1: Assessors Guide

1. Instructions to Assessor

Introduction:

This assessment guide has been designed as a generic assessment guide and is intended for use by the accredited Security Industry Training Providers.

Purpose of the assessment

The purpose of summative assessment against this unit standard is to:

- ♦ Award credits to the NQF to learners who are able to Handle and defuse security related conflict

Learning assumptions

The following knowledge, skills, attitude and/or equivalent:

- ♦ A knowledge, comprehension and application of language at NQF 02.

Assessment methods

The following assessment methods will be used for the summative assessments:

- ♦ Written and/or/verbal questioning
- ♦ Product sample and on site assessment

2. Assessment Process

General

- ♦ Use the assessment guide and your latest company policies and standard operating procedures to assess the evidence received from the learner.
- ♦ Use the section: Addition Comments/Questions to note down any further comments or questions on the evidence assessed.
- ♦ Use the model answers as a guideline to assess the learner's answers to the assessment questionnaire.
- ♦ The learner can complete the assessment questionnaire orally. In this case, agree a date, time and venue.
- ♦ Provide the learner with a feedback within 10 working days of receiving the evidence.

Step 1 - Planning for the Assessment

Review this assessment guide to:

- ♦ Ensure that you understand all the requirements of the assessment in terms of evidence required to prove competence.
- ♦ Identify and prepare the learner for the assessment by:
 - ⇒ Completing the Assessment Plan with the learner to discuss and agree the details regarding the assessment.
 - ⇒ Completing the Assessment Preparation Checklist and getting the learner to sign.
- ♦ Ensure that you have familiarized yourself with the following:
 - ⇒ The use of batons
 - ⇒ The use of constraining apparatus
 - ⇒ The use of defensive sprays
 - ⇒ The use of two way radios
 - ⇒ The use of metal detectors
 - ⇒ The use of body armour
 - ⇒ The use of flash lights
 - ⇒ The standard operating procedures and policies of the company.

Step 2: Complete the Assessment

- ♦ Collect the evidence in accordance with the methods and evidence requirements specified.
- ♦ Mark each question as correct or incorrect in the “Office Use” column.
- ♦ Record the evidence on the assessment guide and indicate “Competent”, “Not Yet Competent” or “Not Assessed” for each assessment criterion. Note down any comments at the back of the assessment guide.
- ♦ Ask the learner additional questions, if necessary, to clarify points. Record these on the guide.
- ♦ All questions must be complete as per the criteria specified.
- ♦ Answers provided must be similar to the model answers.

Step 3 - After the Assessment

- ♦ Prepare the feedback by writing comprehensive, developmental feedback after each section on the Assignment Sheets. In addition to this, you are required to write a summary overall feedback on the Assessment Guide.
- ♦ Provide the feedback to the learner in a safe, undisturbed in nature.
- ♦ Ensure that your feedback is developmental and supportive in nature.
- ♦ Advise the learner on what action to follow in the event of a “Not Yet Competent” rating.
- ♦ Advise the learner on what action to take where he/she feels the need to appeal against your decision.
- ♦ Allow the learner time to provide you with feedback relevant to the process.

- ♦ Record the learner's feedback in the guide and ensure that it is given to the person responsible for the quality assurance of assessment tools.
- ♦ Ensure that the learner co-signs the assessment guide to indicate agreement with the feedback.

3. Assessment documentation required:

Step 1: Planning for the Assessment

- ♦ Assessment Plan
- ♦ Assessment Preparation Checklist
- ♦ Assessment Policy (including Appeals)
- ♦ Evidence Matrix
- ♦ Assessment Instruments

Step 2: Conducting the Assessment

- ♦ Assessor Guide
- ♦ Learner's workbook
- ♦ Summative assessment pack

Step 3: After the Assessment

- ♦ Assessment Comments
- ♦ Feedback Report

4. Specific Instructions

Please note that Part 3 Assessment Instruments are not included in this guide and are to be included by the assessor on an individual basis.

The actual summative assessments need to be completed and signed off by both learner and assessor. The assessor will take control of the completed assessment instruments and will file them under the tab for Assessment Evidence.

The completed assessment pack will be kept in safekeeping at the training provider for three months after endorsement by SASSETA and will then be returned to the learner.

Guidelines where an appeal is lodged

The normal appeal procedure prescribed by SASSETA and described by the provider's Quality Management System will be followed.

PRE-ASSESSMENT MEETING CHECKLIST

ACTION	YES/NO	COMMENTS
Set learner at ease; be friendly, polite and professional.		
Explain to the learner and agree on the following issues. 1. The unit standard that will be assessed 2. Date, time, venue and process to be followed during the assessment. 3. Summative assessment tools to be used for the assessment. 4. The assessment plan 5. Purpose of assessment		
Explain to the learner and agree on the role of all involved during the assessment process.		
Identify possible barriers and or disabilities of the learner.		
Explain the meaning and application of RPL.		
Explain, discuss and provide one complete set of the Appeals process documentation.		
Explain to the learner when final results will be available and how feedback will be provided.		
Discuss previous assessment results if applicable.		

I, _____ (initials and surname of learner), DECLARE THE FOLLOWING:

A copy of the unit standard(s) involved has been given to me prior to this meeting. I know I will be assessed against the criteria, which have been set to the applicable unit standards. The criteria have been discussed with me, and the procedures and purpose of the assessment has been clearly explained to me.

I am well aware of the venue, date and time that I will be assessed. I consider the period of time given to me to prepare myself for the assessment to be fair.

I understand clearly that I have the right to appeal against any decision made by the assessor during the assessment of the evidence provided by me, and that I have free access to the appeals procedures attached to this assessment pack. I understand that I have the right to be accompanied by another person during all procedures, and that I have free access to the Training Division of SBV'S Health and Safety Procedures- filed at the offices.

3: Assessment Evidence

Assessment Instruments

The assessment instruments included in this assessment pack are all summative assessment instruments and are to be read in conjunction with the formative assessment instruments contained in the learner workbook. Both formative (workbook) and summative assessments are to be retained as part of the learner's portfolio of evidence.

A number of the assessment instruments contained in this assessment are workplace knowledge based questions.

This means that you will arrange with the learner, a time that is suitable, during which the learner will complete each questions.

QUESTION 1: Identify each type of baton by completing the attached diagram.

- [1] Tonfa
- [2] Front head
- [3] Handle
- [4] Blade
- [5] Back head

Requirements achieved	YES	NO
Comments in support of decision		

QUESTION 2: The learner needs to provide proof for the use of the baton.

Demonstrate the grip on each of the type of batons.

Straight baton		Yes	No	Comments
Did the learner:				
1.	Put the wrist strap around his wrist.			
2.	Grip the baton on the hand grip			
3.	Grip the baton firmly			
4.	Play with or mis-use the baton			

Requirements met		
-------------------------	--	--

Tonfa		Yes	No	Comments
Did the learner:				
1.	Grip the baton on the hand grip			
2.	Grip the baton firmly			
3.	Play with or mis-use the baton			

Requirements met		
-------------------------	--	--

Comments in support of decision

QUESTION 3: The learner needs to provide proof for the use of the baton.

Demonstrate defensive maneuvers with the tonfa.

<u>Raising block:</u>		Yes	No	Comments
Did the learner:				
1.	Raise the baton well above his head on a 45 degree angle.			
<u>Lower section block:</u>				
1.	Swiftly sweep his arm down across and past his body line.			
<u>Inner forearm block:</u>				
1.	Swing his/her arm across the front of his/her body using an outside in motion.			
<u>Outer forearm block:</u>				
1.	Swing his/her arm out and across his/her body using an inside out motion.			
<u>Cross block:</u>				
1.	Swing both batons out in front of him/her and form a cross shape to block and temporarily trap the incoming strike.			
Requirements met				

Comments in support of decision

QUESTION 4: The learner needs to provide proof for the use of the baton.

Demonstrate defensive maneuvers with the straight baton

<u>High block</u>		Yes	No	Comments
Did the learner:				
1.	Using the two-handed carry position			
2.	Raise the baton up in front of the body until the long portion is above and in front of the forehead.			
3.	Position the support hand, with fingers open, behind the long portion of the baton as the object is blocked			
<u>Middle block</u>				
1.	Using the two-handed carry position			
2.	Move the baton to the middle of his/her body at a 45-degree angle.			
3.	Keep the long portion pointing up and slightly forward of the grip portion that is pointing down.			
4.	Position the support hand, with fingers open, behind the long portion of the baton as the object is blocked.			
<u>Low block</u>				
1.	Swing his/her arm across the front of his/her body using an outside in motion.			
2.	Move the baton to the middle of his/her body at a 45-degree angle.			
3.	Move the baton horizontally down in front of the body to just below your groin.			
4.	Position the support hand, with fingers open, behind the long portion of the baton as the object is blocked.			

<u>Strong-side block.</u>		Yes	No	Comments
Did the learner:				
1.	Using the two-handed carry position			
2.	Move the baton vertically toward the strong side			
3.	Position the support hand, with fingers open, behind the long portion of the baton as the object is blocked			
<u>Forward strike</u>				
1.	Using a one-hand carry position			
2.	Quickly move the baton across the body from his/her strong side to the support side.			
3.	Keep the palm facing up as he/she deliver the counter-strike technique horizontally or downward diagonally.			
<u>Reverse strike</u>				
1.	Using a one-hand carry position			
2.	Quickly move the baton across the body from his/her strong side to the support side.			
3.	Keep the palm facing down as he/she deliver the counter-strike technique horizontally or downward diagonally.			
<u>Front jab</u>				
1.	Using a one-hand carry position			
2.	Thrust the long end of his/her baton forward using both the strong and support hands.			
3.	Thrust the baton forward horizontally and slightly downward			
<u>Rear jab.</u>				
1.	Using a one-hand carry position			
2.	Thrust the long end of his/her baton to the rear using both the strong and support hands.			
3.	Thrust the baton rearwards horizontally and slightly downward			

<u>Strong-side horizontal strike.</u>		Yes	No	Comments
Did the learner:				
1.	Using the two-handed carry position to rotate your baton horizontally.			
2.	Pull back with the support hand as he/she with their strong hand drives the grip portion or the grip end forward toward the target.			
3.	Thrust the grip end or grip portion horizontally, while using both the hands and the strong-side hip to generate power.			
<u>Support-side horizontal strike.</u>				
1.	Using the two-handed carry position to rotate your baton horizontally.			
2.	Pull back with the strong hand as he/she with their support hand drives the grip portion or the grip end forward toward the target.			
3.	Thrust the long end or long portion horizontally, while using both the hands and the strong-side hip to generate power.			
<u>Middle strike.</u>				
1.	Using the two-handed carry position to sharply thrust the long portion of the baton forward horizontally.			
2.	Extend both of arms at the conclusion of the forward thrust.			
3.	Use the entire body to generate power.			
Requirements met				

Comments in support of decision

QUESTION 5: Explain in your own the safety guidelines in the use of batons and Tonfa's.

- Do not swing your baton around. Chances are that you might hit an innocent bystander.
- Make sure to carry your baton in such a manner that it cannot be taken from you and used against you.
- Exercise care when entering and existing vehicles as the baton might damage other equipment inside the vehicle.
- Do not hit hard surfaces with the baton as this might cause the baton to break and the pieces might hurt yourself or bystanders. The impact created when hitting a hard surface might cause injury to your arm, hand and wrist.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

QUESTION 6: Explain in your own words what is a handcuff. Motivate your answer by providing examples of two distinct subtypes of contemporary metal handcuffs.

They comprise two halves, linked together by a chain or hinge. Each half has a rotating part which engages with a ratchet which is closed around a person's wrist. Without the key, the person cannot move their wrists more than a few centimeters (inches) apart, making many tasks difficult or impossible. This is usually done to prevent suspected criminals from escaping police custody.

There are two distinct subtypes of contemporary metal handcuffs:

- one in which the cuffs are held together by a short chain,
- and another, of more recent origin, which uses a hinge for this purpose.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 7: Demonstrate the correct use of handcuffs by handcuffing a person.

The assessor will provide a role player for the purposes of the role play.

<u>Compliant suspect</u>		Yes	No	Comments
Did the learner:				
1.	Tell the suspect to turn and face away from him, spread his feet apart until he tell him to stop, and point his toes out. (The suspect's feet should be more than shoulder width apart.)			
2.	Tell the suspect to lock his elbows and move both arms back along his side until both arms are fully extended behind him, keeping his elbows locked.			
3.	Tell the suspect to turn both hands until his palms are turned outward, with his thumbs pointing up, and bend forward at the waist until told to stop. The suspect should be bent at the waist at least a 45-degree angle.			
4.	Tell the suspect not to move			
5.	Shuffle up to the suspect, staying out of arms reach, and tap one of the suspect's hands. At the same time, move back and be ready to respond to resistance by the suspect.			
6.	Take out your handcuffs using your strong hand, and position them in a proper carry position.			
7.	Approach the suspect carefully, from the outside, at a 45-degree angle.			

<u>Compliant suspect</u>		Yes	No	Comments
Did the learner:				
8.	Use the support hand to grasp the back side of the suspect's hand at the knuckles where fingers meet.			
9.	Pull the suspect's hand back away from his body. Position the center of the single strand of the bottom handcuff on the suspect's handcuffing notch at the base of his thumb, and push the handcuff on using one smooth motion.			
10.	Ensure that the cuff is snug, then instantly release the reverse handshake grip and move the support hand to grip the suspect's second hand in a handshake grip at the knuckles where the fingers meet the hand.			
11.	Grip the suspect's second hand, then instantly position the top cuff over the suspect's handcuffing notch at the base of the thumb and push the cuff on with one smooth motion.			
Requirements met				

Comments in support of decision

QUESTION 8: Explain in your own the safety guidelines when using handcuffs.

- Handcuffs (especially the type used by security officers) have one shortfall: the keys are interchangeable. This means that if the arrested person has handcuffs keys, he can easily free himself and escape.
- A suspect's hands should always be cuffed behind his back making use of the double lock function of the cuffs. The double lock function requires more than one action with the key before the ratchet will be released.
- Never handcuff a suspect to your person. As you have seen in the movies it is possible for him to overpower you, injure you and escape.
- If you carry a firearm, make sure that it is out of reach of the suspect at all times, especially while placing or removing the cuffs.
- They are called handcuffs for a reason - do not use them as leg or ankle cuffs, and don't ever handcuff a hand to an ankle!
- Never handcuff two or more suspects to each other. This creates a security risk as well as a risk of injury to the suspects.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

QUESTION 9: Explain in your own words the pre-shift check that needs to be done on handcuffs.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 10: Define defensive spray.

Pepper spray (also known as OC spray (from "Oleoresin Capsicum"), OC gas, capsicum spray, or oleoresin capsicum) is a lachrymatory agent (a chemical compound that irritates the eyes to cause tears, pain, and even temporary blindness) that is used in riot control, crowd control, and personal self-defense, including defense against dogs and bears.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 11: List the effects that defensive spray will have when it is used against a suspect.

To achieve the desired effects, a defense spray must be aimed towards the face of the aggressor. The general effects of most defense sprays are

- Disorientation
- eyes slamming shut
- restricted breathing
- uncontrollable coughing
- Blindness
- and intense burning sensation.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 12: Demonstrate the correct use of defensive spray.

The assessor will provide the defensive spray.

<u>Compliant suspect</u>		Yes	No	Comments
Did the learner:				
1.	Remove and the safety cap			
2.	Aimed at the eyes.			
3.	Spray and run			

Requirements met			
-------------------------	--	--	--

Comments in support of decision

QUESTION 13: Explain the storage procedure for defensive spray.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 14: Demonstrate the care and maintenance of defensive sprays.

		Yes	No	Comments
Did the learner:				
1.	Ensure that the safety seal, which indicates whether the trigger has been activated, is still in place.			
2.	Make sure that the pouch is not damaged in any way.			
3.	Check for visible sign of damage to the canister, trigger and safety seal.			
4.	If the seal has been broken, the trigger or pouch damaged or it feels very light, refuse to accept it and request a new canister.			
Requirements met				

Comments in support of decision

QUESTION 15: List the operating rules when using a radio.

- Listen out before speaking to ensure that the frequency is clear and do not cut in on other transmissions. Allowance must be made for transmission where you can hear only one of the participants in a conversation.
- Observe short pauses between phrases and at the end of a conversation to allow for break-in-working. The press-to-talk (PTT) switch or the voice-operated switch (VOX) must be released when pausing.
- Answer all calls immediately and in the correct sequence.
- Ensure that the radio set returns to receive after each transmission. A jammed PTT switch will reduce a good net to a state of chaos.
- To utilise circuit time more efficiently, all messages or their substance must be written down prior to transmission. Those messages which must be delivered by the receiving operator to another person or which are preceded by the pro-word "MESSAGE" must be written down.
- Transmission via radio should be clear with a natural emphasis on each word and should be spoken in natural phrases, not word by word.
- if this procedure is followed, no complaints can result
- When it is necessary for a station to initiate test signals, either for the adjustment of a transmitter, before making a call, or for the adjustment of a receiver, such signals will not continue for longer than 10 seconds, and will consist of spoken numerals (1,2,3, etc) followed by the call sign of the transmitting station.
- The station that begins the transmission must also terminate it.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 16: This is a role play exercise:

- ♦ Ask a co-learner to help you practice the phonetic alphabet.
- ♦ Write down the following sentence on a piece of paper and keep it with you: THE QUICK BROWN FOX JUMPS OVER THE LAZY DOG'S BACK
- ♦ Practice spelling the sentence (that contains all the letters of the alphabet) using the phonetic alphabet.

		Yes	No	Comments
Did the learner spell the following correct.				
1.	Tango			
2.	Hotel			
3.	Echo			
4.	Quebec			
5.	Uniform			
6.	India			
7.	Charlie			
8.	Kilo			
9.	Bravo			
10.	Romeo			
11.	Oscar			
12.	Whiskey			
13.	November			
14.	Foxtrot			
15.	Oscar			
16.	X-ray			

		Yes	No	Comments
Did the learner spell the following correct.				
17.	Juliet			
18.	Uniform			
19.	Mike			
20.	Papa			
21.	Sierra			
22.	October			
23.	Victor			
24.	Echo

26.	Tango			
27.	Hotel			
28.	Echo			
29.	Lima			
30.	Alpha			
31.	Zulu			
32.	Yankee			
33.	Delta			
34.	October			
35.	Golf			
36.	Sierra			
37.	Bravo			
38.	Alpha			
39.	Charlie			
40.	Kilo			

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 17: Role play

- ♦ You are stationed at a remote (far away) site, where the radio reception is not very good. You are on duty alone, and notice that there are about two hundred people marching towards the gate with placards. It seems as if they may be on strike and are going to force their way on to the premises.
- ♦ Practice “sending” a radio call explaining the details and requesting assistance.
- ♦ You will have to get another radio operator to relay your message, as “Control” cannot hear you properly.
- ♦ Change places with your co-learner. You are now “Control”, and the co-learner is sending the message.
- ♦ Send a multiple call for backup.
- ♦ Remember to spell out the address using the phonetic alphabet. Your transmission can include made-up codes for certain situations. Your call should include the items on the checklist below.

		Yes	No	Comments
Did the learner:				
1.	Use his call sign to identify himself			
2.	Say “Over” at the end of a sentence			
3.	Say “Out” at the end of a transmission			
4.	Say “Roger “ when confirming something			
5.	Send a “Sitrep” – a situation report			
6.	Begin his transmission with PAN-PAN			
7.	Begin his transmission with MAYDAY			
8.	Tell the receiving station its signal strength			

		Yes	No	Comments
Did the learner:				
9.	Ask the receiving station to "Say again" when something was not clear			
10.	Say "Standing by" while waiting for a reply			
11.	Say "Over and out" at any time			
12.	Ask the receiving station to "Relay to" during bad reception			

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 18: Identify at least 5 critical areas of a two way radio that needs to be inspected during a hand over of a shift.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

QUESTION 19: Explain the difference between a handheld metal detector and a walk-through metal detector.

The hand-held metal detector is a battery operated, lightweight device used to sense the presence of objects made of any type of metal. This device is light and portable and can be used with ease at any location on a site.

The walk through metal detector is an electronic operated device which typically are used in a variety of environmental conditions and can be used both indoors and outdoors to sense the presence of objects made of any type of metal.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 20: Demonstrate the correct use of a handheld metal detector during a search.

		Yes	No	Comments
Did the learner:				
1.	Make sure that the hand held metal detector is in working order.			
2.	Move the hand held metal detector + 20mm (2cm) from the body or item.			
3.	Made sure that the person face the security officer when the search is being done.			
4.	Start with the headgear and hair by moving the detector from the left side over the crown of the head to the right side of the head.			
5.	Move the detector from the collar and shoulders down the front of the person to the waist on the left side then from the shoulder to the waist down the right side. Repeat at the back.			
Requirements met				

Comments in support of decision

QUESTION 21: Demonstrate how to use the handheld metal detector by scanning from behind.

		Yes	No	Comments
Did the learner:				
1.	Stand behind person to be searched and instruct the person to assume a position with arms out-stretched to their sides, palms out parallel with the floor/ground, legs spread out with feet shoulder width apart.			
2.	Place side of wand, regardless of left or right, at the top of their head, maintaining a distance of one to two centimeters from the body			
3.	Scan over each side of their head, then sweep from neck down the center of the back to the waist and buttocks, scanning to the sides of their waist and back up to the shoulder (both sides), work your way from top of one shoulder outwards to the extended hand.			
4.	Go out past the fingertips and return under the hand, scanning the underside of the arm (pay attention to alerts on watches/jewelry on wrists).			
5.	Sweep inwards to the armpit, and continue downwards to the foot. At the foot ensure that you scan across the outmost upper side of the shoe.			
6.	Continue the scan around the heel and scan the inside top of the foot, - have them lift their foot up to scan the bottom of their foot, then sweep upwards between the legs to the crotch (Note: for dresses stop at hem or just above the knee and go down the other leg.			

		Yes	No	Comments
Did the learner:				
7.	Conduct a slower scan around the buttocks and thigh/abdomen area from front and rear			
8.	Move the detector at a speed of about 0.5 meter per second.			
Requirements met				

Comments in support of decision

QUESTION 22: Explain the legal consequences when legal guidelines are not followed correctly during the use of a handheld metal detector.

As a security officer you do not have the right to search any person without his or her consent. Using the HHMD is also regarded as a search and you will need the person's permission to search them.

Should the HHMD show that there is a metal object on the person, you may not remove it yourself. Ask the person to explain the object and to remove it if you believe it is necessary.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 23: Discuss the two types of body armor. Complete the diagram attached to motivate your understanding of the types of body armor.

Two big groups of body armors can be established:

- the set used by law enforcement officers
- and the sets used by the Army

Among the first group, there are different types of body armor characterized by increasing protection power. The classification is not easy, due to the large number of available ammunition calibers and the variations among similar caliber cartridges.

Type I	Minimum level of protection.
Type IIA	Protects from lower velocity 9 mm and 40 S&W ammunition.
Type II	Protects against high velocity 357 Magnum and higher velocity 9 mm ammunition.
Type IIIA	Protects from high velocity 9 mm and 44 Magnum ammunition. Not recommended in hot or humid climate.
Type III	Protects against 7.62 mm Full Metal Jacketed (FMJ) bullets.
Type IV	Protects against .30 caliber armor piercing (AP) bullets.
Special type	No standard custom made, it is be based in any of the standards with addition for special requirements.

Requirements achieved	YES		NO	
Comments in support of decision				

QUESTION 24: List two benefits for wearing body armor.

- Body armor saves lives. According to industry estimates, more than 1,200 officers have been saved from death or serious injury because they were wearing their armor. This figure includes lives saved and serious injury avoided from assaults and accidents as well as from ballistic threats.
- Body armor offers flexibility to the wearer in a number of ways:
 - ⇒ It is available in various levels of protection to accommodate the range of ballistic threats facing wearers (including street assaults and the officers' own weapons and ammunition).
 - ⇒ It can be worn as a concealable undergarment; incorporated into a uniform shirt, vest, coat, or other type of outer garment; or worn over the uniform and easily recognizable (such as armor worn by special tactical teams).
 - ⇒ Many models are available in a variety of coverage's, some armor panels cover the front and back of the torso, while others also wrap around the sides.
 - ⇒ Ballistic panels can be removed from the carrier on some models so the carrier can be thrown into the washing machine. Many different types of carrier materials are available.

Requirements achieved	YES		NO	
-----------------------	-----	--	----	--

Comments in support of decision

QUESTION 25: Demonstrate the care and maintenance of body armor.

		Yes	No	Comments
Did the learner:				
1.	Ensure there are no tears in the canvas material of the vest			
2.	Check the metal rivets are securely in place and have no tears around them.			
3.	Check for visible signs of wear and tear, cracks and breakages on the ceramic plates			
4.	Refuse to re-use it if it has been punctured by a bullet			
5.	Refuse to accept faulty equipment			
Requirements met				

Comments in support of decision

QUESTION 26: Demonstrate the correct use of a flash light.

		Yes	No	Comments
Did the learner:				
1.	Took the flashlight in the non-firing hand.			
2.	Grasped it with the pinkie finger near the lens and the thumb near the rear of the light. The index finger will turn the light on and off.			
3.	When shining the light, hold it over the shoulder, up and away from the body.

QUESTION 27: Explain the mayor difference between a battery-operated and a re-chargeable flash light.

Non-rechargeable flashlights don't use ordinary AA, C, and D size alkaline batteries. They use 123A lithium batteries because of their multiple advantages over alkalines:

- ♦ longer shelf life (10 years), higher
- ♦ power density, higher unit voltage (3 volts), lighter
- ♦ weight, better cold weather performance, and

The rechargeable batteries use time-tested Nickel-Cadmium technology. Coupled with Rapid Smart Chargers you'll get reliable performance and hundreds of charging cycles from your battery.

QUESTION 28: Demonstrate the correct care and maintenance of a flash light during a pre-shift check.

		Yes	No	Comments
Did the learner:				
1.	Check the lamp to ensure that it is working.			
2.	Check the battery for good working condition and if it is charged.			
3.	Check the general condition of the flash light.

QUESTION 29: Explain key control measures that will contribute to the control of keys.

- **Use Interchangeable or Removable Core Locks.** These will permit frequent and rapid changes without floor or shop labor. Adequate preplanning will assure that sufficient replacement cores in the various control and master groupings are on hand for immediate use. If a locksmith is on staff, as probably there will be because of the volume of lock changes and installation, much of the core preparation can be done in-house after a suitable system start by the manufacturer.
- **Do NOT Utilize Single Control or Grand Master Scheme.** The obvious danger is total compromise of the locking system through loss of loss of accountability of a control or grand master key (or code), or a single core containing the control and grand master combinations.
- **Multiple Controls and Multiple Masters.** The building can readily be divided into functionally different units. For example, the low-rise, mid-rise, and high-rise floors can be regarded as separate locking zone. Each zone can then be set up to its own control and its own master scheme.
- **Multiple Key Blanks.** In setting up different control and master schemes for major building elements, it is urged that the key blank style (the profile of the key and keyway) be different for each of them so that a blank for use in one element will not enter the keyway in the other elements. This will avoid unauthorized key use and discourage attempts at it. It would also make the lock combination codes used in one sector available for use in another with low risk of compromise inasmuch as the key blanks would not be interchangeable.
- **Arrangements With Single Zones.** Any of the customary approaches of distinction by floor or occupancy or both will serve. For example, if the mid-rise is a tenant section, then each of the floors could be provided a separate floor master and all floors included in a zone grand master. At the same time, spaces within the tenant zone which were not for tenant use, such as the maintenance spaces, could remain on separate master systems which were building-wide but confined to a special function such as electrical, mechanical, or janitorial.
- **Strict Master Key Control.** Master keys at the floor level should be issued on an accountable basis and only to senior personnel of single tenant occupants. If several tenants occupy a single floor, none should have a floor master. Floor masters issued on this basis should be changed after changes in occupancy as well as at the other indicated change intervals.
- **Grand Master Keys.** These should be issued on a daily basis only, and only to the fewest number of persons with demonstrated imperative need. Using multiple grand masters will reduce vulnerability to compromise but obviously not eliminate it. Issuing grand master keys on a “day basis” only, i.e., to be

returned to security custody prior to departure from the structure by the holder, will further limit exposure. Choosing very carefully those issued grand master keys (or even allowed temporary custody of them) will narrow the exposure still further. It must be remembered that an impression can be made of any key, in a variety of ways, in a matter of seconds and that key can be later reproduced. It is for this reason that absolute security in conventional locking systems is unachievable.

There is a myth in general circulation that maintenance managers or central crafts people, like electricians and all around mechanics, must carry grand master keys for an entire structure to be able to perform their tasks. It is sometimes argued that security guards on patrol rounds also require grand master keys for the same reason.

A moment's analysis will show this to be a fallacy. Work schedules generally are laid out before the mechanic goes to an area. The required floor or several floor master keys could be issued based upon an approved work schedule. A zone grand master could be issued on the same basis if truly essential. It is hard to see, however, how a craftsman would require simultaneous entry capability to every door in the structure at the same time. In any event, appropriate keys to any area can be available on a 24-hour basis from the security (or maintenance) supervisor on duty and can be issued, as needed, to authorized individuals on an accountable basis. Carriage of master and grand master keys as symbols of prestige is to be actively discouraged.

- **Control Keys and Combinations.** Obviously no one needs either unless a lock core is to be replaced or a new core pinned. The locksmith will have continuing access to both of these items, so the reliability of that person is of critical importance. *Control keys should not be carried at any time except specifically when needed to make scheduled core changes.*
- **Exterior Doors.** These should not be included on any other building master or control system because they are constantly exposed to lock decoding efforts by persons outside the structure. As they are mostly on grade or below grade levels, the doors involved will typically be to specialized maintenance spaces or to public access spaces under the security control of the owner or building manager. Exterior doors which are locked against ingress to the building also require intrusion alarm protection, whether or not the lock combinations are regularly changed.
- **Lock Quality and Complexity of Combination Schemes.** Although maximum security locks are probably not generally required for high-rise structures with a balanced system of security controls, the locks chosen should be of very good quality. Interchangeable core locks which use a single tumbler (pin chamber) to set up control combinations should be avoided because of the ease of creating a control key given any operating key and a little ingenuity.

QUESTION 30: Explain what non mechanical locks refers to.

If the building utilized automated entry at any locations, there will be electro mechanical locks (card readers, digital keyboards, or some combination). If a particular door is equipped only with the electro-mechanical equipment, and not with the conventional building locksets, it will be secure against entry except via the automated entry device. On the other hand, such doors may at some time be converted to other use and be restored to the general building locking program. It is recommended that provision be included in the door for a general building lockset but that an operating core be installed only when needed. This will preserve the ability to modify that door with no skilled floor labor by merely deleting it from the automated system and installing an operating core.

QUESTION 31: Discuss the basic procedures for:

- ♦ Control of locking devices.
- ♦ Possession of locking devices.
- ♦ Control of keys.

Procedures for control of locking devices

- ♦ The Security Department/company shall control all locking devices.
 - ⇒ The Security Department shall be responsible for the issuance, installation, repair and recapture of all locking devices.
 - ⇒ The Plant Layout Superintendent shall notify the Security Manager in advance of any building construction, occupancy, or area relocation which would involve the installation, alteration, or repair of locking devices.

Procedure for possession of locking devices

- ♦ Employees may be issued locking devices, subject to the approval limitations set forth in the SUMMARY OF APPROVALS to this instruction.

Procedure for the control of keys

- ♦ Possession of Company Keys
 - ⇒ Issuance of Company keys to employees is subject to approval limitations set forth in the SUMMARY OF APPROVALS to this instruction, and requires execution of accountability receipts by employees to whom such keys are issued.
