, "If it's not written, it didn't happen", is of particular importance in the study of history.

For security personnel, written reports are used for several purposes;

PURPOSE

- To provide a permanent record of an incident;
- To verify the job duties performed;
- To explain confusing incidents;
- To provide evidence in a legal proceeding; and
- To provide information for follow up action.

Provided that security reports are clear, concise and accurate, a security department/company will maintain a high degree of credibility within an organisation. Security logs and reports are subject to being used in court proceedings both civil and criminal.

CRITICAL

It is essential that security officers factually record all information in their logs and reports which answer the following;

- Who?
- What?
- When?
- Where?
- Why?
- How?
- Conclusions?

Answering the above mentioned questions seems very simple, but security officers will often fail to answer these basic questions. In fact many times security officers fail to write reports or document incidents whatsoever. When information is not documented and a security officer is called at home to answer a question, the credibility of the officer and the entire security organisation is damaged.

Out of the above explanation it is very clear why it is important to record incidents that were discovered or witnessed during a security patrol. The most commonly used registers and methods to record incidents that was discovered or witnessed during a security patrol are the operational security report, statement, pocket book and occurrence book.

Abrie & Bezuidenhout (2006:14) provide the following examples of a security report and statement with regard to a housebreaking and theft that was discovered during a security patrol:

2. Methods of reporting

2.1 Operational report

OPERATIONAL SECURITY REPORT

Complainant: Mr R Ramoba – Security Officer - XXX Security		Contact Details: 012-4291111
Offence: Housebreaking and Theft		Security Report Nr: 13/08/2005
Short Description of Offence: On 2005/08/13 at 20:30 Mr R Ramoba a security officer of XXX Security conducted a security patrol on level 3 in the BB building. Mr Ramoba discovered a broken window next to the computer lab. Mr Ramoba reported the security breach to his first line security manager Mr Maseko. Mr Maseko inspected the computer lab and determined that a laptop computer was stolen from the lab.		
Suspect Description: No description available.		
Witnesses: No witnesses could have been identified.		
Report Opened By: Mr J Ramoba – Security Officer – XXX Security	SAPS Reference Number: S/Side MAS 123/08/05 Investigation Officer: Inspector Botha tel (012) 321 4333.	Security Reference Number: OB 123/08/2005

An example of a statement that can be attached to the security report and insurance claim is as follows;

I Jacob Ramoba states under oath in English;

I am an adult male ID 6004045008086 residing at 223 Meur Street S/Side Pretoria (Tel) 012-444 3223 and working as a security officer at XXX security Tel(012) 323 4334.

On 2005/08/13 I was posted at building BB at the XXX facility. As part of my duties I must patrol the building on the hour to determine whether there were any security breaches. At 20:30 I started with a routine security patrol of the building. During this patrol I discovered a broken window on the 3rd level of the building next to the computer lab.

I immediately contact my first line security manager Mr Maseko, who responded to the 3rd level of building BB and arrived at the scene at approximately 20:45. Mr Maseko opened the computer lab and verified the computer equipment against the inventory list. Mr Maseko determined that a Mecer laptop serie: 4342222 was missing. Mr Maseko then instructed me to safe guard the crime scene and not to allow anyone on the scene until the police arrive. The police arrived on the crime scene at approximately 21:00.

When I conducted my patrol at 19:30 the window was not broken at the computer lab. The following persons were registered in the after hour visitor register, who was in the building during the housebreak;

1. Mr van Zyl - Director XXX Finances - Mr van Zyl entered the building at 18:00.
2. Mr Dlamini - Production Manager - Mr Dlamini entered the building at 18:20.

I do not suspect anyone in particular of the crime. This is all I can declare.

I know and understand the contents of this declaration.

I do not have any objection to taking the prescribed oath.

I consider the prescribed oath to be binding on my conscience.

.....
Jacob Ramoba

2.2 Occurrence book entry

An occurrence book is used to record all security related activities that occur during your period of duty.

EXAMPLE:

The following examples of information could be included in the occurrence book:

- ◆ Reporting on and off duty.
- ◆ Crimes committed during your duty.
- ◆ Arrest made.
- ◆ Actions resulting from the arrest.
- ◆ Accidents that occurred during the duty.
- ◆ Damage to property.

EXAMPLE:

- ◆ Special duties that you may have executed.
- ◆ Visits made by supervisors or other staff members.
- ◆ Patrols undertaken - including the time the patrol started and ended and where it was done.
- ◆ Any unusual incidents that occurred.
- ◆ Complaints received.
- ◆ Security breaches.
- ◆ Items found.

TAKE NOTE

Keep the following in mind when writing entries into your occurrence book:

- ◆ Number your entries in a chronological sequence starting with one.
- ◆ Ensure the correct date, month and year is recorded in the occurrence book.
- ◆ Make entries in the order in which they occurred and make sure the correct time is allocated to each event.
- ◆ Use black ink to write and red ink to underline. Registers are usually inspected in red ink.
- ◆ Write neatly and legibly.

There are various ways that an occurrence book can be laid out. This will differ from company to company.

See example which you may adapt to meet the requirements of your company.

The occurrence needs to be completed by adhering to the following steps.

Step 1: An Occurrence Book must be in place at every security-controlled site.

Step 2: Books must be numbered.

Step 3: Every page must be numbered.

Step 4: No pages to be removed.

Step 5: Each page must consist of:

- ♦ **Heading**
- ♦ **Day of week and date**
- ♦ **Three columns for:**
 - ⇒ **Serial number:** To be numerical. Beginning with no 1 for each new month.
 - ⇒ **Time:** The exact time when occurrence happened.
 - ⇒ **Nature of occurrence:** Starting with a keyword and must be underlined in red pen. Following by the full details of occurrence. After each entry, one line must be left open.

Step 6: KEYWORDS: On duty, Off duty, Patrol, Report, Handing-over, Visit, Inspection, Late entry, Incident, Supervisor visit, etc.

Step 7: Use the OB 24 hours a day for the following:

- ♦ Booking on/off duty.
- ♦ Handing-over of duties & equipment
- ♦ Details of patrols according to the Work Instruction for Patrols
- ♦ All incidents
- ♦ Crime
- ♦ Safety Hazards
- ♦ Abnormalities
- ♦ Irregularities
- ♦ Full report on duties done

Step 8: Maintenance of OB:

To be inspected and signed by Security Supervisor twice a month and once a month by the contract Manager. Alternatively your company will determine otherwise.

Occurrence Book that is completed in full must be handed over to the Manager for safekeeping/references.

The record keeping period for an Occurrence Book is 5 years.

2.3 Pocket book

Pocket books are small A-6 books that each security officer must keep with them at all times and are checked by supervisors and management. These books are used to assist the security supervisor to maintain a high standard of control of all staff and to monitor the activities of officers. Any deficiencies in the security system through entries made by his/her staff members should also be followed up. When a pocket book is full, it is handed in and a new one will be issued to the security officer as per company procedure.

The reasons for keeping the pocket book are:

- ♦ Keep records of duty hours on site.
- ♦ Keep notes, orders and instructions.
- ♦ Document items when away from the occurrence book.
- ♦ Record necessary details to use at a later stage.

TAKE NOTE

No personal telephone numbers or scribbling is allowed. You may also not tear out pages of the pocket book. This book is used as an aid to a security officer within the work environment.

EXAMPLE:

Example of Pocket book entry

2005/08/13 21:00	Housebreaking and Theft Report: On 2005/08/13 at 20:30 during a routine patrol I discovered a housebreaking and theft at the computer lab of Building BB. No suspects or witnesses could have been identified. I secured the crime scene and no one was allowed to enter the scene.
	I reported the matter to Mr Maseko my security manager, and the SAPS investigated the crime scene. SR Reference Number 13/08/2005 and OB Reference Number 123/08/2005.
	Signed: J Ramoba

2.4 Incident report

Example of incident report

INCIDENT REPORT

Day/Night: _____ Date: _____ Time: _____

INFORMANT (Print) Name: _____ Co No: _____

Company: _____ Section: _____

Telephone: _____ Extension: _____

NATURE OF REPORT: _____

Summary: (Remember Who, What, When, Where and How) _____

INCIDENT:

ACTION TAKEN BY SECURITY:

FURTHER ACTION TAKEN:

RECOMMENDATIONS/COMMENTS:

Copy to client: _____ Date: _____

3. Consequences of not reporting security concerns

If security breaches and concerns are not reported it can not be rectified. If a break in a fence is not reported it can not be repaired and it can expose the security program as goods and materials may be stored too close to the fence. Some aspects that must be checked by security officers for reporting purposes are;

- Breaks in fences as explained above;
- Defective locks on warehouses, stores and offices;
- Vehicles of employees in car parks. Inform owners if lights are left on, tyres have been punctured, or of any interference with vehicles;
- Interiors of empty railway and delivery trucks waiting to leave the premises. Stolen property could be stored inside them;
- Property left in the open. Make sure that it is not exposed to the weather;
- Security officers must report any defects in roofs, gutters, or open windows through which water could enter the premises;
- Security officers must report suspicious people or vehicles hanging about outside the premises;
- Security officers must challenge everyone found on the premises after hours. If unauthorised, detain if possible, and report to the control room; and
- Security officers must report leaking external water taps, pipes and blocked drains (Mackenzie et al 1983:150).

Supervisors and management usually leave instructions in the security instruction register. Security officers must interpret the instructions before conducting patrols, as certain areas may be required to be patrolled more intensively.

[illegible]

STUDY UNIT 4

Patrol preparation

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Demonstrate knowledge pertaining the importance of patrol preparation.
- ♦ Demonstrate knowledge of patrol preparation by explaining the various role players involved during patrol preparations.
- ♦ Demonstrate knowledge and skills by explaining maintenance check for all security equipment applicable to patrolling.

1. Introduction

Being able to perform the job that is expected of a security officer begins long before the officer arrives at work. "Preparation should be a daily ritual for the survival of you and other officers. There are several considerations in the daily preparation prior to your patrol. As security officers, we must be prepared for everything and not become complacent with this preparation."

2. Personal appearance

An individual cannot "police" the community if they cannot "police" themselves. Each officer should never forget that they are public servants, and as such, the company that they represent exists for the purpose of serving the public.

When a client calls and requests assistance from the control room, the client is entitled to and expects prompt, efficient, and courteous service. Because first impressions are so important and lasting, good personal appearance is vital.

3. Equipment

Once an officer is on patrol, he/she may not be able to run back to the control room and pick up necessary equipment (equipment that might save their life or the life of another person). Therefore it is of the utmost importance that officers inspect their equipment daily to ensure that it is working properly. These equipment includes but are not limited to:

3.1 Credentials

Security officers should carry their I.D. or credentials with them while they are on duty. Even though they likely will be wearing a uniform, they still may be asked to provide identification, especially when approaching a suspect.

3.2 Keys

While on duty, individuals should only carry the keys to their patrol vehicle, if necessary some office keys and their handcuff key. They should secure their personal keys back at the control room. By doing this, security officers lessen the chance of losing their personal keys, or if in the event they are confronted by suspects.

3.3 Two way radios

Make sure the batteries are fully charged, the radio is working properly, and that you are operating on the right channel or frequency.

3.4 Handcuffs

Handcuffs should be cleaned and oiled according to manufacturers' specifications. The locking mechanism should be free of obstructions such as lint, hair, blood, and/or foreign substances. Always check for bent, broken, or missing ratchets (teeth). If any are observed, the individual should obtain another set of handcuffs. Make sure that the handcuff key that you carry is not broken or bent and that it double-locks and unlocks the handcuffs that you carry.

3.5 Firearms

Officers should always carry their issued or authorized firearms in accordance with

3.6 Flashlight, light, and batteries

You should always have a flashlight available, even during daylight hours, for searching basements, attics, closets and other low-light environments. Maintain fresh or recharged batteries and spare bulbs at all times.

3.7 Documentation

Make sure you have an adequate supply of forms that you might need during the course of your patrol such as blank field notes, inventory/property receipts, and investigation forms.

3.8 Pen/pencil

Every officer should have an adequate supply of black ink pens that work and a supply of sharpened pencils. Pencils will be advantageous when making crime scene sketches or other drawings or when filling out forms during inclement or rainy weather. When using pencil, do not erase. Mark through mistakes with a single line and initial the change.

3.9 Pocket book

Companies often issue pocket books. These pocket books should be maintained by officers on a day-to-day basis, which includes dates, times, and other pertinent data. The pages should not be removed and the complete notebook should be filed for future reference by chronological sequence.

3.10 Batons

Batons should be checked daily to make sure they have not been broken, bent or cracked. Expandable batons should be checked to ensure the expanding parts are free of obstructions such as lint, dirt, or oily substances that may not prevent them from being used properly.

3.11 Mace/OC pepper canisters

Canister should be inspected for amount, any leakage, and expiration date if applicable. The trigger or firing mechanism should be checked to make sure it is free of obstructions.

3.12 Electronic equipment

Security officers should check with their companies for the availability of items like patrolman sticks, cameras, and cell phones and follow the guidelines that relate to the use of such items.

3.13 Body armor

It is well documented from statistical data that security officers wearing body armor increase their likelihood for survival in a deadly force encounter. Officers should check with their individual companies for the availability of such body armor.

4. Role players involved in preparation

The following must be considered when officers plan for their patrols;

Role Players: security officers must determine who the role players are in terms of their roles and responsibilities at the facility.

It is of the utmost importance that security breaches detected during security patrols are reported to the correct agencies:

- ♦ Backup patrol officers
- ♦ SAPS
- ♦ Emergency Services
- ♦ Site managers
- ♦ Control supervisor

This should be done in accordance to company / facility standard operating procedures.

High Risk Areas: where is the areas at the facility that are vulnerable for criminal activity? What is the desired frequency of patrols to the area? What assets is the most prone to criminal activity?

Patrol routes: The route of patrol should be determine beforehand and should never be the same.

Communication: Is the two way radios in working condition? How are security breaches going to be reported? Are there cellular phones available for clandestine communication?

5. Basic maintenance check of security equipment

5.1 Communication equipment - two-way radio

During hand over and take over of shifts the officer needs to take note of the working conditions of the following:

- ♦ Antenna
- ♦ Battery
- ♦ On/Off switch
- ♦ Volume
- ♦ Squelch
- ♦ Radio number
- ♦ Condition of radio
- ♦ Channel

Pre and post-shift checks

- Check for visible signs of damage to the casing of the HHMD.
- The unit operates with a normal carbon-zinc battery and the internal circuitry incorporates a low battery warning, which consists of a constant audible alarm. When hearing this alarm, the battery should be changed immediately as the unit will not operate properly with a low battery. It is always a good idea to carry a spare battery with you.
- Test the unit on yourself or a colleague before going on duty, to make sure that it will sense metal objects.

- Be sure to switch OFF the power after use.
- The battery shall be taken out when detector will be kept unused for long periods.
- No sound will be produced when the probe is fixedly positioned to the metal object. Sound is produced only when the probe crosses the metal object.
- Be sure to switch off the power when the battery is re charged.
- Charger voltage: 9v for AC; 10v for DC.

5.2 Flashlight

At least twice yearly, clean threads and O-rings with clean cloth and apply a thin coat of silicone-based grease or lubricant to both. If flashlight is used in wet environment, lubricate O-rings frequently to maintain watertight seal. After prolonged exposure to moisture, the bezel, lamp, and batteries should be removed, inspected, and dried if necessary.

Pre shift check

- ♦ Check the lamp
- ♦ Check the battery
- ♦ Check the general condition of the flashlight.

Post shift check

- ♦ the lamp
- ♦ Check the battery
- ♦ Check the general condition

5.3 Batons

Pre-shift checks

Belt clip

- No tears or damage to the canvas material.
- The metal rivets are securely in place
- No cracks or breakages on the plastic ring.

Baton

- Batons are durable and do not need a lot of maintenance.
- Check for visible signs of wear and tear, cracks and breakages.
- Do not accept faulty equipment when starting your duty.

Post-shift checks

- Same as for pre-shift checks.

5.4 Video equipment/Electronic equipment

The security officer should do a check to ensure that all the VCR's are actually recording as they should be. A check should also be done to see that everything that should be on 'record' is in fact on 'record'.

Alarm checks:

On each shift the camera security officer should do an alarm check by checking all the alarms and panic buttons. This can be performed before assuming duty to ensure all the equipment is in good working condition.

The alarm check sheet needs to be checked, their location, their code number, the telephone number to phone when doing the check and a place to mark whether the alarm is working or not

Once completed, an OB entry should have been made stating the:

- ♦ time;
- ♦ which of the alarms are not working;
- ♦ and which of the alarms were not tested due to no personnel being present.

Ensure that all electronic equipment is in good working condition. This can be done by:

- ♦ Ensuring that each of the equipment can power on and off.
- ♦ Ensure that each of the equipment is still in working condition by authenticate the previous shifts recordings.

5.5 Handcuffs

Pre-shift checks

Pouch

- No tears in the canvas material.
- The metal rivets are securely in place with no tears in the material around them.

Handcuffs

- Handcuffs are durable and do not need much maintenance. Check for visible signs of wear and tear, cracks and breakages. Test the ratchet and locking mechanisms daily and oil them lightly from time to time.
- Ensure that the key unlocks the locking mechanism.
- Do not accept faulty equipment when signing on for duty.

Post-shift checks

- Same as for pre-shift checks.

CUFF CASE

HANDCUFF KEYS

THE CUFF

THE CONNECTOR

5.6 Offensive and defensive equipment

Pre and post shift checks

- Ensure that the safety seal, which indicates whether the trigger has been activated, is still in place.
- You should be issued with a pouch that holds the canister. Make sure that this pouch is not damaged in any way.
- Check for visible sign of damage to the canister, trigger and safety seal.
- As a rule of thumb, the weight of the canister will indicate if it is still full.
- If the seal has been broken, the trigger or pouch damaged or it feels very light, refuse to accept it and request a new canister.

IMPORTANT

Do not leave your defense spray in any area that may exceed 125 degrees or drop below -15 degrees. Excessive heat or cold may cause the can to leak or burst.

5.7 Bulletproof vest.**Pre-shift checks****Vest/jacket**

- No tears in the canvas material.
- The metal rivets are securely in place and have no tears around them.

Plates

- Check for visible signs of wear and tear, cracks and breakages.
- Do not re-use if it has been punctured by a bullet.
- Do not accept faulty equipment when signing on for duty.

Post-shift checks

- Same as for pre-shift checks.

5.5 Handcuffs

Pre-shift checks

Pouch

- No tears in the canvas material.
- The metal rivets are securely in place with no tears in the material around them.

Handcuffs

- Handcuffs are durable and do not need much maintenance. Check for visible signs of wear and tear, cracks and breakages. Test the ratchet and locking mechanisms daily and oil them lightly from time to time.
- Ensure that the key unlocks the locking mechanism.
- Do not accept faulty equipment when signing on for duty.

Post-shift checks

- Same as for pre-shift checks.

THE CUFF

THE CONNECTOR

Care and maintenance

Studies show that age alone does not cause the ballistic resistance of armor to deteriorate.

The kind of care and maintenance the garment receives is a more important factor. Although the label on NIJ-listed body armor provides general guidelines for the care and maintenance of your armor, follow these additional DO's and DON'Ts:

- **DO** follow the manufacturer's instructions for the care and maintenance of your armor.
- **DO** hand wash your armor with a mild detergent in cold or warm water, and rinse it thoroughly to remove all traces of detergent.
- **DO** drip dry the armor indoors.
- **DO** regularly inspect your armor for cuts, tears, and other damage to the carrier and ballistic elements.
- **DO** contact the manufacturer with any questions about cleaning the armor.
- **DO NOT** machine wash or dry your armor; machine laundering can affect the ballistic material.
- **DO NOT** use bleach or products containing bleach in laundering your armor.
- **DO NOT** use commercial laundries because they may use harsh chemicals that can affect your armor's protective capabilities.
- **DO NOT** dry clean your armor because dry cleaning solvents can affect your armor's protective capabilities.
- **DO NOT** dry your armor outdoors. Some ballistic fabrics degrade as a result of ultraviolet exposure.
- **DO NOT** attempt to make repairs to your armor. Armor should be returned to the manufacturer for repairs or replacement.

[illegible]

STUDY UNIT 5

Conduct the patrol

LEARNING OUTCOMES

On completion of this study unit the student will....

- ♦ Demonstrate knowledge and skills in approaching techniques for the following:
 - ⇒ Approaching/interacting with individuals
 - ⇒ Approaching whilst performing vehicle patrol
- ♦ Demonstrate knowledge by explaining a standard operating procedure applicable to conducting patrols.
- ♦ Explain key elements for detaining persons when committing a criminal offense.
- ♦ Demonstrate knowledge and skills by explaining the conclusion of a security patrol.
- ♦ Demonstrate knowledge and skills by explaining the procedures when dealing with found property whilst performing a patrol.

1. Approaching/interacting with individuals

One of the primary responsibilities of all security officers is to effectively interact with all types of people that either live, work, eat, meet, or move in their respective patrol zones.

Being able to productively communicate with people from various socio-economic and cultural backgrounds is an important requirement of the job. Safely approaching individuals on the street or in businesses is a critical patrol function. It is very easy for officers to see this activity as "routine," but they must remember that every client contact is unique and can be potentially dangerous.

1.1 Non-threatening contacts

Security officers are expected to make regular contact with the clients at their sites during a shift. They will interact daily with:

- ◆ Small business owners
- ◆ Store clerks
- ◆ Neighborhood residents
- ◆ School children
- ◆ Accident victims
- ◆ Health care professionals
- ◆ Etc.

As security officers talk with some of the above listed individuals, they should still maintain a safe reactionary gap, observe the individual's hands and body movements, and maintain an appropriate interview stance.

1.2 Threatening contacts

Security officers will also interact with threatening individuals as they patrol their areas in their shifts. These individuals may be:

- ◆ Suspicious individuals walking on the street
- ◆ Individuals hanging around a convenience store/office or building.
- ◆ Teenagers standing on a corner, flagging down passing vehicles
- ◆ Any individual that seems to be out of place for the environment they are in.

2. Approaching, and stopping suspicious persons

Inquiries are considered to be a necessary part of aggressive patrol and play an important part in the prevention of crime. To approach a subject, not knowing whether they are a law-abiding citizen or a criminal, requires a great deal of tact, courtesy, and caution. Any approach may result in a foot chase for one reason or another.

2.1 During foot patrol

Waiting for the proper time and location to stop the subject is as important as the stop itself. Therefore, you may have to follow the subject until the situation presents itself to your advantage. While tailing this person, the officer should follow these procedures:

- ◆ Contact the control room and provide the following information:
 - ⇒ Location of activity
 - ⇒ Number of individuals
 - ⇒ Short description of individuals Try to identify the person, not just the clothing.
 - ⇒ Nature of contact
 - ⇒ Any vehicle information, if pertinent
 - ⇒ Start back-up officer
- ◆ Use concealment and cover when possible to conceal your movements. Care should be taken so as not to draw attraction to your movements. Stay in shadows and behind lights.

DEFINITION

Concealment means prevention from being seen by a criminal. It may be provided by natural or man-made objects; bushes, brash, small trees, tall grass, heavy shadows, smoke, crowds, lines of moving vehicles - anything that will hide your presence or movements from your adversary. Concealment keeps you from being a clear target. However, concealment alone will not stop bullets; it is not covered from fire.

DEFINITION

Cover is an object that will stop incoming fire towards you. An example of this is concrete pillar, dustbin or vehicle. Remember if you take cover behind a vehicle use the engine side. A bullet will penetrate through the luggage compartment.

Usually cover incorporates concealment, but its salient feature is its capacity for protecting you from being seen.

Darkness is not cover merely because it can hide you only. It is tempting to think of darkness as a shield. Standing back in shadow can give you good concealment.

Night time shadows can sometimes be turned into traps by an unexpected swing of cars headlights. Finding genuine cover and keeping it between you and your adversary is as important in the dark as it is in the daylight.

- ◆ Make your movement as casual as possible. Make him believe that he is the farthest thing from your mind.

2.2 During vehicle patrol

The location of the initial stop should afford the officer the best possible safety.

Every effort should be made to reduce the avenues of escape.

- ♦ Stop in the middle of the block, using the building walls as barriers.
- ♦ Avoid stopping near alleys or passage ways.
- ♦ Avoid obstacles which would block your vision if the subject flees.
- ♦ Avoid crowded areas where subject could be lost in the crowd, take hostages, or endanger people.
- ♦ At night, select a well-lighted area.

3. Approaching technique whilst performing vehicle patrol

You should use the element of surprise to your advantage by practicing these procedures:

- ♦ Approach the subject from the rear.
- ♦ If you are traveling in the same direction as the subject, gradually gain distance on him to make contact in your chosen location.
- ♦ If traveling in the opposite direction, pass the subject and then turn around and approach him.
- ♦ Do not yell or speak until you're within a desired distance.
- ♦ Be alert for danger signs and watch the person's hands. Watch for signs of a decision to run.
- ♦ Do not call the person to your patrol vehicle while you remain seated. This is a dangerous practice.

If the subject stops and you make contact, a friendly approach is important. Even if the subject cooperates fully, there are several safety procedures which the officer should practice.

- ♦ Maintain a little more than an arm's length between you and the subject.
- ♦ Stand at a 45 angle with your firearm/baton away from the subject.
- ♦ Never get between multiple subjects.
- ♦ Watch their hands.
- ♦ Keep your strong hand free at all times.
- ♦ While obtaining information, never lose sight of or turn your back on the subject.

During your conversation, some persons may readily make available their identification and information without prompting by the officer. However, it is the officer's responsibility to try and establish the true identity of the subject and obtain general information pertaining to his presence in the area.

- ♦ To verify the person's identity, the officer should request identification and match the picture on the ID with the subject.
- ♦ Question the subject about information on the ID, such as address and date of birth.
- ♦ Have them remove their identification from their wallet, never accept or handle the subject's wallet.
- ♦ Properly report and record information obtained.

4. Standard operating procedures

It is important to note that each security site/company will have a standard operating procedure that needs to be followed while performing a patrol.

Step 1: Book on duty in Occurrence Book.

Step 2: Book out on patrol in Occurrence Book.

Step 3: Inspect the following for any abnormalities:

- Fence
- Material
- Assets
- Buildings
- Vehicles
- Any other irregularities

Make notes in Pocket Book.

If any abnormalities are found, report it immediately to your Supervisor for rectifying.

Step 4: Book back from patrol in Occurrence Book.

Step 5: Note all abnormalities in the Occurrence Book and also states to whom you have reported it.

Step 6: Report abnormalities to colleague when changing shift.

Number of patrols, in a shift cycle, as per specified site, will be communicated by the Supervisor

Step 7: Book off duty in Occurrence Book.

5. Detaining persons who have been deter an detect

A key element of security patrols is not only to **deter and detect** security breaches, but also to detain persons who committed criminal offences. Security patrol officers should however take note of the following:

TAKE NOTE

- ♦ Generally, depending on the context, private security personnel have the same powers as ordinary citizens, drawing most of their powers from the law of contract, the law of property and labour law.
- ♦ Security officers are 'authorized', for instance, to make citizen's arrests, banish trespassers and deny entry, and search personal property by virtue of their status as agents of property owners, employers and 'other powerful persons and institutions in society'.
- ♦ Apart from these legal 'tools' available to private security personnel in the performance of their duties, they also draw on their symbolic status or 'façade of power' and thus rely on public consent and compliance as well as 'public misunderstanding of the law'.

CRITICAL

Nevertheless, they are liable to face civil suits should their arrest or search prove to be incorrect.

6. Conclusion of security patrol

After every security patrol an occurrence book entry must be made. If a security breach was discovered during the patrol a security report must always be opened and if needed supported by a statement (refer to detailed discussion under point 3). Any object that is found during a patrol must be recorded in the OB and in the found property book. The object of the found property book is to record all property reported as found on company premises or in company vehicles. Property found elsewhere must be referred to the police. Entries should be serially numbered, with a line ruled immediately beneath each entry. Once an article of found property has been handed in or discovered during a patrol, brief particulars of it should be entered in this register, with the circumstances in which it was found and the name and address of the founder if the property was handed in by some one other than the patrolling security officer. Whenever property is returned to its owner an entry, giving date of return, will be made under the column heading "disposal" and the owner's signature obtained in the appropriate space. Similarly an entry will be made giving particulars of any other disposal of the property, if it is not claimed after a reasonable period.

After each shift change all security equipment must be examined to determine if they are still in working order i.e. radio's, torches etc. Found property must be handed over in accordance to company standard operating procedures. Security officers should note that they should inspect the following registers during handovers and ensure that they reflect all information on what occurred during the security shift or what was detected during security patrols;

- Occurrence Book
- Arms Register
- Lost Property Book
- Disciplinary Register
- Receipt Book
- Duty Register and Duty Rosters
- Security Instruction Register
- Visitors and Personnel Book
- Key Register
- Sick Report Register
- Telephone Message Pads
- Vehicle Register
- Standing Orders
- Phone Numbers of Senior Staff
- Fire Orders
- Alarm and Emergency Orders

Information obtained in these registers is crucial for planning and executing security patrols.

7. Dealing with found property

Property which is lost or stolen may be found and turned into a patrol officer by clients or simply just found by officers.

When this occurs every effort should be made to establish the owner. The security officer should:

- ◆ Collect the property and obtain all information from the finder. Names and addresses should also be taken from the finder to satisfy reporting requirements.
- ◆ Inspect the property for serial numbers or other identifying numbers to help determine who the rightful owner is.
- ◆ If the serial number is found the officer should record it in the lost/found register as well as the incident in the occurrence book.
- ◆ If no owner can be found the property should be turned into the property control room and complete the required reports.
- ◆ If the owner is found the security officer/control room should contact them and advise them on the procedure to pick up the property.

[illegible]

WORDS/ACRONYMS	EXPLANATION OF ACRONYMS
ASSESSMENT	“A structured process of gathering evidence and making judgments about an individual’s performance in relation to registered national standards and qualifications”
ASSESSMENT CRITERIA	It describe the evidence that is needed to show that the learner has demonstrated the outcome correctly. A list of evidence to be supplied by the candidate as proof of his / her ability to integrate all of the competencies listed earlier in the standard.
COMPETENCE	Competence is the ability to do certain things in a range of different environments with knowledge and understanding about what is being done and the effect this has on others. It includes <u>Knowledge, skills, attitudes, values and ethics.</u>
CREDIT	Each unit standard is worth a number of credits which gives an indication of the size and scope of the unit standard, the standard is worth. (1 credit = 10 notional hours of learning)
CRITICAL CROSSFIELD OUTCOMES	critical cross field outcomes is to direct educational activities towards development of the learners within a social and economic environment.
EMBEDDED KNOWLEDGE	Body of theory essential for understanding and applying the standard. Principles, methods and techniques that would underpin good practice of this unit standard.
EVIDENCE	Evidence is a set of information or observations that provides proof of the learner’s competence.
FORMATIVE ASSESSMENT	Aims to assist the learner to identify any knowledge/skills gaps when demonstrating his/her current competence. Diagnostic assessment supports learning and progress of the learner.
INTEGRATED ASSESSMENT	Integrated assessment refers to: • assessing a number of outcomes together • assessing a number of assessment criteria together • assessing a number of unit standards together • using a combination of assessment methods and instruments for an outcome/s • collecting naturally occurring evidence in the workplace • Acquiring evidence from other sources such as supervisor’s reports, testimonials, portfolio of work previously done, logbooks, journals etc.
LEARNING ASSUMED TO BE IN PLACE	Building blocks (knowledge, skill and understanding) assumed to be in place
LEARNING PROGRAM	A “learning program is a set of learning activities in which the learner will be involved in working towards the achievement of one or more outcomes.
LEVEL	Each unit standard is registered on the NQF at a particular level based on the complexity of the outcomes and stringency of the standards.
NQF	National Qualifications Framework
RANGE STATEMENTS	The range statements indicate detailed requirements of the assessment criteria.

RE-ASSESSMENT	• The same method and instrument may be used, but, the task and materials should be different • The task and materials should, however, be of the same complexity and level as the previous ones. • In case the methods and instruments are changed it must be ensured that they are appropriate for the outcomes specified.
RPL ASSESSMENT	RPL is a way of recognizing what individuals already know and can do. The basic premise underlying it is that people, especially mature adults, learn many things inside and outside the formal structures of education and training and that irrespective of where, how and when learning was acquired, subject to assessment, it can be worthy of recognition and credit.
RPL	Recognition of prior learning
SASSETA	Safety & security sector education and training authority.
SAQA	SOUTH AFRICAN QUALIFICATION AUTHORITY
SPECIFIC OUTCOMES	An outcome is a statement that describes the required competency that must be demonstrated by the learner on successful completion of a training intervention. Key performance areas in the standard are given, the focus is <i>not</i> only on current competence, but also on future competence in this standard.
SUMMATIVE ASSESSMENT	Assessment used to record the level of competence achieved by a learner over a period of time, e.g. at the end of a program, term or year.
QUALIFICATIONS	Represent a planned combination of learning outcomes which has a defined purpose and intended to provide learners with applied competence and a basis for further learning
UNIT STANDARDS	the “building blocks” of qualifications. All qualifications are plotted on the National Qualifications Framework (NQF). “A statement of the outcomes that the learner must achieve to earn credit. Standards are nationally agreed and internationally comparable.”

PURPOSE OF THE UNIT STANDARD

The person credited with this unit standard is able to conduct various types of security patrols, use security equipment and resources and identify role-players involved in a security patrol. This unit standard will enable learners to apply techniques to conduct a patrol and to identify and deal with potential and/or existing threats. They will be able to conclude the security patrol by handing over the required information, property and equipment.

A person credited with this unit standard will be able to:

- Prepare for a security patrol.
- Conduct a security patrol.
- Conclude a security patrol.

LEARNING ASSUMED TO BE IN PLACE AND RECOGNITION OF PRIOR LEARNING

Learners accessing this qualification will have demonstrated competence in:

- Communication at NQF Level 3 or equivalent.

UNIT STANDARD RANGE

Types of patrols refer to but are not limited to:

- Foot patrols, area patrol, and perimeter patrol.

UNIT STANDARD OUTCOME HEADER

N/A

Specific Outcomes and Assessment Criteria:**SPECIFIC OUTCOME 1**

Conduct a security patrol.

ASSESSMENT CRITERIA**ASSESSMENT CRITERION 1**

The purpose of conducting patrols is explained in terms of their role in security.

ASSESSMENT CRITERION RANGE

Purpose refers to deter, detect, report, react and detain.

ASSESSMENT CRITERION 2

Potential and/or existing threats are monitored and/or observed in order to minimise security risks.

ASSESSMENT CRITERION 3

Patrol techniques are applied in a given situation.

ASSESSMENT CRITERION RANGE

Patrol techniques refer to but are not limited to:

- Walking in shadows, walking behind lights and stopping and listening.

ASSESSMENT CRITERION 4

Potential and/or existing threats are assessed to determine whether they constitute an incident.

ASSESSMENT CRITERION 5

Patrol is assessed for reporting purposes.

SPECIFIC OUTCOME 2

Prepare for a security patrol.

ASSESSMENT CRITERIA**ASSESSMENT CRITERION 1**

Types of patrols are described according to when and how they should be used. Security equipment needed to conduct patrols is identified according to their purpose.

ASSESSMENT CRITERION 2

Instructions for a specific patrol are interpreted in order to inform patrol activities.

ASSESSMENT CRITERION 3

Consequences of not reporting or poor reporting are explained with examples.

ASSESSMENT CRITERION 4

Role-players are identified in terms of their roles and responsibilities.

ASSESSMENT CRITERION RANGE

Role-players may include but are not limited to management and emergency services.

SPECIFIC OUTCOME 3

Conclude a security patrol.

ASSESSMENT CRITERIA**ASSESSMENT CRITERION 1**

Gathered information is interpreted in order to compile a report.

ASSESSMENT CRITERION RANGE

- Report may include but is not limited to pocket book, occurrence book and incident report book.
- Interpretation refers to examining information who, what, where, when, why and how.

ASSESSMENT CRITERION 2

Issued equipment is examined for handing over purposes.

ASSESSMENT CRITERION 3

Found property is handled in accordance with standard operating procedures.

ASSESSMENT CRITERION RANGE

Handled refers to but is not limited to safe keeping, recording and handing over.

UNIT STANDARD ACCREDITATION AND MODERATION OPTIONS

- An individual wishing to be assessed (including through RPL) against this Unit Standard may apply to an assessment agency, assessor or provider institution accredited by the relevant ETQA.
- Anyone assessing a learner against this Unit Standard must be registered as an assessor with the relevant ETQA.
- Any institution offering learning that will enable achievement of this Unit Standard or assessing this unit standard must be accredited as a provider with the relevant ETQA.
- Moderation of assessment will be conducted by the relevant ETQA at its discretion.

UNIT STANDARD ESSENTIAL EMBEDDED KNOWLEDGE

- Use of security equipment.
- Processes and procedures for handing over and taking over responsibilities.

UNIT STANDARD DEVELOPMENTAL OUTCOME

N/A

UNIT STANDARD LINKAGES

N/A

Critical Cross-field Outcomes (CCFO):**UNIT STANDARD CCFO IDENTIFYING**

Identify and solve problems associated with the preparation, conducting and concluding of a patrol in area of responsibility.

UNIT STANDARD CCFO WORKING

Work effectively with all role players in the process of conducting of a security patrol.

UNIT STANDARD CCFO ORGANISING

Organise oneself and one's activities in such a way as to have all the required equipment and resources available before going out on a security patrol.

UNIT STANDARD CCFO COLLECTING

Collect, analyse, organise and critically evaluate information pertaining to the conducting of a security patrol.

UNIT STANDARD CCFO COMMUNICATING

Communicate effectively with others during the security patrol and when drafting a security patrol report.

UNIT STANDARD CCFO SCIENCE

Use science and technology whenever possible when conducting a security patrol.

UNIT STANDARD CCFO DEMONSTRATING

Demonstrate an understanding of the world as a set of related systems where the proper preparation leads to an effective and efficient patrol.

UNIT STANDARD CCFO CONTRIBUTING

In order to contribute to the full personal development of society at large, it must be the intention underlying any programme of learning to make an individual aware of the importance of being culturally and aesthetically sensitive across a range of social contexts while conducting a security patrol.

UNIT STANDARD ASSESSOR CRITERIA
